# LETTER OF TRANSMITTAL

## FEDERAL WORKS AGENCY WORK PROJECTS ADMINISTRATION

WASHINGTON, D. C., DECEMBER 15, 1939

MY DEAR MR. PRESIDENT:

I have the honor to transmit herewith the *Report on Progress of the WPA Program* for the year ending June 30, 1939. The report supplies detailed information on the project accomplishments resulting from WPA work, the kinds of projects operated, the employment provided by the WPA, and the funds expended.

In covering the year ending June 30, 1939, the report deals with a period during which WPA operations were conducted on an expanded scale as a result of the severely limited opportunities of the unemployed to find work in the fields of private enterprise.

Respectfully,

F. C. HARRINGTON,  
*Commissioner of Work Projects*

THE PRESIDENT  
*The White House*

## PREFACE

Renamed the Work Projects Administration and made a part of the Federal Works Agency as of July 1, 1939, through Reorganization Plan No. 1, the WPA has continued to provide project work for large numbers of the country's unemployed. In covering the period prior to the reorganization, this report deals with the activities of the Works Progress Administration, as such, giving particular emphasis to the year ending on June 30, 1939. As many as 3,360,000 persons were working at the peak of the year's activities on projects operated with WPA funds and at the end of June 1939 a total of 2,550,000 persons were so employed.

This report reviews the activities of the WPA in the light of its primary responsibility—that of providing work for the unemployed on useful public projects. It summarizes the project accomplishments and operations of the WPA, the project employment provided, and the expenditures that have been made. The provisions for continuing the WPA program during the current fiscal year are outlined in the second chapter. The fourth and fifth chapters are included as illustrations of WPA project activities in particular instances. One reviews the emergency and rehabilitation work that was done in New England following the September 1938 hurricane. The other describes in some detail the normal operations of the WPA as carried on in four selected areas, indicating the nature of the accomplishments realized through the prosecution of WPA projects and the adaptation of WPA activities to local conditions and local needs. The final chapter discusses the several programs providing employment on Federal work and construction projects and public relief; the WPA program is oriented in this setting.

Essential to the preparation of this report has been the willing cooperation provided by the several administrative divisions of the WPA central office and by various of the regional and state and district offices of the WPA. The report has been prepared under the

direction of Emerson Ross, Director of the Division of Statistics; its development has been an immediate responsibility of Dwight B. Yntema assisted principally by Alice M. Atwood, Eleanor Neill, and Wilfred P. Campbell. Among the contributors to the report particular mention must be made of the following persons in the Division of Statistics: Malcolm B. Catlin and members of his Operating Statistics Section, who supplied much of the statistical information used in the report and who also assisted in the development of the related text, including B. Alden Lillywhite who carried out the preliminary work leading to the Escambia and Portsmouth sections of the fifth chapter (pages 57 to 75); Howard C. Grieves who assumed responsibility for the first chapter (pages 1-7); and Theodore E. Whiting and members of his Relief Statistics Section who supplied data for, and collaborated in the writing of, the tenth chapter (pages 129-152). Edward A. Williams of the Division of Research prepared a large share of the second chapter (pages 8-14). Data on the status and expenditure of Federal funds have been taken largely from reports prepared by the Department of the Treasury, Office of the Commissioner of Accounts and Deposits.

# REVIEW OF THE WPA PROGRAM

**M**ORE than 7,000,000 different persons were employed on WPA projects at some time between the initiation of the program in the summer of 1935 and the end of June 1939. The number of jobs provided by the WPA has varied considerably during each of the four years in which the program has operated, generally paralleling the course of unemployment over the period. Employment on the program has been expanded during periods when private employment has declined and has been contracted when the number of persons in need of WPA employment has fallen off as a result of increased employment in private industry. During the year ending June 30, 1939, an average of approximately 2,900,000 persons were at work on WPA projects; this is exclusive of approximately 100,000 persons who were employed on the projects of other Federal agencies that were financed by transferred WPA funds. As many as 3,360,000 persons had work on WPA-financed projects in November 1938 and as few as 2,550,000 at the end of June 1939.

The average number of WPA jobs provided during the year ending June 30, 1939, was higher than during each of the three preceding years of the program's operations. In the 12 months ending June 30, 1938, an average of approximately 1,900,000 persons were employed, and in the preceding year employment averaged 2,200,000 persons. The program was put into operation in the summer and fall of 1935, and in the first half of 1936 an average of 2,700,000 persons were at work on WPA projects.

Federal expenditures for the operation of the WPA program amounted to \$2,155,000,000

during the year ending June 30, 1939. Most of these expenditures (95.9 percent) were made in the operation of work projects; they include the wages paid to project workers and the costs of the materials, supplies, and equipment required for project operations. The cost of administering the program amounted to 3.4 percent of the total and expenditures for miscellaneous purposes authorized under the ERA Act of 1938 (the purchase of surplus clothing and extension of aid to self-help cooperatives) accounted for the remaining 0.7 percent. In addition to the funds used for the WPA program about \$73,500,000 of WPA funds was expended from transfers to other Federal agencies; these funds were used by them for the operation of projects similar to those conducted by the WPA.

Since the amount of funds expended by the WPA is determined by the number of jobs provided on work projects, expenditures during the fiscal year ending June 30, 1939, exceeded the expenditures of each of the three preceding years. WPA expenditures amounted to \$1,400,000,000 during the year ending June 30, 1938; \$1,800,000,000 in the preceding year; and \$1,300,000,000 in the year ending June 30, 1936, during the early months of which the program was being put into operation.

Sponsors of WPA projects provided \$493,000,000 toward the cost of WPA project operations during the year ending June 30, 1939. This represented 19.3 percent of the total cost of WPA work projects during the year. The amounts expended by sponsors for WPA projects have increased during each of the four

years the program has been in operation, differing in this respect from the trend of Federal expenditures which were lower in the year ending June 30, 1938, than in the preceding 12-month period. From the beginning of the program through June 1939, sponsors' expenditures averaged 17.0 percent of the total cost of project operations as compared with 19.3 percent during the last of the four years.

## Federal Work Programs and Public Assistance

The depression beginning in 1929 brought about an intensification of efforts at all levels of government—Federal, state, and local—to deal with the problems of economic insecurity. It soon became apparent that the origins of many of the problems of insecurity lay outside the local communities where the needs for assistance arose and that their extent was such they could not be met through use of local resources alone. As a result, state agencies and, later, Federal agencies were organized to mitigate the effects of unemployment and poverty and to promote economic recovery. In 1935 a Federal Works Program was launched, the Social Security Act passed, and Federal grants to states for general relief were discontinued. By the end of the year all of the major programs that are currently in operation had been either established or scheduled for future operation.

The extent and scope of governmental efforts to deal with the problems of insecurity are evidenced by the various programs in operation in June 1939. Over 6,600,000 different households were benefiting at that time from employment on Federal work and construction programs or were receiving public assistance. These households included approximately 19,500,000 persons.

Other security programs have been developed in addition to those providing employment on Federal work and construction projects and public assistance. Unemployment compensation programs, developed under the Social Security Act and covering most of the employed population except for agricultural, domestic, and government employees, were in operation

in all except two states in June 1939. Payments were initiated in the two remaining states in July. During the middle week of June 1939, over 800,000 persons received unemployment compensation payments. The Social Security Act likewise provided for a program of old-age insurance. Amendments to this act have made it possible to initiate these insurance payments in January 1940 and have extended the system to include survivors' benefits as well.

## Federal Work and Construction Programs

The work and construction programs financed in whole or in part by the Federal Government provide jobs and income for unemployed workers. These programs include the project work of the WPA, NYA, CCC, and PWA, and the project activities of numerous other Federal agencies that are financed by both regular and emergency appropriations.

An average of more than 3,800,000 persons were employed on all Federal work and construction programs in June 1939, including 2,600,000 persons working on projects financed with WPA funds. The student aid and work project programs of the NYA and the CCC program accounted for 490,000 and 270,000 employees, respectively. Practically all of these were young persons, 24 years of age or younger. PWA projects provided jobs for nearly 240,000 workers of whom more than four-fifths were employed on non-Federal projects involving public construction in the financing of which state and local governments were assisted through PWA loans and grants. Federal projects conducted directly by Federal agencies with PWA funds accounted for the remaining employment under the PWA program. The regular construction activities of the Federal Government provided jobs for an additional 240,000 workers in June 1939.

More than half of all the employment on Federal work and construction programs has been provided through the WPA since the end of 1935 when the program reached full development. In June 1939, the 2,600,000 persons working on projects financed with WPA funds accounted for two-thirds of the total of 3,800,000 persons then employed on all Federal work

WPA BRIDGE CONSTRUCTION IN PROCESS IN UP-STATE NEW YORK

and construction programs. The proportion represented by WPA workers has been largest during periods of relatively high levels of unemployment and smallest when unemployment has declined. In the summer of 1938, for example, WPA employment accounted for a maximum of almost 80 percent of the total number employed on all Federal work and construction programs, whereas in the fall of 1937, when unemployment was at a relatively low level, the WPA accounted for somewhat less than 60 percent of all the Federal project employment provided.

### Public Assistance Programs

Public assistance programs for the care of the needy aged, dependent children, and the blind are carried on by state and local governments with financial assistance from the Federal Government. For these programs Federal funds are made available under the Social Security Act to states having approved plans. Federal participation in providing public assistance also takes the form of subsistence grants to needy farm families. Public assistance in the form of general relief for destitute persons not provided

for under other programs, however, has in recent years been a responsibility of state and local governments; Federal funds have not been made available for this type of aid since the discontinuance of FERA grants in 1935.

The special categories of public assistance in which the Federal Government participates under the Social Security Act included, in June 1939, 1,845,000 recipients of old-age assistance, 311,000 families receiving aid for dependent children, and 68,000 recipients of aid to the blind. State and local agencies in that month provided general relief for a total of 1,568,000 families and single persons. These agencies also distributed surplus agricultural commodities made available by the Federal Surplus Commodities Corporation and clothing and other articles produced in WPA sewing rooms. Subsistence grants made by the Farm Security Administration to needy farm families numbered 69,000 during June 1939.

### The WPA Program

The WPA operates the principal program of project work designed and administered for the employment of unemployed workers. As such,

its primary objective is one of supplying jobs on useful public projects to unemployed persons until private industry is able to reemploy them. In keeping with this purpose, the program is organized to provide, with the funds available, the maximum number of jobs consistent with the skills of the unemployed, to operate projects yielding substantial benefits in the form of public improvements and services, and to integrate its operations as closely as possible with the labor market.

### Cost of Employment Provided

To provide the maximum number of jobs with the funds appropriated, the WPA has used most of its funds in making wage payments to project employees. WPA workers are paid in accordance with an established schedule of earnings which determines the amount each worker receives during a month. Scheduled earnings vary according to the geographical area and the concentration of population in each county where the work is done and according to the skill required for the assigned work. The actual earnings of WPA project workers throughout the country averaged about \$53.50 per month during the year ending June 30, 1939.

Federal funds are made available for project costs other than wages, but only to the extent that they are necessary to assure the operation of worthwhile projects by supplementing the materials, supplies, and equipment which it is incumbent on project sponsors to supply. Under the terms of the ERA Act of 1938, nonlabor expenditures from Federal funds in any state were limited to a maximum of \$7 per worker per month.

### Assignment of Workers

In order that operation of the WPA projects will have a maximum effect in relieving distress caused by unemployment, the WPA requires that at least 95 percent of the persons assigned to its projects in each state be certified as in need of relief. State and local relief agencies designated by the WPA are responsible for referring unemployed persons to the WPA. During the year ending June 30, 1939, almost

97 percent of the persons employed on WPA projects were certified as in need of relief; the remainder—about 3 percent of the total—represented certain types of skilled, technical, and supervisory personnel required for the successful operation of projects but not available among the persons referred to the WPA by state and local relief agencies.

### Unemployment as a Determinant of WPA Employment

The volume of unemployment and resulting need is changing constantly in each section of the country. Changes, affecting large numbers of persons, have, at times, occurred with great rapidity. To be successful in this setting, a work program must be able to expand rapidly when unemployment and need increase and to contract as unemployment and need decrease. Consequently, a high degree of flexibility is necessary to the operation of the work program conducted by the WPA.

The abrupt increase in unemployment—amounting to about four million persons—which took place in the months following September 1937 is, perhaps, the most striking illustration of the dynamic aspects of the unemployment problem. To meet the resulting increase in need, WPA employment was expanded at an average rate of almost 150,000 persons per month over a period of a year. From 1,450,000 in October 1937 the number employed on WPA projects rose to over 3,250,000 by the end of October 1938. In some highly industrialized areas where the unemployment problem was much more acute than in the country as a whole, WPA operations were more than trebled in less than six months.

Adjustment of the level of operations in each section of the country in accordance with changes in the extent of need resulting from unemployment is a continuous process in the administration of the WPA program. The primary determinant of the need for WPA jobs is, of course, the number of persons who are unable to secure private employment. Various considerations, however, modify the relationship between the total number of unemployed and the number of jobs provided by the WPA. Among these are the seasonal increases in need

which appear in the winter months not only because of curtailment of outdoor construction activities and agricultural work but also because of increases in the subsistence requirements of families during the cold months of the year. Similarly the extent of need in rural areas is not adequately shown by the conventional measures of unemployment. Likewise, not all of the unemployed persons are eligible for WPA work: some are in families where another member has been assigned to a WPA project; others are eligible for unemployment compensation benefits; and still others, constituting a considerable number of the unemployed, live in families where some other member has a private job supplying the family with income sufficient to meet living costs.

Although these and many other factors modify the relationship between total unemployment and the need for WPA jobs, the movements in unemployment and WPA employment have generally paralleled each other rather closely ever since the program reached full development early in 1936. A noticeable difference between the two appeared in the fall of 1936 when the assignment of large numbers of emergency drought workers caused a temporary increase in WPA employment in the drought states at a time when general unemployment was decreasing. (Unemployment estimates for the period January 1936 to June 1939 are shown in Chart 1.) The movements of unemployment and WPA employment deviated temporarily in the summer and early fall of 1937 when the amount of funds available for the operation of the program made it necessary to decrease WPA employment at a much faster rate than unemployment was dropping. Another divergence appeared in the second half of 1938 when the needs of the unemployed for WPA work continued at a high level for some months after unemployment reached its peak in June 1938. The continued rise in WPA employment after June 1938 is attributable in part to the fact

that many persons who had lost their jobs prior to that time relied for a while on unemployment compensation payments, savings, and other resources. Continued failure to find new employment made it necessary for many to apply for assistance. Other factors were also operative. Almost half of the increase in WPA employment from July through October occurred in the southern states where the income realized from the cotton crop was so small that it became necessary to provide temporary employment for several hundred thousand laborers and tenant farmers. In addition, the devastating hurricane that struck New England in September 1938 occasioned the employment of thousands of emergency workers in order to carry out the rehabilitation and reconstruction that was made necessary by the hurricane and floods. Although WPA employment continued to expand for some time after the peak had been reached in unemployment its subsequent decline during the spring and early summer of 1939 was more rapid than the drop in unemployment then taking place.

### Labor Turnover and the Return of WPA Workers to Private Employment

The WPA program is administered not only to distribute its employment most effectively in terms of need arising out of unemployment,

but also to facilitate the reemployment of its workers in private industry. Persons employed on WPA projects must maintain active registration with the public employment agencies designated by the United States Employment Service. The regulations of the WPA require that bona fide job offers from private employers providing reasonable wages and working conditions must be accepted by project workers and, at the same time, provide that a WPA employee who leaves a project job to accept private employment be promptly reassigned to WPA work if the private job proves to be of short duration through no fault of the worker and if the worker is still in need.

Evidence of the close integration of the program with unemployment conditions and the trend of private employment is to be observed in the extent of labor turnover on WPA projects. The net decline in employment over the year ending June 30, 1939, does not measure the total number of persons who left the program. During the 12 months 2,400,000 persons were actually added to the WPA program; these included 1,050,000 who had never before received WPA employment. The decline in WPA employment in the face of 2,400,000 assignments is accounted for by the fact that a total of about 2,800,000 workers separated from WPA jobs during the same year. Of these, over 1,500,000 separated voluntarily, chiefly to take private employment.

The labor turnover that is present in the WPA program has noteworthy implications. It means that the individuals employed on work projects are a constantly changing group. The extent of turnover is the primary factor influencing the duration of the employment of WPA workers. A survey to determine the length of continuous employment on WPA projects conducted in February 1939 revealed that 70 percent of the persons then employed by the WPA started their project work during the depression period beginning in October 1937. Only 17 percent had been employed continuously for three years or longer. The average duration of continuous employment for all persons on projects at that time was slightly more than one year, although the program had been in operation about three and a half years. Because of gradual changes in the composition of the unemployed population it-

self, it is necessary each month for the WPA to assign persons who have never previously been employed on WPA projects. By June 1939, as noted above, over 7,000,000 different persons had at one time or another been supplied with employment on WPA projects.

## WPA Projects

Practically all WPA-operated projects have been initiated and sponsored by state and local public agencies. Such Federally-sponsored projects as the WPA has operated have never accounted for more than a very minor share of WPA activities; they have been of even less importance following the passage of the ERA Act of 1939 which prohibited the prosecution of WPA-sponsored projects. Sponsorship of projects by the communities in which the work is conducted assures that the project work is in accord with the expressed needs of the communities. The influence of local conditions also appears in the operation of projects that are in keeping with the occupational abilities of the workers provided with WPA employment in the communities.

To receive approval for WPA operation projects must be publicly sponsored and involve useful work, the benefits of which accrue to the public. Projects for work which would displace persons normally employed by the sponsor are not eligible for approval under the regulations of the WPA. Among other factors given consideration prior to the approval of a project is the share of the costs, particularly the nonlabor costs, that is assumed by the sponsor.

A large reservoir of approved projects is constantly maintained from which appropriate work can be selected for operation in order that conditions arising from the changing employment situations in the various communities can be immediately met. The projects selected from the reservoir of approved projects and placed in operation in response to the varying needs of individual communities have covered widely diverse activities. Road and street improvements have been undertaken in all parts of the country. The erection or renovation of public buildings, the extension of sanitation and water supply facilities, and the development of parks and playgrounds have

been prominent among the other construction activities. Nonconstruction work has varied from sewing room operations and housekeeping aide projects to health, research, and educational activities.

### Physical Accomplishments

The employment of WPA workers on projects selected for their conformity to local needs as well as their suitability to the work abilities of the unemployed has resulted in significant improvements and additions to the public facilities and public services throughout the country. Because road and street work has been particularly appropriate for prosecution under a program whose objective is to furnish jobs to the maximum number of workers among whom unskilled workers predominate and because of the marked need for better roads and streets in many sections of the country, the accomplishments in this type of activity have been especially outstanding. In the past year alone (12 months ending June 30, 1939) improvement or new construction work was completed on about 111,000 miles of highways, roads, and streets. A large share of the completed mileage is represented by the road work done in rural areas.

During the same year 6,400 new public buildings were completed. These buildings vary in type according to the specific needs of the sponsoring community. They include many schools, administrative buildings, municipal or county garages, and gymnasiums and smaller numbers of hospitals, armories, fire houses, and aircraft hangars. Besides the new buildings, over 600 buildings were enlarged by the addition of new wings, such as the addition of new classrooms or a library to a school; and improvements, often involving major alterations, were made to 17,000 existing structures.

Important contributions have also been made to the water supply and sanitary facilities of the various municipalities of the country. Usually this work involves the extension of sewer systems and the construction of disposal plants, or the laying of water mains and the construction of reservoirs to supplement or replace existing facilities. Occasionally, however,

ABOUT A FIFTH OF THE NEW BUILDINGS ERECTED BY THE WPA ARE SCHOOLS—THIS ONE IS IN CALIFORNIA

an entire water distribution or sewerage system has been installed through WPA operations in towns which have previously had no such facilities. In the field of recreational facilities, WPA workers completed in one year the development or improvement of approximately 2,000 parks covering about 100,000 acres, and built hundreds of athletic fields, playgrounds, tennis courts, swimming pools, and facilities for other sports. Flood and erosion control work and conservation activities have been extensive in certain sections of the country.

In addition to the work in the construction field, which has always predominated in the WPA program, many types of nonconstruction work have been undertaken. Sewing room operations have produced millions of garments for distribution to needy families. Other services of particular benefit to the welfare of low-income or needy families are the lunches served to school children and housekeeping aid provided at times when the usual homemaker is incapacitated. Health measures promoted by WPA activities include dental and medical clinic work, immunizations against prevalent diseases, and steps taken towards the destruction of mosquitoes and other disease-spreading agents. Through education programs well over a million adults have learned to read and write and many foreign-born persons have received assistance in qualifying themselves for citizenship. Altogether these and other items of work represent a substantial increment to the national wealth.

# PROVISIONS FOR THE WPA PROGRAM DURING THE FISCAL YEAR 1940

CONGRESSIONAL action caused major changes in the WPA program at the beginning of the new fiscal year on July 1, 1939. Some of the changes were required by provisions contained in the Emergency Relief Appropriation Act of 1939 which appropriated funds for continuing WPA activities during the fiscal year. Among the more important provisions affecting the program of the WPA are those which determine the levels of employment during the year, the conditions under which relief workers can be employed and paid, the sizes and kinds of projects that may be operated, and the contributions required of project sponsors. Additional changes resulted from Reorganization Plan No. 1, which was prepared by the President in accordance with the Reorganization Act of 1939. When the plan went into effect on July 1, 1939, it grouped the WPA along with other public works agencies under a newly established Federal Works Agency. In discussing the provisions for continuing the WPA program in the new fiscal year, selection is made from relevant matter contained in the reorganization plan and the appropriation act.

## WPA Placed in the Federal Works Agency

The new Federal Works Agency, as explained by the President in transmitting Reorganization Plan No. 1<sup>1</sup> to Congress, was to include "those agencies of the Federal Government dealing

with public works not incidental to the normal work of other departments, and which administer Federal grants or loans to state and local governments or other agencies for the purposes of construction." Grouped with the Works Progress Administration (renamed the Work Projects Administration) in the newly created Federal Works Agency were the Bureau of Public Roads of the Department of Agriculture, the Public Buildings Branch of the Procurement Division of the Treasury Department, the Branch of Buildings Management of the National Park Service of the Department of the Interior (so far as it was concerned with public buildings which it operated for other departments or agencies), the United States Housing Authority, and the Federal Emergency Administration of Public Works (familiarly known as PWA). The National Youth Administration formerly in the WPA was transferred to the Federal Security Agency.

The several units of the Federal Works Agency are headed by commissioners (Public Roads, Public Buildings, Public Works, and Work Projects Administrations) and an Administrator (United States Housing Authority). The commissioners are appointed by the Administrator of the new consolidated agency and, with the United States Housing Administrator, serve under the direction and supervision of the Federal Works Administrator. The Federal Works Administrator is responsible for the coordination of activities within the agency. By special action of Congress Plan No. 1 went

<sup>1</sup>The plan was prepared pursuant to the Reorganization Act of 1939, approved April 3, 1939 (Public Resolution No. 19, 76th Congress).

into effect on July 1, 1939.<sup>2</sup> On that date, Mr. John M. Carmody was appointed Federal Works Administrator and Col. F. C. Harrington, who had been Administrator of the Works Progress Administration, became Commissioner of Work Projects.

## Appropriation to the WPA

The WPA program is being carried forward during the fiscal year under the authority of the Emergency Relief Appropriation Act of 1939.<sup>3</sup> The act provides for the continuation of the WPA through June 30, 1940, and makes available to the WPA the sum of \$1,477,000,000, together with balances of WPA funds remaining from the ERA Act of 1938. The appropriation of \$1,477,000,000 for the year contemplated an average WPA employment slightly in excess of 2,000,000 persons. The amount appropriated for the year is one-third less than was provided in the preceding year (about \$2,250,000,000) and requires a corresponding reduction in average employment.

The appropriation to the WPA, as in the case of appropriations to other agencies under the act, must be so apportioned and administered during the 12 months of the fiscal year as to constitute the total amount that will be furnished over the period for the purposes of the act. It is further provided that not more than \$50,000,000 (less than 3.4 percent of the WPA appropriation) may be spent by the WPA for administrative purposes with definite restrictions placed on the amounts that may be expended for salaries, communication service, travel, and printing and binding. The Commissioner of the WPA is given authority, such as he had under the ERA Act of the preceding year, to allocate WPA funds (up to \$60,000,000) to other Federal agencies for the prosecution of work projects similar to those operated by the WPA. These Federal projects are to be carried on under rules and regulations prescribed by the Commissioner; in no case, however, may more than 4 percent of the allocation be spent for administrative expenses, nor may the percentage of nonrelief persons on any of the Federal projects financed with

transferred WPA funds exceed 10 percent of the total number of persons employed.

## Types of Projects

The funds appropriated to the WPA under the 1939 Act are available for the prosecution of projects approved by the President under prior ERA Acts and for the prosecution of a variety of Federal and non-Federal public projects subject to the approval of the President. In specifying the different kinds of projects that may be conducted by the WPA, the act lists nearly all of the many kinds of work that had previously been done under the agency. These may be summarized as follows: highways, roads, and streets; public buildings; parks and other recreational facilities; electric, sewer, and water systems; airports and other transportation facilities; flood control, drainage, irrigation, and conservation; and educational, professional, clerical, cultural, recreational, production, and service projects.<sup>4</sup> It is required that, insofar as it is practicable, project workers shall be employed on projects nearest their respective homes.

A number of new provisions in the act define and circumscribe the project work that may be prosecuted. It is prescribed that no funds may be made available for the operation of a theatre project, nor may funds be spent after August 31, 1939, for the operation of any project sponsored solely by the WPA. Funds may not be expended on the construction of any Federal building the total estimated cost of which exceeds \$50,000, or on the construction of any non-Federal building of which the portion of the total estimated cost payable

<sup>2</sup> Section 1 (b) specifies: "Highways, roads, and streets, public buildings, parks, and other recreational facilities, including buildings thereon, public utilities, electric transmission and distribution lines or systems to serve persons in rural areas, including projects sponsored by and for the benefit of nonprofit and cooperative associations; sewer systems, water supply, and purification systems, airports and other transportation facilities; flood control, drainage, irrigation; conservation, including projects sponsored by conservation districts and other bodies duly organized under State law for soil erosion control and conservation, preference being given to projects which will contribute to the rehabilitation of individuals and an increase in the national income, eradication of insect, plant, and fungus pests, the production of lime and marl for fertilizing soil for distribution to farmers under such conditions as may be determined by the sponsor; of such projects under the provisions of State law; educational, professional, clerical, cultural, recreational, production, and service projects, including training for domestic service, aid to self-help and cooperative associations for the benefit of needy persons, and miscellaneous projects."

<sup>3</sup> Public Resolution No. 20, 76th Congress.

<sup>4</sup> Public Resolution No. 21, 76th Congress, approved June 30, 1939.

from Federal funds exceeds \$52,000, unless the building is one "(a) for which the project has been approved by the President on or prior to July 1, 1939, or for which an issue of bonds has been approved at an election held, on or prior to such date, or (b) for the completion of which funds have been allocated and irrevocably set aside under prior relief appropriation Acts."

Several specific limitations on project activities are continued in the same or slightly changed form by the ERA Act of 1939. With the exception of authorized flood control and water conservation projects, no Federal construction project can be prosecuted under the act unless funds sufficient for its completion are irrevocably set aside. Nor, with minor exceptions, may funds be used by any agency to establish or expand mills or factories which produce articles for sale in competition with private industry. Other sections prohibit the use of funds appropriated by the act for naval vessels, armaments, and munitions or for military or naval forces and prevent the prosecution of non-Federal projects designed to construct or improve penal or reformatory institutions unless the President finds that the projects will not promote the competition of products of convict labor with products of free labor.

## Financing of Projects

Several important new provisions are to be found in the act concerning the respective parts to be played by sponsors and by the WPA in the financing of projects. On and after January 1, 1940, "not to exceed three-fourths of the total cost of all non-Federal projects thereafter approved to be undertaken . . ." within any state shall be borne by the United States. This proviso does not mean that each sponsor in a given state must bear at least one-fourth of the cost of each and every project; the sponsors in each state, taken as a whole, however, must contribute at least one-fourth of the total cost in the state of all operations of non-Federal projects approved by the President on or after January 1, 1940. In view of other provisions of the act making the Commissioner responsible for determining

the adequacy of sponsors' contributions, it has been determined that insofar as practicable all operations in each state after January 1, 1940, will be so conducted that sponsors' contributions will be equal to at least one-fourth of the total cost of all non-Federal projects.

It is further provided that expenditure authorizations of Federal funds in any state, territory, possession, or the District of Columbia for other than labor costs of WPA projects shall not exceed an average of \$6 per month per worker during the fiscal year ending June 30, 1940. The Commissioner is empowered to raise the average to as much as \$7, the maximum possible under the ERA Act of 1938, only if and to the extent justified by increased costs of materials. In this connection the 1939 Act requires that construction equipment and machinery may not be purchased by the WPA if they can be rented at reasonable prices as determined by the Commissioner of Work Projects.

No non-Federal project can be prosecuted under the new act (except under Section 4—Puerto Rico Reconstruction Administration) until the sponsor has agreed in writing to finance such part of the total cost of the project as the head of the Federal agency in question "determines under the circumstances is an adequate contribution taking into consideration the financial ability of the sponsor." The head of the agency is also directed to draft regulations regarding the valuation of contributions in kind by project sponsors covering the use of facilities, equipment, and services of the employees of sponsors. Credit is to be allowed only to the extent that the furnishing of such contributions represents a financial burden undertaken by the sponsors on account of the projects.

## Monthly Earnings and Hours of Work

The ERA Act of 1939 in Section 15(a) introduced important modifications in the monthly schedule of earnings of project employees and in the number of hours to be worked per month. The first of two general provisions relating to the monthly earnings of persons employed on WPA projects directed the Commissioner of

Work Projects to fix a monthly earnings schedule "which shall not substantially affect the current national average labor cost per person . . .", and the second introduced the principle that "after August 31, 1939, such monthly earnings schedule shall not be varied for workers of the same type in different geographical areas to any greater extent than may be justified by differences in the cost of living." A third provision sets the work month for project employees at 130 hours and requires that project employees shall not work more than 8 hours per day or 40 hours per week. Exceptions to the foregoing limitations on monthly earnings and hours of work may be made in the case of relief workers with no dependents who, if they are required to work fewer hours, are to receive correspondingly smaller earnings and also in case it is necessary to protect work already done on projects, to permit workers to make up lost time, to carry on emergency work involving the public welfare, and in the case of supervisory personnel employed on projects.

A revised schedule of monthly earnings to take effect September 1, 1939, was issued on August 15, 1939, after study of all comparable cost of living data available for both rural and urban areas. As is true of earlier schedules under which workers have been paid monthly security wages since the initiation of the WPA program, the new schedule provides for monthly earnings that vary according to the region of the country and the degree of urbanization of the county in which they work. (See accompanying schedule of monthly earnings.) Different wages are paid for different classes of work in each county in a region, in accordance with a county schedule that depends on the 1930 population of the largest municipality within the county. Exceptions are made in the case of 19 large metropolitan areas as defined in the 1930 Census of Population; in each of these the wage schedule of the county with the largest municipality applies to the entire metropolitan area. The payment of similar wages in entire metropolitan areas had earlier been accomplished in many cases by contiguity adjustments.

The new schedule, like the one it replaced, makes use of three wage rate regions. As shown in the accompanying map, Wage Region

TABLE 1.—SCHEDULE OF MONTHLY EARNINGS ON WPA-FINANCED PROJECTS

EFFECTIVE SEPTEMBER 1, 1939

| Counties in Which the 1930<br>Population of the Largest<br>Municipality Was: | Wage Class            |                       |                   |         |                                            |

| Wage Region I                                                                |                       |                       |                   |         |                                            |
| 100,000 and over A                                                           | \$52.00               | \$57.20               | \$68.90           | \$89.70 | \$94.90                                    |
| 25,000 to 100,000                                                            | 48.10                 | 52.00                 | 62.40             | 81.90   | 84.50                                      |
| 5,000 to 25,000                                                              | 42.90                 | 48.10                 | 57.20             | 74.10   | 76.70                                      |
| Under 5,000                                                                  | 39.00                 | 42.90                 | 52.00             | 67.60   | 68.90                                      |
| Wage Region II                                                               |                       |                       |                   |         |                                            |
| 100,000 and over A                                                           | 52.00                 | 57.20                 | 68.90             | 89.70   | 94.90                                      |
| 25,000 to 100,000                                                            | 48.10                 | 52.00                 | 62.40             | 81.90   | 84.50                                      |
| 5,000 to 25,000                                                              | 46.80                 | 50.70                 | 61.10             | 79.30   | 81.90                                      |
| Under 5,000                                                                  | 44.20                 | 49.10                 | 59.80             | 76.70   | 78.00                                      |
| Wage Region III                                                              |                       |                       |                   |         |                                            |
| 100,000 and over A                                                           | 46.80                 | 50.70                 | 61.10             | 79.30   | 81.90                                      |
| 25,000 to 100,000                                                            | 42.90                 | 48.10                 | 57.20             | 74.10   | 75.40                                      |
| 5,000 to 25,000                                                              | 36.10                 | 40.30                 | 48.10             | 62.40   | 65.00                                      |
| Under 5,000                                                                  | 31.20                 | 35.10                 | 42.90             | 54.60   | 55.90                                      |

Wage Region I.—Connecticut, Delaware, District of Columbia, Illinois, Indiana, Iowa, Kansas, Maine, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, North Dakota, Ohio, Pennsylvania, Rhode Island, South Dakota, Vermont, West Virginia, Wisconsin.

Wage Region II.—Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

Wage Region III.—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia.

A.—The schedule of monthly earnings applicable to counties in which the 1930 population of the largest municipality was 100,000 or more is applicable to the entire area included within the following metropolitan districts, as such districts are defined by the 15th Census of the United States, 1930: Baltimore; Boston; Buffalo-Niagara; Chicago; Cincinnati; Cleveland; Detroit; Kansas City, Kans.-Kansas City, Mo.; Los Angeles; Milwaukee; Minneapolis-St. Paul; New York City-Northeastern New Jersey; Philadelphia; Pittsburgh; Providence-Fall River-New Bedford; St. Louis; San Francisco-Oakland; Scranton-Wilkes-Barre; Washington, D. C.

I includes the northeastern and north-central part of the country; Wage Region II, the western states; and Wage Region III, the southeastern and south-central sections of the country. This division of the country into wage rate regions represents a substantial change from the division previously in effect. On the earlier basis, Wage Region I included the northern and western areas of the country; it was separated from the third region comprising the southeastern and south-central states by Wage Region II, a tier of states running westward from Delaware, Maryland, and the District of Columbia and including West Virginia, practically all of Kentucky and Missouri, Kansas, Oklahoma, and a section in the northwest part of Texas.

## CHART 2

**WPA WAGE RATE REGIONS \***

Effective September 1, 1939

\* The schedule of monthly earnings is shown in Table 1.

WPA 3230

The counties in each region are distributed among four urbanization groups based upon the size of the largest municipality in each county. Counties come within one of the four groups to which differentials in wages apply depending on whether the largest city in the county had 100,000 or more inhabitants in 1930, between 25,000 and 100,000 inhabitants, between 5,000 and 25,000 inhabitants, or less than 5,000 inhabitants. Consolidation into a single class of the two groupings (25,000 to 50,000 and 50,000 to 100,000) that were present in the earlier schedule is a simplification warranted by the relatively minor differences in the costs of living in cities coming within the broader group. It is significant to note that the differences existing in the West between the cost of living in small towns and the cost of living in large cities are typically less than similar differences in other sections of the country.

The new schedule continues the differentiation by degree of skill that was contained in the old schedule. Three of the categories, involving intermediate, skilled, and professional and technical work, are maintained; the old unskilled class, however, is divided into two classes: unskilled "A" and unskilled "B." The unskilled "B" class includes work of a simple nature requiring little education or training and for which proficiency may easily be acquired. The work of this class is not hazardous and does not require heavy physical labor. Charwoman, flagman, seamstress, janitor, and messenger serve as illustrations of the occupations that come within the unskilled "B" classification.

Although the reduction of the number of urbanization groups is offset by the increase in the number of wage classes, the new wage schedule accomplishes much simplification in

the wage payment structure through the elimination of adjustments that had been in force.

The new schedule effects a substantial increase in WPA monthly earnings for workers in the southern states. Unskilled wages in rural counties of the South are increased from \$26.00 a month to either \$31.20 or \$35.10 depending upon the type of unskilled work. Comparable increases apply to other groups of counties—in those having cities of 100,000 or more population the new unskilled rates are \$46.80 and \$50.70 a month, as against the earlier rate of \$40.00. Upward adjustments of about the same magnitude were also made for the other kinds of work in the various urbanization groups of Region III.

In the northern and western states generally, only small changes result from the new schedule of monthly earnings. For some areas where contiguity or other adjustments have been in effect there are slight reductions. In cities of Wage Region I having 100,000 or more population, for example, the unskilled wage "A" rate is \$57.20 as against the preceding basic rate of \$55.00 which, as a result of adjustments, had been raised to \$60.50 in certain places. Largest increases in Wage Regions I and II are provided in the less populous counties of the West where, as already noted, the cost of living is not as much below the cost of living in urban counties as it is in other parts of the country.

## Labor and Employment Provisions

The sections of the ERA Act of 1939 dealing with employment and eligibility of workers require that no relief worker<sup>5</sup> is to be retained on the WPA program, nor is any relief worker to be given employment, unless his need for employment has been certified either by a local public relief agency or by the WPA. The Commissioner is further directed to cause a periodic investigation of the rolls of relief employees on WPA projects and to eliminate from the rolls those not in actual need. These investigations are to be conducted so as to

ensure a checking of each case at least once every six months.

The new principle is laid down in the act that, as far as practicable, preference in employing workers on WPA projects or retaining them in employment is to be based on relative needs. Where relative needs are found to be the same, preferences shall be accorded, as was required under the preceding act, in the following order: (1) United States veterans who are in need and are American citizens; and (2) other American citizens, Indians, and other persons owing allegiance to the United States who are in need. Aliens are not eligible for employment on projects prosecuted under the Act of 1939 and persons who have not made affidavit as to United States citizenship are not to receive pay under the act.

A new provision, effective not later than August 31, 1939, calls for the removal from employment of all relief workers, with the exception of veterans, who have been continuously employed on projects for more than 18 months. Workers so removed are not eligible for reemployment on WPA projects until 30 days after their removal and until they have been recertified as eligible for employment. Those persons in need who refuse bona fide offers of positions in private employment which they are capable of performing (under reasonable working conditions and at prevailing wages for such work in the community) are ineligible for WPA employment during the period when such private employment would have been available. As in previous ERA Acts, it is provided that WPA workers who take private employment and lose such employment through no fault of their own are entitled to immediate resumption of their previous employment status with the WPA. Such workers, however, must still be in need and reemployment is subject to the new statutory provision (already in force under administrative rulings of the WPA) that the person seeking reinstatement on WPA projects must first have drawn all unemployment compensation payments that have accrued to him and which are available to him as a result of his private employment. Each of the agencies operating projects with funds appropriated by the ERA Act of 1939 is authorized to determine whether persons are

<sup>5</sup> Administrative practice requires that at least 95 percent of the workers on each official project shall be persons who are certified as in need. State administrators are authorized to exempt additional workers from the certification requirement if necessary to assure the operation of sound projects; however, the number of noncertified workers on a project may not exceed 10 percent and at least 95 percent of all project employees within each state must be persons certified as in need.

able to perform their project work and no person incapable of performing satisfactory work may be assigned on a project.

## Other Provisions

The first of a series of provisions in the 1939 ERA Act makes it a criminal offense to solicit contributions for political purposes from persons having employment under the act. The second makes it a criminal offense to promise employment or other benefits made possible by the act as a reward for political activity or to deprive or threaten to deprive any person of benefit because of race, creed, color, or political activity. Subsequent provisions prohibit administrative and supervisory persons from using their official authority for influencing political elections, and forbid the payment of salary or expenses of any administrative or supervisory employee who is a candidate, or the campaign manager of a candidate, for a state or local office paying a salary and requiring full-time services. Various sections of the act deal, in some detail, with matters relating to administration and administrative and supervisory employees. Among the act's other provisions are those concerning employees' compensation, property damage claims, receipts and collections, establishment of revolving funds in connection with supplies and equipment, and false statements and fraud.

## Appropriations to Other Agencies

In addition to the appropriation to the WPA of \$1,477,000,000, the ERA Act of 1939 contains appropriations for several other agencies. To the National Youth Administration is appropriated \$100,000,000 for the fiscal year 1940 together with balances of previous appropriations. These funds are to be used to provide part-time work and training to needy young persons who are no longer in regular attendance

at school and who have been unable to obtain employment, and to enable needy young persons to continue their education at schools, colleges, and universities. An appropriation of \$143,000,000 together with the balances of unobligated funds is made to the Department of Agriculture. These funds are made available for continuing to provide rural rehabilitation and relief to needy farmers and relief to other needy persons through loan, grant, project work, and debt adjustment programs conducted largely under the Farm Security Administration. The Puerto Rico Reconstruction Administration receives an appropriation of \$7,000,000, together with balances from its previous appropriations, to continue its rural rehabilitation and project activities in Puerto Rico. To the Bureau of Indian Affairs is appropriated \$1,350,000 to provide relief and rural rehabilitation for needy Indians.

Funds for administrative expenses incurred by various Federal agencies and bureaus incidental to the carrying out of the purposes of the act are appropriated as follows: General Accounting Office, \$5,225,000; Department of the Treasury, \$14,598,825 (Procurement Division, Branch of Supply, \$5,200,000; Division of Disbursement, \$2,500,000; Office of the Treasurer, \$675,000; Secret Service Division, \$250,000; Office of Commissioner of Accounts and Deposits and Division of Bookkeeping and Warrants, \$5,973,825); Bureau of the Budget, \$26,175; Public Health Service, \$300,000; and Civil Aeronautics Authority, \$250,000. For payment of medical and hospital care and disability and death compensation for persons injured while at work, \$5,250,000 is made available to the United States Employees' Compensation Commission. Including the additional appropriations made to the Executive Office of the President (\$850,000) and the National Resources Planning Board (\$750,000), the total funds specifically provided in the ERA Act of 1939 amount to \$1,755,600,000.

# WPA PROJECT ACCOMPLISHMENTS AND OPERATIONS

**T**ANGIBLE evidences of WPA project work are found in all parts of the country. Adapted to the particular needs of the many cities, towns, and rural areas, the accomplishments realized through WPA operations include large numbers of widely varied public improvements and public achievements. Among the wealth of project accomplishments are many new or improved public buildings, more adequate road and street systems, new airports, improved recreational grounds, additional sewer and water facilities, sanitation and health measures, and various kinds of conservation and flood control work.

Nonconstruction work has contributed clothing and other necessary articles to families in need; it has provided leadership and instruction in recreation and in adult and other kinds of education; it has extended public health services, made possible the improvement of public records, and supplied information of general interest through traffic, natural resource, and research and statistical surveys. Significant services have also been provided through the art, music, theatre, writing, and historical records projects of the WPA.

With the exception of a very limited amount of Federally initiated work, WPA projects are undertakings that are proposed by the state, city, county, and other local governments of the communities where the work is carried on. Sponsorship by such bodies involves not only the initial planning of the work but also the acceptance by the sponsor of part of the cost, particularly that incurred in providing supplies,

materials, equipment, and other nonlabor items. In order to be acceptable for WPA operations projects must satisfy the various eligibility requirements. These are built around the program's basic objective of providing work for the unemployed on useful public projects. A reservoir of approved projects is continually maintained from which the WPA selects for active operation such projects as are most suited to the skills of the unemployed persons available for assignment and the work requirements of the many communities.

Most WPA undertakings are construction jobs. Projects of this kind accounted for more than 21,500 of the 31,100 WPA undertakings in operation at the end of June 1939. In terms of employment construction projects were even more important since construction undertakings provided work for about 90 persons per project as against an average for all types of activities of 78 workers per project. Almost 8,700 road and street construction projects alone were in operation at the end of the fiscal year, with an average labor force of 120 persons per project. Besides its construction work the WPA was engaged in over 7,400 white collar projects of various kinds and almost 2,200 sewing projects. (See Table 2.)

Total expenditures on WPA project operations through June 30, 1939, amounted to \$7,676,254,000. Included in the aggregate were \$6,373,417,000 in Federal funds of which almost nine-tenths was used in payment of wages to project workers. As noted and discussed below

TABLE 2.-NUMBER OF WORK PROJECTS OPERATED BY THE WPA, BY TYPES OF PROJECTS <sup>A</sup>

AS OF JUNE 21, 1939

| Type of Project                          | Number of Projects | Type of Project                                        | Number of Projects |
|------------------------------------------|--------------------|--------------------------------------------------------|--------------------|

<sup>A</sup> Data apply to continental United States.

on page 30, sponsors provided \$1,302,837,000 of the total, contributed principally in the procurement of supplies and equipment. The project expenditure totals relate only to projects operated by the WPA and do not include expenditures for undertakings of other Federal

agencies financed with transferred WPA funds or for the work project and student aid programs of the NYA.

It is the purpose of the sections that follow to review the work project operations of the WPA, filling in the broad outline that has been suggested. The discussion deals successively with the work accomplished, the manner in which project operations have been carried on, and the various expenditures that have been made. Employment on WPA projects is reviewed elsewhere on pages 89 to 107.

## Physical Accomplishments on WPA-Operated Projects

An inventory of the work completed on WPA projects must include a count of such diverse physical accomplishments as the building of roads and bridges, the erection of buildings, the installment of water supply and sanitation systems, the creation of recreational facilities, and the work performed in sewing rooms and the other accomplishments in the nonconstruction fields. Some indication of the amount of the different kinds of work is, of course, to be found in the man-hours worked, the numbers of persons employed at successive periods, and the funds expended on the several types of projects. But because such information in

WPA-BUILT SEWAGE DISPOSAL PLANTS CONTRIBUTE NOTABLY TO MUNICIPAL FACILITIES IN MANY CITIES AND TOWNS

each case makes use of a common denominator it provides at best only a very indirect measure of the many accomplishments.

For a true inventory it is necessary to define and obtain information on a number of comparatively broad classes of work which as a group are able to cover the general field of activities. Each class of accomplishment must relate to some type of accomplishment that is objective and measurable, covering things that are at least roughly similar. Since the number of classes must not be unduly large, inventory can be taken of only the important kinds of accomplishments. Qualifications such as have been suggested are inherent in any inventory of physical accomplishment for a broad program of activities.

In the following discussion of the work completed through WPA project operations two kinds of inventory information are used. The first relates to the work done on the WPA construction projects that were completed during the year ending June 30, 1939, and the other to the work accomplished on all projects, including construction and nonconstruction undertakings and completed and active projects, from the beginning of WPA activities in 1935 through June 30, 1938. The first is of service in showing the rate of completion for important kinds of accomplishments during a recent period, on an annual or a day-to-day basis, and the second, the magnitude of the physical accomplishment totals for the WPA program when cumulated over a period of almost three years.

### Accomplishments on Construction Projects Completed During the Year Ending June 30, 1939

Construction projects of the WPA were finished at the rate of 70 per day during the 12 months ending June 30, 1939. Through these projects the WPA in cooperation with sponsoring agencies had made ready for public use approximately 111,000 miles of new and improved highways, roads, and streets, 6,400 new buildings, 2,130 miles of new water mains, 3,280 miles of new sewer lines, and many other kinds of new and reconditioned public facilities. The potential benefits accruing to the public

TABLE 3.—SELECTED ITEMS OF PHYSICAL ACCOMPLISHMENT ON WPA-OPERATED CONSTRUCTION PROJECTS COMPLETED DURING THE YEAR ENDING JUNE 30, 1939

| Type of Construction | Miles of Roads and Streets |             |                    |             |
|----------------------|----------------------------|-------------|--------------------|-------------|
|                      | Total                      | Rural roads | Streets and alleys | Other roads |
| Total                | 110,783                    | 97,844      | 11,550             | 1,389       |
| Paved                | 9,637                      | 4,628       | 4,794              | 215         |
| New                  | 1,815                      | 2,258       | 2,463              | 124         |
| Improved             | 4,792                      | 2,370       | 2,331              | 91          |
| Unpaved              | 101,146                    | 93,216      | 6,756              | 1,174       |

from the many kinds of accomplishments were widespread throughout the country.

Rural roads of the farm-to-market type accounted for a large share of the 111,000 miles of roads and streets that were finished on the projects which were completed during the year. An average of 255 miles of unpaved roads constructed or improved per day were included among the project accomplishments of the WPA. Paved roads and streets were completed at the rate of 27 miles per day. As may be noted in Table 3, about half of the paved mileage was new construction work; the newly paved streets in cities and the newly paved roads in rural areas were about equal in length.

WPA accomplishments in the line of road and street appurtenances included the construction of 17,600 new bridges and viaducts and the renovation of 8,510 during the year 48 and 23 respectively on a daily basis. Approximately 162,700 culverts also were installed,

| Steel                                           | Number              | 1,141            | 3,162        |
| Masonry                                         | Number              | 2,652            | 1,081        |
| Culverts                                        | Number              | 162,662          | 15,890       |
| Sidewalks and paths                             | Miles               | 3,257            | 1,272        |
| Paved                                           | Miles               | 2,690            | 1,069        |
| Unpaved                                         | Miles               | 567              | 173          |
| Curbs                                           | Miles               | 3,005            | 670          |
| Gutters                                         | Miles               | 1,067            | 106          |

and the length of new sidewalks, curbs, and gutters built by the WPA exceeded 3,000 miles in the first two instances and 1,000 miles in the last instance. Certain important types of the many kinds of roadway appurtenance work are shown in Table 4.

WPA work on public buildings jobs that were finished during the 12 months ending June 30, 1939, resulted in the completion of 6,400 new buildings and 630 additions to existing structures and the renovation of 17,340 others. An average of 18 new buildings and 48 renovated buildings were completed each day. Work of the latter kind ranged from major remodeling to general reconditioning and included the reconditioning required after floods and the New England hurricane. Of the new buildings about a sixth were schools and a third were recreational buildings, such as auditoriums, gymnasiums, stadia, and bathhouses. Among the other kinds of WPA-constructed public buildings, as may be seen in Table 5, were hospitals, courthouses, city halls, armories, jails, fire houses, and aircraft hangars.

The completion of WPA water supply and sanitation projects during the year resulted in notable increases in municipal facilities. In the course of the year 2,130 miles of new water mains and distribution lines (about 6 miles per day) and 3,280 miles of new storm and sanitary sewer lines (about 9 miles per day) were placed in service. Work was also completed on significant mileages of improved lines of each type. Related accomplishments included the construction of 21 new water treatment plants, 150 sewage disposal plants, and 20 garbage and

TABLE 5.—SELECTED ITEMS OF PHYSICAL ACCOMPLISHMENT ON WPA-OPERATED CONSTRUCTION PROJECTS COMPLETED DURING THE YEAR ENDING JUNE 30, 1939

| Type of Building                                         | Number of Buildings |           |              |

trash incinerators as well as 170 pumping stations and 400 storage tanks, reservoirs, and cisterns. The major accomplishments in the water supply and sanitation field are shown in Table 6.

The rapid strides that have been made in airport and airway facilities in the past several years have been greatly furthered by WPA projects for the construction and improvement of airports and air navigation aids. Through the projects completed in the period from July 1, 1938, to June 30, 1939, 52 new landing fields were made available for use and 62 existing landing areas were improved (one in

| Storm and sanitary sewers                      | Miles               | 3,277            | 564          |
| Service connections                            | Number              | 73,000           | 1,200        |
| Manholes and catch basins                      | Number              | 95,012           | 79,474       |
| Sanitary toilets                               | Number              | 438,166          | 2,527        |

FINE ARTS MUSEUMS ARE INCLUDED AMONG WPA PUBLIC BUILDINGS

every seven and six days, respectively). WPA workers on airport and airway projects also completed the construction of 47 new aircraft hangars and placed air markers in 1,670 locations.

Selection of a few of the outstanding kinds of physical accomplishments pertaining to roads, public buildings, sewer and water systems, and airports and airways does not cover many kinds of work in each of these fields. Furthermore no reference has been made to many other fields of WPA work. Through work on recreational facilities, for example, newly developed park areas averaging 30 acres in size were opened at the rate of one each day as well as eight new or improved playgrounds, five new tennis courts, and two new athletic fields. These and other kinds of accomplishments are covered in Table 7.

TABLE 7.—SELECTED ITEMS OF PHYSICAL ACCOMPLISHMENT ON WPA-OPERATED CONSTRUCTION PROJECTS COMPLETED DURING THE YEAR ENDING JUNE 30, 1939

MISCELLANEOUS FACILITIES<sup>a</sup>

| Type of Facility                    | Unit of Measurement     | New Construction | Improvements |
|-------------------------------------|-------------------------|------------------|--------------|
| Airplane landing fields             | Number                  | 52               | 62           |
| Parks                               | Acres                   | 11,059           | 88,983       |
| Playgrounds                         | Number                  | 484              | 2,331        |
| Athletic fields                     | Number                  | 607              | 456          |
| Tennis courts                       | Number                  | 1,765            | 690          |
| Swimming and wading pools           | Number                  | 253              | 96           |
| Dams (other than storage or power)  | Number                  | 14,799           | 19           |
| Riprap (other than river bank)      | Square yards surfaced   | 2,394,000        | 177,000      |
| Retaining walls and revetments      | Linear feet             | 1,620,300        | 96,000       |
| Landscaping around public buildings | Number of buildings     | -----            | 5,808        |
| Reforestation                       | Number of trees planted | -----            | 5,621,000    |

<sup>a</sup> Other than highways, roads, and streets; public buildings, and water supply and sanitary and storm sewer facilities.

Other broad groups of project accomplishments that have not been referred to above include flood and erosion control, navigation aids, and irrigation work; grounds improvements; conservation measures; and miscellaneous work in the construction field not elsewhere covered. Table 7 reviews some of the work completed during the past year in each of these fields. As already noted the inventory of work done on the WPA projects which were completed during the year ending June 30, 1939, does not cover the nonconstruction activities of the WPA.

## Accomplishments on All Types of Projects through June 30, 1938

The inventory of WPA accomplishments from the beginning of operations in 1935 through June 30, 1938, summarizes the important kinds of work done during a period of almost three years including nonconstruction as well as construction work. It indicates that, as of June 30, 1938, the extent of WPA accomplishments had already assumed large magnitudes. Further accomplishments effected in the year following June 30, 1938, probably were roughly proportional to the accomplishments realized in the other years if allowance is made for different levels of activity.

It should be noted, however, that cumulative totals through June 30, 1939, cannot be obtained by combining the data for projects completed in the last year with the cumulative data as of June 30, 1938. The latter tabulation includes completed work units on all WPA projects that had been placed in operation up to that time, including work on both completed and active projects. The June 1939 data, on the other hand, relate to work accomplished on WPA projects which were completed during the year ending June 30, 1939. Some of these projects were in operation prior to June 30, 1938, and contain work units which were completed at that time. Such work is included in the 1938 summary. It should be noted also that work done during the last year on projects which were being operated on June 30, 1939, is not included in either summary. Summary tabulations of WPA accomplishments, as of June 30, 1938, appear as Tables 8 and 9 and state distributions of selected items as Table XVII of the appendix.

## Construction Activities

That road and street work has been of importance in the WPA program is shown in the inventory of accomplishment through June 30, 1938, in much the same way that it appears in the accomplishment data noted above and in the employment, man-hour, and expenditure figures noted elsewhere in this report. Through June 1938 project employees had built or reconditioned a total of 280,000 miles of roads

and streets, a distance sufficient to encircle the earth eleven times.

Much of the work was done on rural roads as distinct from urban streets. On a state-by-state basis the road and street mileages of the middle-western and south-central states were outstanding. A preponderance of the 245,000 miles of rural roads completed during the three-year period were unpaved; the unpaved rural road work involved the development of a properly drained roadbed and the application of gravel or crushed rock to provide all-weather transportation.

In urban areas WPA workers laid hard surfaces—concrete, brick, block, or bituminous—on 5,000 miles of streets, reconditioned 6,000 miles of pavement, and made improvements to

19,000 miles of unpaved streets and roads. Altogether in both rural and urban sections, including parks, more than 23,600 miles of pavement were laid or reconditioned, representing about 8 percent of the total mileage completed by the end of June 1938.

Building or reconditioning a stretch of road usually involves not only the work on the roadbed itself but also the construction or improvement of appurtenances such as bridges, culverts, guardrails, and curbs. By the end of June 1938, WPA workers had constructed or reconditioned 52,605 bridges, varying in length from a few feet to more than a hundred feet. As many as 29,084 of the bridges were new structures that were necessary in the development of new roads or in replacing bridges that were

ARMORY BUILT BY THE WPA

unsuited for further use or swept away by floods. Other accomplishments in connection with roads and streets included the installation of 313,000 new culverts, the reconditioning of 51,000 existing culverts, and the completion of many miles of curbs, gutters, guardrails, and roadside ditches. (See Table 8.)

During the first three years of WPA operations nearly 17,600 new public buildings were constructed, additions were made to 1,700 buildings, and 46,000 others were modernized or reconditioned by project workers. Elementary and high schools figure predominantly among the 2,289 new school buildings and some college and university buildings are included. Many of the elementary school buildings are small schools in rural areas accommodating fewer than 150 pupils. Floor space of 758 other schools was enlarged by the addition of new sections to existing buildings. Besides the new construction work 21,550 schools were reconditioned. Work on educational buildings also includes the construction of 73 new libraries and 32 additions and the renovation of 622 others.

Facilities for sports and other recreational activities, often in connection with educational institutions, were increased by the erection of 974 grandstands and stadia, 497 gymnasiums, and 215 auditoriums, and the renovation of nearly a thousand such structures. About 3,800 other recreational buildings, such as pavilions, bathhouses, or park shelters, were completed by the middle of 1938. Other new buildings erected by WPA workers included 100 hospitals, 800 courthouses, city halls, and other administrative buildings, 150 fire houses, and 100 aircraft hangars.

Greater opportunities for public participation in many recreational activities were provided through the construction of 140 golf courses, 900 swimming and wading pools, 4,600 tennis courts, 3,400 athletic fields and playgrounds, and many other facilities such as ice-skating rinks, and handball, horseshoe, volleyball, and badminton courts. More than 5,000 parks were developed or improved through the clearing of underbrush, planting of shrubbery, building of outdoor ovens and other picnic equipment, and miscellaneous work.

Since the problems of maintaining an adequate water supply and of providing for proper sewage disposal are of great importance in cities and villages throughout the country, many projects have been directed toward these ends. Through June 30, 1938, not only had the distribution of water to consumers been facilitated and increased through the installation of 6,100 miles of water mains, 148,000 new consumer connections, and 79 new water purification plants, but the capacities of water systems had also been enlarged through the construction of 1,342 storage tanks, reservoirs, and cisterns.

Towards better sewage disposal facilities WPA project work contributed nearly 9,000 miles of sewer lines, and 300 new sewage treatment plants. A total of 35 garbage incinerators were erected in urban areas as well as 1,144,000 sanitary privies in areas not served by sewers. Approximately 1,642,000 acres of lowlands and swamp areas were drained by the excavation of 8,700 miles of mosquito control ditches, and more than 115,000 openings of abandoned mines were sealed in order to reduce stream pollution and destruction of vegetation.

### Nonconstruction Activities

WPA employees working on nonconstruction projects also achieved a wide variety of tangible results. By the end of June 1938, workers in sewing rooms had produced more than 180,000,000 garments and household articles; items of childrens' and infants' apparel were most numerous but millions of garments for men and women were also made. These are distributed free of charge through local public relief agencies to persons in need or donated to tax-supported institutions for purposes that could not be satisfied through their current budgets. Besides being an important source of needed clothing for relief families and of additional supplies for tax-supported institutions, the products of sewing rooms have been of great importance in meeting emergency needs during periods of floods or other disasters.

Valuable services have also been rendered by workers employed on canning, school lunch, and housekeeping aid projects. By the first

of July 1938 more than 48,000,000 pounds of meat, fruit, and vegetables had been canned for distribution by relief organizations and for use on school lunch projects. Over 238,000,000 hot lunches had been served to undernourished school children. In the homes of a million families temporarily deprived of the regular homemaker by illness or other causes, housekeeping aides averaged about seven visits per family, helping with the housework at the time of the emergency.

Activities of a professional, technical, or clerical nature have included work in libraries, museums, and clinics; a wide variety of research and statistical surveys; educational and recreational programs; and the Federal arts project. Reading facilities were extended by the establishment during the three-year period of numerous new traveling and branch libraries and new reading rooms, the renovation of 56,000,000 volumes of public library and public school books, and the transcription of over 2,000,000 pages of Braille for blind readers. Doctors, dentists, and nurses employed on public health projects assisted in 15,000,000 examinations, immunizations, or treatments.

Among the surveys conducted by project workers are listings of historical records, engineering surveys, and regional planning surveys. The 1,300 research and statistical studies were conducted in such fields as agriculture, natural resources, industry, science, and government. Among the numerous education courses offered, classes in general adult education and for the

<sup>a</sup> Revised.

reduction of illiteracy have predominated, but great interest has been shown in vocational training classes, parent education, and home-making education as well as in the nursery schools in which thousands of preschool children have received care. The public has participated in large numbers in the recreation programs conducted under WPA leadership. Sports and other types of physical recreation have met with particular interest and social and cultural recreation and institutional recreation also have been extensive. Through Federal Project No. 1, art, music, and the theatre were made available to millions of persons to

whom they had previously been inaccessible and, by July 1938, a total of 293 books and pamphlets prepared by WPA writers had been published.

This enumeration of some of the more important measurable items among the accomplishments of WPA projects serves to indicate the broad scope of the program and the extent of certain kinds of achievements. Much of the WPA work, however, is not covered by the inventory and some is not susceptible to measurement. This discussion, consequently, and the accompanying tables (Tables 3-9 above and Table XVII of the appendix) are unable to

cover in full the work accomplished through the operation of WPA projects.

## Initiation and Prosecution of Project Work

WPA projects, with few exceptions which no longer exist, have been initiated in the communities where the work is done. The various state and local governmental agencies that propose the project undertakings and thereby become sponsors of the work are required to help in defraying project expenses, particularly those involving materials, supplies, and equipment. Project proposals and applications are reviewed by the WPA for conformity with the rules and regulations of the WPA program. If a project is acceptable in these respects, the application is submitted for approval by the President who has final authority of project approval.

The WPA maintains a reservoir of approved projects from which it selects project work in

keeping with the changing requirements of the WPA program. The actual work chosen for operation may involve either an entire project as approved or a self-contained unit of work that is included in the approved project. The prosecution of project work is carried out under the WPA. It is the purpose of the sections that follow immediately below to describe briefly the several aspects of project procedures that have been mentioned.

## Proposal of Project Work

Work prosecuted by the WPA originates with project proposals of state and local public agencies and, to a very limited extent, of Federal agencies. The various states, counties, cities, towns, and other governmental entities and the legally constituted public agencies thereof that propose WPA undertakings are known in their relation to the WPA as project sponsors. Unofficial or nonpublic groups may not act as sponsors of WPA projects. They may, however, cooperate with the sponsor in

SCHOOL CHILDREN BENEFIT GREATLY FROM LUNCHES PREPARED AND SERVED BY WPA WORKERS

the planning and prosecution of the proposed work.

The first step in the development of project work is the preparation of a project proposal by the sponsor. The sponsor may request assistance in this connection from the state and local WPA offices. The project proposal contains detailed specifications regarding the character of the proposed project work; it also contains sections in which the sponsor recognizes explicitly the responsibilities that he assumes in proposing the project.

Upon approval of the project proposal by the state WPA administration, a project application is prepared and submitted to the central WPA office in Washington. In the application are included a detailed description of the work to be undertaken; the location of the proposed work; the schedule of the number of required workers classified by occupations; the estimated cost of the labor, materials, equipment, and services necessary to the project's operation in terms of Federal and sponsors' costs; and other pertinent information. Preliminary plans, specifications, and working procedure that have been prepared by the sponsor accompany the project application, the nature of the project determining the detail in which such information is required.

## Review of Project Application

In the Washington office of the WPA the project application is referred to the operating division having jurisdiction over the particular kind of work involved, for examination of technical phases and general desirability of the project. If favorable action is recommended by the operating division, careful study of other aspects of the project's eligibility is then made. This investigation is based on legal interpretations of the Emergency Relief Appropriation Acts and pertinent Executive orders, rulings of the Bureau of the Budget and the General Accounting Office, recommendations of interested Federal agencies, and the general eligibility rules of the WPA. Certain of the more general eligibility requirements are noted in the following section of this statement.

If the project application has the favorable review of the Federal WPA, it is submitted for

approval by the President in whom each of the ERA Acts have vested authority for final approval of projects. (Applications have been submitted first to the Federal Works Agency since the creation of that agency on July 1, 1939.) When such final approval is given, the project enters the reservoir of approved undertakings from which selection for operation may subsequently be made.

## Eligibility Requirements

In reviewing a proposal for project work a number of factors are given careful consideration. The project must result in benefit to the public and must be such as to provide work for the unemployed of the community in accordance with their occupational skills. It must be clear, also, that the sponsor has the legal authority to engage in the work proposed and the authority to assume or provide for the operation and maintenance of the completed work if such is required by the nature of the project. The improvements proposed must be made to public property, the ownership of which is vested in the state or a political subdivision thereof, or a legally constituted public agency thereof, and such property must be held either for the conduct of normal government functions or for the general use of the public.

In exceptional cases where large public benefit will result, work on private property may be permitted where leases, easements, or other legal authority granted to the sponsor are sufficient in duration to cover the normal expected life of the improvements to be accomplished by means of the proposed work.

Consideration is given in the review of projects to the distribution of costs between labor and nonlabor items and Federal and sponsors' funds. This is of importance because approved projects become part of the reservoir of work from which projects are selected for operation. In each state the WPA program must be operated in conformity with legislative requirements which limit the amount of Federal funds available for nonlabor costs. Sponsors must defray the costs, necessary to the operation of useful projects, that are in addition to the costs for which Federal funds are available. The ERA Act of 1939, covering operation after

NEW PAVED ROADS  
AND STREETS ARE  
COMPLETED AT THE  
RATE OF ABOUT 13  
MILES PER DAY

June 30, 1939, contains definite minimum requirements for average sponsors' participation.<sup>1</sup>

Among projects which are not eligible for approval under WPA criteria are those for current maintenance work or work which is a recurrent responsibility of the sponsor or which would displace or prevent the employment of personnel by the sponsor, such as normally would be done by the sponsor without WPA assistance. The object of this restriction is to avoid the prosecution of projects which would displace personnel regularly employed by the sponsor or by some other agency.

Proposals for certain types of work relating to the activities of various Federal agencies require review by the interested agencies. Thus applications for projects involving work on or along highways in the Federal-aid system are subject to review and approval by the Public Roads Administration (the Bureau of Public Roads of the Department of Agriculture prior to the effective date of Reorganization Plan No. 1). The purpose of this requirement is to permit the WPA to obtain advantage of the technical experience of the Public Roads Administration and to insure that the work accomplished will conform to general policies of that agency and not conflict with proposed work which will be under its supervision.

Airport and airway projects are subject to the approval of the Civil Aeronautics Authority

with respect to the location of the work and the technical aeronautical features involved. Flood control and navigable stream improvement projects are subject to review, approval, and advisory technical supervision by the appropriate district engineer of the Corps of Engineers. Community sanitation, malaria control, and mine-sealing activities are subject to approval and technical supervision of the Public Health Service, and certain types of drainage and land reclamation work affecting wildlife habitats require approval of the Bureau of Biological Survey.

The National Park Service not only reviews projects for work within the national parks under its jurisdiction but also provides a similar type of examination and recommendation on projects in state and local parks, parkways, and recreational areas. Construction projects for the restoration or rehabilitation of archeological and historical areas or structures also are subject to review by the National Park Service.

### Selection for Operation

Placing a project in operation involves a selection process for which the state WPA administrator is responsible, in addition to the process through which the project application has passed prior to approval. One of the foremost considerations in selecting a project for prosecution is, of course, the need for the

<sup>1</sup> See page 10.

employment which the project would provide and the immediate availability of the kinds of labor required for the work. The Federal cost per man-month, the portion of the cost to be defrayed by the project sponsor, the social benefit, and the economic usefulness of the work proposed, all influence the selection of projects for actual operation. The preference of the sponsor for undertaking one appropriate project in advance of another is a determining factor.

### Prosecution of Projects

After an undertaking has been selected for operation, a project engineer or project supervisor is selected by the local office of the WPA and the schedules of work and of material and equipment deliveries are arranged between the operating division concerned and the sponsor. The authority of the sponsor is not exercised in such a manner as to conflict with the regulations of the WPA, but full consideration is given to the recommendations of the sponsor regarding the conduct of work, the sequence of operations, methods to be employed, and the interpretation of plans and specifications which must be furnished by the sponsor. When all details of working procedures have been developed, the workers necessary for project operations are requisitioned from the Division of Employment by the division having supervision of the project, usually by the project supervisor.

During the course of the work the project supervisor is responsible for the efficient operation of the undertaking to the local representative of the WPA operating division having jurisdiction over the project. To the necessary extent the project sponsor is required to furnish such elements as technical advice, inspection, and supervisory assistance. The sponsor and the project supervisor cooperate in arranging for the sponsor's share of the materials, equipment, and services to be on hand at the project site when needed. Frequent inspection by the local representative of the WPA and reports at scheduled intervals keep the local WPA office informed of the progress of the work.

Fiscal control of the project is maintained by the Division of Finance of the WPA and the Treasury state accounts office. All documents relating to obligations and expenditures

for both labor and nonlabor items are initiated by the Finance Division for action by the Treasury Department. The Finance Division also records the receipt of those items of project cost which the sponsor has agreed to assume. A continuous check is maintained to make certain that Federal expenditures on the project do not exceed the amount approved in the project application or such sublimitations as may have been prescribed by the WPA.

All possible steps are taken, even before the project is begun, to provide safe working conditions. Buildings are inspected for fire, accident, and health hazards; trucks and other vehicles of transportation must satisfy safety requirements. During the course of operations, regular inspections make effective the application of comprehensive safety regulations. Only experienced men may be assigned to jobs involving unusual hazards and workers in general must be familiarized with precautionary measures if these are necessary.

Elimination of danger from fire is a constant objective and the regulations specify particular care in handling and storing inflammable and explosive materials. Periodic inspection is required for tools, machinery, and other equipment, including trucks. On certain types of jobs special devices for the protection of the worker, such as goggles, respirators, and helmets must be provided. Provisions are also made for assistance when accidents occur, with first-aid kits and persons qualified to administer first aid always available.

### Project Expenditures and Related Information

#### Approved Projects

The WPA constantly has available for operation a large reserve of approved projects which enables it to adjust its program quickly and efficiently. The reserve is sufficiently large in size to permit a substantial increase when needed in the number of jobs provided for unemployed workers and sufficiently diversified as to the types of work to permit adjustment of the program to shifts in the occupational characteristics of unemployed workers.

Projects approved by the President under the ERA Acts of 1935, 1936, 1937, and 1938 numbered in the hundreds of thousands and their estimated cost in Federal funds, as of June 30, 1939, amounted to about \$10,000,000,000. The cost total includes the value of work projects that had been placed in operation by that time as well as the value of all project work that was held in reserve at the time; it does not include project authorizations of the National Youth Administration or the value of projects operated by other agencies with funds transferred from the WPA. Sponsors' funds pledged toward defraying project expenses totaled \$2,397,000,000 for all the approved projects. Consequently the estimated total cost of all projects approved through June 30, 1939, aggregated \$12,854,000,000.

Under the ERA Act of 1938 alone the total estimated value of approved projects amounted to nearly \$3,774,000,000. Sponsors' pledges of \$839,000,000 accounted for 22 percent of this total as compared with about 19 percent over the four years ending in June 1939. Highway, road, and street projects as approved during the last year represented 43 percent of the year's total value of approved projects. White collar projects accounted for nearly 13 percent of the total, sewer system and other

public utility work, for 10 percent, and public buildings undertakings, for 9 percent. Projects for the operation of sewing rooms and for the improvement of recreational facilities also were important, as is shown in Table 10.

### Project Expenditures

Expenditures of Federal and sponsors' funds for the prosecution of WPA projects amounted to \$2,558,035,000 during the year ending June 30, 1939. The total was substantially larger than the sums paid out in earlier years, as may be seen in Table 11. Project expenditures have, of course, varied with the level of project operations and the numbers of WPA employees.

The larger expenditures of the last fiscal year resulted primarily from the continued expansion of project activities following the sharp decline in private employment that began in the latter half of 1937. The increase in the scope of WPA operations took place over a period of about one year. Continued failure to find jobs in private industry forced unemployed workers first to draw upon savings, unemployment compensation credits, and other resources and eventually to seek assistance from relief agencies and the WPA. Additional factors contributing to the expansion towards the end of the period were the New England hurricane and floods of September 1938 and the serious condition of tenant farmers and laborers in the South.

The culmination of the expansion in WPA activities is reflected in a total project expenditure of almost \$700,000,000 during the three months ending December 31, 1938. Including both Federal and sponsors' expenditures this total is larger than corresponding amounts used in any other quarter since the initiation of the WPA program. Approximately \$635,000,000 was expended on WPA project activities during the three-month period preceding, and during the three-month period succeeding, the quarter of largest outlays. In the April-June 1939 quarter project expenditures of sponsors' and Federal funds amounted to about \$585,000,000. Total expenditures for WPA projects during the four years ending June 30, 1939, were \$7,676,250,000. (See Table 11 on the following page.)

TABLE 10.—TOTAL ESTIMATED COST OF PROJECTS APPROVED BY THE PRESIDENT UNDER THE ERA ACT OF 1938 FOR OPERATION BY THE WPA, BY MAJOR TYPES OF PROJECTS AND BY SOURCES OF FUNDS

AS OF JUNE 30, 1939

[Amounts in thousands]

| Type of Project                                    | Total       |          | Federal Funds | Sponsors' Funds |                   |
|----------------------------------------------------|-------------|----------|---------------|-----------------|-------------------|
|                                                    | Amount      | Per cent |               | Amount          | Per cent of total |
| Total .....                                        | \$3,773,943 | 100.0    | \$2,935,291   | \$838,652       | 22.2              |
| Highways, roads, and streets .....                 | 1,633,570   | 43.2     | 1,223,841     | 409,729         | 25.1              |
| Public buildings .....                             | 349,527     | 9.3      | 259,282       | 90,245          | 25.8              |
| Parks and other recreational facilities .....      | 267,466     | 7.1      | 218,075       | 49,391          | 18.5              |
| Conservation .....                                 | 127,752     | 3.4      | 102,974       | 24,778          | 19.4              |
| Sewer systems and other utilities .....            | 309,312     | 8.8      | 281,957       | 27,355          | 23.7              |
| Airports and other transportation facilities ..... | 95,135      | 2.5      | 61,244        | 33,891          | 34.2              |
| White collar .....                                 | 172,802     | 12.5     | 398,537       | 74,265          | 15.7              |
| Sewing .....                                       | 239,259     | 6.3      | 210,928       | 28,331          | 11.8              |
| Goods, other than sewing .....                     | 60,481      | 1.6      | 50,316        | 10,165          | 16.8              |

<sup>A</sup> Includes purchases of land, land leases, easements, and rights-of-way.

Source: Federal funds represent voucher payments as reported by the Treasury Department; sponsors' funds are based on WPA reports of sponsors' certifications.

## Sponsors' Funds

Project expenditures in the 12-month period ending June 1939 included \$2,064,997,000 in Federal funds and \$493,038,000 in sponsors' funds. As a group, the various sponsors—state departments, county boards, city councils, township trustees, and other public bodies—defrayed 19.3 percent of total project costs during the year. The amount of sponsors' expenditures has increased significantly since the first years of the program's operations. The \$493,038,000 total for the year ending in June 1939 was an increase of nearly \$118,000,000 over the preceding year and of \$191,000,000 over the year ending in June 1937. On a quarterly basis sponsors' outlays were at their peak, \$131,638,000, during the October-December quarter of 1938. (See Table 11.)

Sponsors' contributions have tended to increase on a percentage basis, as well as in total amount, since the initiation of WPA operations. However, sponsors were unable to increase their expenditures in the same proportion as the Federal Government when rapid expansion in WPA employment became necessary beginning in the fall of 1937. Consequently, the percentage of sponsors' expenditures was somewhat lower in the year ending June 30, 1939, than in the previous 12-month period, the figures being

19.3 and 21.6, respectively. The 19.3 percent reported for the year ending June 30, 1939, is considerably higher than the 10.0 percent and 14.7 percent recorded for the fiscal years ending June 30, 1936, and 1937, respectively.

In general, an expanding or relatively high level of project operations has been associated with smaller percentage expenditures of sponsors even though the amounts of sponsors' funds have increased substantially with the expanded activities. This is a result of the Federal Government's ability with its greater financial resources to deal with emergency situations and rapid increases in the need for project employment more quickly and adequately than state and local governments.

Sponsors' funds on a relative basis were greatest (amounting to almost a fourth of the total) in the last half of 1937 when WPA employment was at a low level following a period of contraction. Typical relationships are also found in the last fiscal year. Even though the amount of sponsors' funds expended decreased from the \$131,638,000 expended in the October-December 1938 quarter to the \$120,918,000 expended in the April-June 1939 quarter, the relative volume of sponsors' expenditures increased from 18.8 to 20.7 percent of total project costs. Over the four-year period in which the WPA has been in

operation, project sponsors have borne 17.0 percent or \$1,302,837,000, of the total costs of project operations.

### Types of Projects

WPA project work has been conducted almost exclusively through the operation of state work programs. The relatively small amount of work which has been prosecuted through the operation of Federal Nation-wide projects accounted for only 2 percent of project expenditures through June 30, 1939. The Nation-wide projects have been sponsored by Federal agencies and have emphasized white collar activities.<sup>2</sup> Predominant among them have been the undertakings sponsored by the WPA, including the Federal arts projects, the historical records survey, and the study of reemployment opportunities and recent changes in industrial techniques.

TABLE 12. EXPENDITURES OF FEDERAL AND SPONSORS' FUNDS ON WPA-OPERATED PROJECTS, BY MAJOR TYPES OF PROJECTS

| Type of Project                                    | CUMULATIVE THROUGH, AND YEAR ENDING JUNE 30, 1939 |          |                           |          |
|----------------------------------------------------|---------------------------------------------------|----------|---------------------------|----------|

| Parks and other recreational facilities .....      | 737, 871, 455                                     | 9.6      | 196, 004, 716             | 7.7      |
| Conservation .....                                 | 312, 266, 480                                     | 4.1      | 98, 444, 531              | 3.9      |
| Sewer systems and other utilities .....            | 762, 599, 772                                     | 9.9      | 215, 855, 876             | 9.6      |
| Airports and other transportation facilities ..... | 197, 280, 528                                     | 2.6      | 66, 022, 198              | 2.6      |
| White collar .....                                 | 9, 5, 991, 719                                    | 12.8     | 323, 177, 185             | 12.6     |
| Sewing .....                                       | 513, 766, 196                                     | 6.7      | 142, 524, 217             | 5.6      |
| Goods, other than sewing .....                     | 101, 179, 191                                     | 1.3      | 28, 195, 795              | 1.1      |
| Sanitation and health .....                        | 174, 311, 321                                     | 2.3      | 49, 202, 335              | 1.9      |
| Miscellaneous .....                                | 126, 380, 979                                     | 1.6      | 51, 092, 167              | 2.1      |

<sup>2</sup> Includes adjustment of Federal expenditures to total reported by the Treasury and sponsors' expenditures for land, land leases, easements, and rights-of-way, for which the distribution by type of project is not available.

Source: WPA state office reports.

State work program projects are undertakings that have been proposed and sponsored in the areas where the work is done. They are sponsored by state and local public bodies and, to a very limited extent, by Federal agencies such as the Quartermaster Corps, the Bureau

<sup>3</sup> The operation of projects sponsored only by the WPA was discontinued under provisions of the ERA Act of 1939; see page 9.

CHART 3

### EXPENDITURES ON WPA-OPERATED PROJECTS BY MAJOR TYPES OF PROJECTS AND BY SOURCES OF FUNDS

Cumulative through June 30, 1939, and Year Ending June 30, 1939

of Yards and Docks, and the Forest Service. The initiation of the projects in the communities where they are carried on has been the primary factor in adapting the WPA program to the particular needs of each community.

Approximately four-fifths of the total funds expended on WPA projects (82 percent during the last fiscal year) have been used for construction projects. Sewing room operations and white collar work have accounted for the non-construction activities conducted under the WPA. The highway, road, and street projects of the WPA have predominated among the major types of work. Projects of this kind were of even greater importance during the year ending June 30, 1939, than in earlier years. As shown in Table 12, they accounted for almost 43 percent of the project expenditures of the last fiscal year as compared with 38 percent over the entire period.

White collar projects as a group, including the education and recreation programs, research and survey projects, home economics and

LABORERS FROM SUGAR-BEET FIELDS LEARNING TO READ AND WRITE

clerical work, and the Federally sponsored arts program accounted for almost 13 percent of all expenditures both in the last fiscal year and over the entire period of operations. Construction work on public buildings, such as schools, libraries, courthouses, city halls, fire stations, and armories accounted for slightly more than 10 percent of total outlays, and public utility projects, principally for the installment and improvement of sewer and water systems, for a little less than 10 percent. These proportions were about the same in the year ending June 30, 1939, as in the four years of activities, evidence that these kinds of activities were expanded in the last fiscal year at rates equal to the general increase in the scale of operations.

Projects involving the development or improvement of parks and other recreational facilities—such as playgrounds, athletic fields, tennis courts, and golf courses—accounted for 8 percent of the last fiscal year's expenditures. Outlays for sewing projects represented 6 percent of the total. The relative importance of these two major types of projects decreased slightly in the last fiscal year since they accounted for 10 and 7 percent, respectively, of the cumulated totals for the entire period of WPA operations through June 30, 1939. As in the previous years conservation activities, airport and other transportation facility projects, sanitation and health work, and goods projects other than sewing each accounted for less than 5 percent of total project costs.

Considerable diversity exists among the several state programs in the relative importance of various types of projects that have been

undertaken. The highway, road, and street work, which accounted for 43 percent of the funds expended on a country-wide basis in the year ending June 30, 1939, was relatively most important in West Virginia where it accounted for approximately 65 percent of the aggregate, and in Pennsylvania, Arkansas, Tennessee, and Arizona where it represented more than 60 percent of total expenditures. (See Table XVI of the appendix.) Outlays for public buildings, averaging 10 percent for all states combined, constituted 24 percent of the year's disbursements for project work in New Mexico and 21 percent in the District of Columbia and in South Carolina.

The conservation program was most emphasized in Idaho and Rhode Island where it accounted for more than a fourth of project costs. In other New England states, as well as in Rhode Island, expenditures for conservation work were relatively much larger in the last fiscal year than in previous years as a result of the September 1938 hurricane. Sanitation and health work was stressed in the South. With regard to outlays for white collar projects, California, the District of Columbia, New York, and Virginia substantially exceeded the national average of 13 percent.

The differences in the relative importance of various types of projects among the states are attributable to the needs of the communities for the kinds of work carried on, the skills and experience of unemployed workers in the area, and the ability of sponsors to provide materials and equipment for the projects. Inasmuch as expenditures of Federal funds are principally devoted to payments of wages of WPA workers with only the minimum necessary for efficient project operation used for nonlabor purposes, projects involving heavy nonlabor costs have, in general, been undertaken only where sponsors have been able to provide a large portion of the necessary materials and equipment.

## Objects of Expenditure

Wage payments to project employees during the year ending June 30, 1939, amounted to \$1,958,000,000 and comprised 77 percent of the total project outlays of the Federal Government and sponsors. The percentage in the

last fiscal year was approximately the same as the cumulative figure applying to the period from the summer of 1935 to June 1939. (See Table 13.) Most of the wage payments have been made from Federal funds (96 percent in the last year and in the four years of operations). The relatively small amounts provided by sponsors have been used for the wages and salaries paid to specially qualified employees of sponsors who are necessary for the prosecution of projects.

A major portion of the outlays for nonlabor purposes has been used in the purchase of the supplies, materials, and equipment required for project operations.<sup>3</sup> Such expenditures accounted for \$343,000,000 of the \$600,000,000 expended for nonlabor items during the year ending June 30, 1939. Rentals of equipment totaled \$210,000,000; and the various other nonlabor costs of project activities, \$48,000,000. The relative amounts expended during the last fiscal year for purchases of supplies, materials, and equipment (13.4 percent of the total), equipment rentals (8.2 percent), and other items (1.9 percent) were substantially the same as in the entire period of WPA operations. Table 13 reviews the different types of outlays and itemizes the equipment rental total. It is of interest that the major share of the rentals

of equipment related to motor vehicles and to paving and other road-building machinery and equipment.

Sponsors have provided an increasing share of the nonlabor costs of project activities. During the fiscal year ending June 30, 1939, their contributions accounted for 69 percent of the nonlabor total as compared with 59 percent over the entire period of operations. In the last year, sponsors financed 66 percent of the supplies, materials, and equipment that were procured for project activities, and 71 percent of the equipment that was rented.

The differences that appear in the relative amount of sponsors' expenditures on the various types of projects are a result of variation in the

THIS NEW BRIDGE MAKES POSSIBLE A SHORT-CUT BETWEEN TWO TOWNS; ABOUT A SIXTH OF THE NEW BRIDGES BUILT BY THE WPA ARE OF MASONRY.

<sup>3</sup> A discussion of the types of materials purchased and the amounts expended for each appears on pages 116 to 120.

expenditures for the materials and equipment necessary for operating different types of projects. Since there are limitations on Federal funds available for defraying nonlabor costs in excess of minimum amounts, it is necessary for sponsors to meet the larger expenditures on types of projects that require greater nonlabor outlays. This tends to increase sponsors' funds when viewed in percentage terms.

On public buildings and on airport and other transportation projects work which involves relatively large outlays for materials and other nonlabor items sponsors defrayed 22 percent of the total cost from the beginning of project operations through June 1939, as compared to an average of 17 percent on all projects. Sponsors' expenditures on sewer system and other utility undertakings; on highway, road, and street projects; and on sanitation and health work were also well above the average. In the latter two instances the explanation of the relative size of sponsors' expenditures is partly attributable to the location of a considerable share of the work in nonmetropolitan areas where lower monthly earnings are scheduled. Lower earnings in combination with more or less fixed nonlabor costs tend to raise the non-

labor percentage and thereby the relative size of sponsors' funds. White collar projects, for which sponsors contributed but 12 percent of the total amount expended, have required relatively small expenditures for nonlabor purposes; furthermore, these projects tend to be concentrated in urban areas where higher earnings prevail.

During the fiscal year 1939, when the sponsors provided 19 percent of total project costs, their expenditures on airport and other transportation projects averaged 31 percent of the total cost and on public buildings, 24 percent. Sponsors' contributions also accounted for over 20 percent on sewer system and other utility projects, on highway, road, and street projects, and on sanitation and health work. The increase in sponsors' expenditures on white collar projects and on sewing projects was marked, with nearly 15 and 9 percent respectively of the total expenditure being made from sponsors' funds. As was true of the cumulative figures, the assumption by sponsors of a large share of the nonlabor costs of project operations and the levels of wage payments were important factors affecting the relative size of sponsors' contributions. (Appendix Tables XI and XII.)

# NEW ENGLAND HURRICANE AND FLOODS OF SEPTEMBER 1938

THE WPA program had scarcely been initiated before it became necessary to meet unforeseen emergency conditions brought about by floods and other natural forces. In the first and each succeeding year of operations, emergency measures have been undertaken at the time of danger and distress, and subsequent reconstruction activities have been carried on to rehabilitate public properties. During the summer of 1935 WPA labor was used to repair damage caused by floods in seven western states, from Wyoming south and east to Arkansas and Texas, as well as in New York and Pennsylvania. During 1936 the WPA was called upon to cope with emergency flood conditions in the New England States, Pennsylvania, and the Ohio Valley. Intense drought over a wide area in the western states in the summer of the same year necessitated emergency operations for the assistance of many of the people in the areas most seriously stricken. Early in 1937 torrential rains over the Ohio Valley flooded the Ohio River and the Mississippi River from Cairo, Illinois, to the Gulf; this gave rise in 11 bordering states to a situation in which WPA aid was urgently needed. The following year WPA labor combated floods in California and cleaned up after a tornado in Charleston, South Carolina. But the largest task in terms of the population exposed to danger and of the property destroyed resulted from the New England hurricane and floods of September 1938.

Wind and water combined, on September 21, 1938, in the New England States and the coastal section of New York and New Jersey, to bring to that section the worst disaster of its kind in more than a century. Other hurricanes in the United States have taken a greater number of lives but no single storm has ever caused as much property damage. The immediate toll of the disaster included more than 600 deaths, thousands of homeless persons and scattered families, and property damage conservatively estimated at a fourth to a third of a billion dollars.<sup>1</sup>

The hurricane struck Long Island in mid-afternoon, progressed at an unusually rapid rate through Connecticut, Rhode Island, and Massachusetts, and swept over New Hampshire and Vermont with force only slightly abated. Eastern New York and New Jersey, to the left of the hurricane center, and Maine, on the extreme right, were also subjected to violent winds. Moving northerly with a rapid counterclockwise motion, the center of the hurricane reached Long Island with a velocity of about 60 miles an hour. To the east of the hurricane center the forward motion of the storm was added to the counterclockwise air-movement of the

<sup>1</sup> See "Hurricanes into New England, Meteorology of the Storm of September 21, 1938," *Geographical Review* (American Geographical Society), Jan. 1939, pp. 119-127; "Hurricane of September 16 to 22, 1938," *Monthly Weather Review* (U. S. Weather Bureau), September 1938, pp. 286-288, and "The Geography of a Hurricane," *National Geographic Magazine*, April 1939, pp. 529-552. Earlier hurricanes in New England are also described in these publications.

hurricane, producing high wind velocities. In many instances these greatly exceeded the 80-mile-an-hour average along exposed coasts and the 60-mile-an-hour average inland indicated by combining wind components and taking into account loss from contact with the earth's surface. At Milton, near Boston, a wind velocity as high as 183 miles an hour was recorded by the Blue Hill Meteorological Observatory.

The gale was responsible for only part of the damage; water contributed its full share. Along the New England shores the piling up of the "storm wave" of the hurricane was the immediate cause of most of the destruction. Serious enough on its own account, the storm wave was strengthened by the flow of the tide, since the hour at which the storm struck was only a little earlier than the expected time of an unusually high tide caused by the nearness of the moon to the earth and the conjoined action of the moon and sun.<sup>2</sup> The storm wave swept into the downtown section of Providence, Rhode Island, submerging basements of buildings and rising above parked automobiles to the tops of stalled trolley cars. Damage inland was in part the result of the heavy rains that fell for several days immediately preceding and following the hurricane. In the highlands of New England the rainfall amounted to as much as 17 inches during the five days ending September 21. The rains not only softened the soil so that trees were more easily uprooted but also caused very serious floods in the river valleys. Fire likewise took its toll, threatening many communities as a result of short-circuited power lines and broken gas mains, piles of wreckage, and high winds.

### Damage Caused by the Storm

Desolation was greatest along the coast. Summer cottages and even the more substantial permanent residences near the beaches were torn from their foundations and treated at the whim of the elements. Not only were whole settlements swept away, but in many instances the ground on which they stood was washed away by the sea. Debris and sand were strewn

inland by the force of wind and water. Innumerable boats, from small craft to freighters, were broken from their moorings and borne to destruction on the shore. With the force of the gale increasing as the storm moved in from the sea, the hurricane lifted roofs, toppled chimneys, and smashed windows. Trees and telephone poles were broken or torn from the ground, crushing vehicles and buildings beneath them. Thousands of acres of forests were ruined.

Flooded streams brought destruction to river valleys as normally small and harmless water-courses were transformed into formidable torrents. Dams and bridges by the score were washed out. Buildings were flooded and sewer and water systems were damaged. Roads were inundated and in some cases whole sections of roadbed were washed away. Gullies appeared in place of farm-to-market roads. The damage to roads, together with washouts along the railroad beds and badly crippled power and communication lines, temporarily isolated many towns.

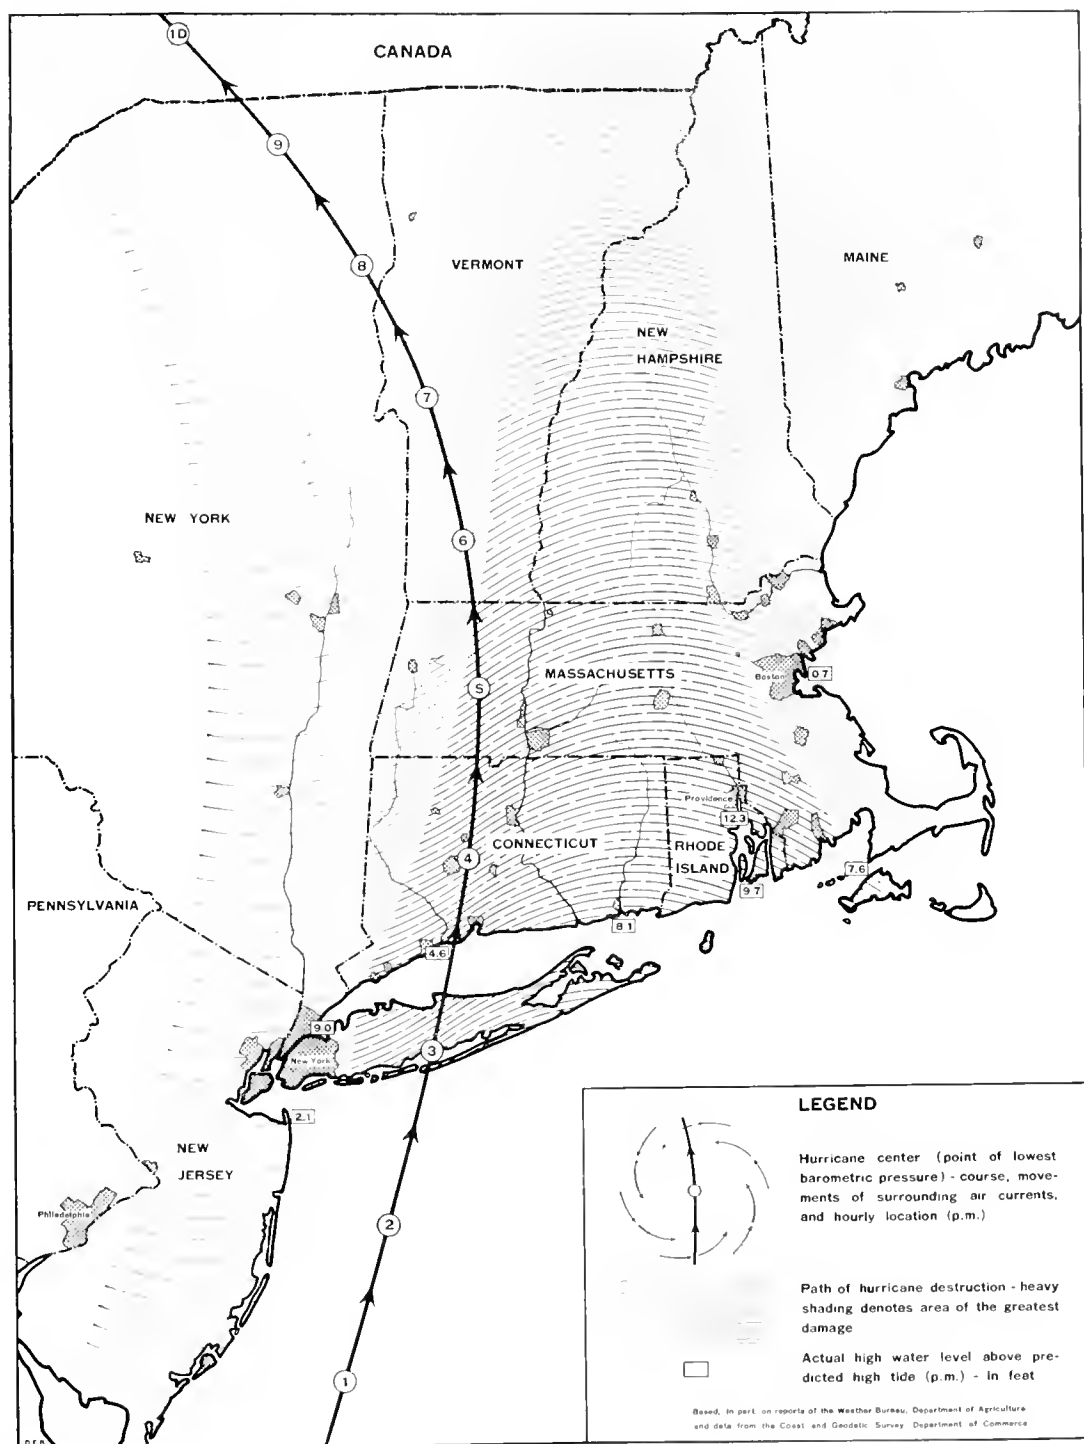

Great crop losses resulted from the storm and floods. Losses of Massachusetts farmers were estimated at \$10,000,000 (including damage to farm buildings); over \$3,000,000 of this was in apple trees alone. Many orchards were destroyed in New Jersey, eastern New York, and especially in Vermont. One-third of the sugar-producing maple trees upon which Vermont farmers depend for a considerable part of their cash income were uprooted. The fact that several decades will be required to replace these trees is indicative of the seriousness of this loss. Damage to timber growths was extreme, particularly in New Hampshire, where whole forests were laid waste. Destruction of farm buildings also was extensive. In Hadley, Massachusetts, 205 out of 300 tobacco barns were blown down and their contents destroyed, and in Connecticut some 400 tobacco barns were demolished.

In a plight even worse than that of the farmers were the thousands of persons whose means of livelihood were wiped out. Numerous manufacturing plants were forced to close down because of the damage to, or demolition of, their buildings and equipment. In some cases normal operations could not be resumed for months. Among the most seriously affected

<sup>2</sup> At Providence, the time of expected high tide was 5:35 p. m.; this may be compared with the time at which the hurricane passed, as shown in the accompanying map.

# NEW ENGLAND HURRICANE

September 21, 1938

WPA 3207

groups were the fishermen who lost their boats and working tools along with their homes.

### Flood Control Measures Preceding the Disaster

The havoc wrought by the hurricane and floods might have been considerably greater had it not been for the preventive measures that were taken when the September 1938 flood danger became imminent and for the flood control work of recent years. In some sections of New England, WPA and state officials were already making preparations to combat major floods before the hurricane struck. Divisions of the Federal Surplus Commodities Corporation were preparing to meet emergency calls for supplies. Women on WPA sewing projects were transferred from their usual assignments to the more urgent work of making sandbags. Local and WPA engineers, profiting by experience in the floods of 1936, started sandbag operations at danger points. Along the Connecticut River at Hartford the threatened break of the dike called for special efforts. Three thousand men were assigned to the task and 250,000 bags were hastily filled. For three days and three nights men piled the bags to a height of five feet and a width of 15 feet, erecting a barricade over a distance of two miles. Through this work, a \$5,000,000 property loss was prevented in the southeastern part of Hartford, according to estimates by city officials. New Britain, Connecticut, was also

protected from floods by the strengthening of Shuttle Meadow Dam by WPA workers.

Greater damage was averted in many places through the many flood control projects of the WPA and other Federal agencies that had been completed after the 1936 flood demonstrated the need for them. River bends heavily damaged by floods in 1936 had been strengthened by riprapping. Dikes and river walls had been built. Channels of rivers and smaller streams had been cleared and deepened. In Vermont, the towns of Montpelier, Barre, and Waterbury were saved by flood control dams which had been constructed by the Federal Government. Although flood waters rose a foot above the peak of the 1936 crest in Fitchburg and Lowell, Massachusetts, recent flood control work prevented a repetition of the 1936 flood damage. In West Springfield, Massachusetts, buildings that had been flooded to the second story in 1936 were protected by the WPA-built Agawam River dike and the Connecticut River wall.

### Agencies Rendering Emergency Assistance

Federal, state, local, and private agencies mobilized their forces to provide assistance at the time of the disaster. Through experience in recent years many of the agencies had knowledge of the needs under such circumstances and of the steps to be taken. The Federal Surplus Commodities Corporation made food and clothing available to distressed communities. The Farm Security Administration turned over its

IN THE WAKE OF  
THE HURRICANE

facilities in the storm-stricken area for relief and rehabilitation of farm families. Offers of financial assistance were made by the Disaster Loan Corporation, an agency financed and managed by the Reconstruction Finance Corporation. The Federal Housing Administration announced that it was empowered to assist in making loans to owners of property in distressed areas.

Meanwhile, the Corps of Engineers, Coast Guard, CCC, NYA, and the WPA engaged in innumerable emergency tasks throughout the area. In view of the emergency broad authority was given WPA state administrators for the operation of emergency projects; regular undertakings were temporarily suspended so that all resources could be thrown into the emergency activities. In some places work was conducted in shifts, and groups of workers were sent from one distressed area to another as fast as progress permitted. Two broad types of endeavor may be distinguished: one in preparing for emergencies and alleviating immediate distress and disorder and the other for rehabilitation of damaged public property.

## WPA Emergency Work

Along with their other preventive activities WPA workers issued warnings and assisted in evacuating danger zones as the threats of danger increased. Later, the work involved rescuing and searching for victims of the disaster and supplying the food, shelter, and medical attention that were urgently needed.

School lunch operations were transformed into emergency feeding activities. In a school-room in East Hartford, Connecticut, the WPA cooperated with local authorities in setting up a portable kitchen in which, for several days, more than 1,500 meals were cooked and served daily to flood sufferers. In Providence, Rhode Island, from September 23 to September 27, the Women's and Professional Division cooperated with the city department of welfare by assigning sewing-room employees to the work of preparing food for 5,000 men engaged in emergency work. Women from the Westerly, Rhode Island, sewing room cooked for the homeless, working in shifts, twenty-four hours a day for a period of five days. Sewing rooms were emptied of their stores of clothing and hospital supplies. Since

CLOTHING MADE IN WPA SEWING ROOMS WAS DISTRIBUTED TO VICTIMS OF THE HURRICANE

no regular distributing centers existed in many of the afflicted communities, commodity depots were set up for the purpose. Food, clothing, and medical supplies were also distributed by WPA workers manning trucks and boats. In Rhode Island alone, reports show that 37,762 garments were distributed during two days to persons in 16 stricken areas. Articles produced on WPA sewing and canning projects and distributed in the states in which they were produced had a value of \$129,790, as shown in Table 14. It must be recognized, however, that this total involves a considerable understatement of the true amount inasmuch as it does not include the value of products sent from one state to another.

Women employed on sewing projects who were not needed in preparing food or making sandbags were shifted to clerical jobs, replacing men drafted for heavier duty. Other women workers served as nurses and aides to doctors and Red Cross workers in attending the injured and preventing the spread of disease.

TABLE 14. VALUE OF PRODUCTS OF WPA GOODS PROJECTS DISTRIBUTED TO VICTIMS OF THE NEW ENGLAND HURRICANE, BY STATES <sup>A</sup>

CUMULATIVE THROUGH JUNE 30, 1939

| State         | Value     | State         | Value          |
|---------------|-----------|---------------|----------------|
| Total         | \$129,790 | New Hampshire | 1,976          |
| Connecticut   | 26,712    | New York      | 11,123         |
| Maine         | 11,000    | Rhode Island  | 12,644         |
| Massachusetts | 36,065    | Vermont       | 0 <sup>B</sup> |

<sup>A</sup> Data refer only to goods produced and distributed within the same state, the value of goods distributed within a state but produced outside that state is not available.

<sup>B</sup> Data for Vermont not available.

Even in sections where the actual toll in life and property was relatively low, the need for maintaining an unpolluted and sufficient water supply was acute. WPA employees repaired broken water mains and assisted in the use of portable chlorinating equipment that was rushed to towns where the water supply had been contaminated. In Massachusetts scores of towns were aided by the portable chlorinators made available by a WPA water pollution survey project. Workers on the project sent samples of suspected water to the state department of health for analysis and posted signs where necessary, warning inhabitants to boil their drinking water.

Although relief work was made difficult at every turn by incessant rain and failure of

communication systems, the disruption of transportation facilities was the greatest handicap of all. Large numbers of WPA employees labored day and night to remove uprooted trees, tangled wires, and debris from impassable thoroughfares; twenty-four hours after the storm, main roads were sufficiently cleared to allow the entry of supply trucks and fire-fighting apparatus into hundreds of communities. WPA forces were also assigned to the erection of temporary bridges—work which in some sections was equally urgent.

Rescue of known sufferers and provision for their welfare were accompanied by long hours of search for persons lost in the storm. Cooperating with employees of other agencies and with volunteers, WPA workers sought victims in the

AFTER THE HURRICANE:  
EMERGENCY CREWS CLEAR-  
ING A BADLY BLOCKED  
ROAD. LEFT AND BUILDING  
TEMPORARY BRIDGE (BELOW).

wreckage of hundreds of demolished homes. Special crews were detailed in boats to search swamps and marshes.

After immediate distress had been relieved, emphasis shifted to cleanup work and safety measures. Under the direction of state and local health authorities, emergency workers pumped tons of water and silt from basements. Whether in private or public buildings, cellars that were considered a health menace were cleaned out and fumigated. Electricians and master plumbers among WPA forces assisted city building departments in inspecting electrical and plumbing equipment to make certain that it was safe for use. The repair of damaged sewers throughout the flooded area served to check the development of unsanitary conditions.

## Rehabilitation Measures

The end of the critical emergency period marked the initiation of a new phase of the emergency activities of Federal agencies. The Farm Credit Administration, the Federal Housing Administration, the Federal Surplus Commodities Corporation, the Public Works Administration, the National Youth Administration, the Civilian Conservation Corps, and the Forest Service, in addition to the WPA, all aided materially in the major task of reconstruction. To draft plans for this rehabilitation work the Federal Administrator of the WPA met with New England Governors in Boston on September 26. Officers of the Corps of Engineers supervising flood control work, Red Cross representatives, and technical experts from state public works departments likewise attended the conference at which technical as well as general aspects of rehabilitation were discussed.

Among the foremost rehabilitation measures was the removal of fallen timber, which had the dual purpose of preventing fire and salvaging lumber. Towards this end the Northeastern Timber Salvage Administration was created through the cooperative endeavor of the Reconstruction Finance Corporation, the Federal Surplus Commodities Corporation, and other Federal agencies. During the six months following the hurricane, 185,000,000 board feet

of logs were sent to the 223 ponds and the 370 sawmills under the control of the Northeastern Timber Salvage Administration. A closely related activity was the work of the 8,000 men in 40 of the New England CCC camps, which stressed the removal of fire hazards left in the wake of the hurricane. Another type of aid supplied by Federal agencies was in the form of extension of credit—this was in order to expedite private rebuilding.

## WPA Rehabilitation Work

Following the September 26 conference certain restrictions on WPA project activities were lifted in New England, and state administrators were given the authority within blanket project limitations to approve work projects having a value up to \$10,000 each. Expenditures on the various kinds of emergency and reconstruction work through June 30, 1939, amounted to \$24,639,000. Largest expenditures were made in Massachusetts (\$12,993,000), Rhode Island (\$4,515,000), and Connecticut (\$3,284,000).

TABLE 15.—WPA EXPENDITURES ON EMERGENCY AND RECONSTRUCTION WORK IN THE NEW ENGLAND HURRICANE AREA, BY STATES

| CUMULATIVE THROUGH JUNE 30, 1939 |              |               |           |
|----------------------------------|--------------|---------------|-----------|
| State                            | Amount       | State         | Amount    |
| Total                            | \$24,639,356 | New Hampshire | 1,926,180 |
|                                  |              | New York      | 622,320   |
| Connecticut                      | 3,283,801    | Rhode Island  | 4,515,252 |
| Maine                            | 100,144      | Vermont       | 1,198,521 |
| Massachusetts                    | 12,993,138   |               |           |

In Connecticut 318 rehabilitation projects (involving Federal funds of \$3,000,000 and sponsors' funds of \$1,000,000) were approved; under these, operations were initiated in practically every section of the state. Fifty-two of the projects were for the rehabilitation of public buildings. One of the building projects involved work on the state capitol at Hartford where the storm had destroyed the copper coping of the capitol, blown slate from the roof, broken the skylights, and weakened the understructure of the statue of the Genius of Connecticut on the dome. Removal of the 20-ton bronze statue was one of the most difficult assignments that the WPA engineers faced in the rehabilitation work in Connecticut.

A KIND OF REHABILITATION THAT WAS NECESSARY IN MANY NEW ENGLAND TOWNS

It was necessary to cut the figure into sections, each of which weighed hundreds of pounds.

The WPA renovated 300 public buildings in Rhode Island that had been damaged by wind and water when the hurricane struck. Besides the work on the buildings themselves, it was necessary to restore the records kept in the basements or on ground floors after they had been drenched by water. Recovered documents were artificially dried and sterilized and then copied by WPA workers. Twenty workers were assigned to the retyping of 100,000 government records in Providence. Among these were the files of the Rhode Island and the United States Employment Services and the records of the board of canvassers of Providence. Registered voters in two wards of the city could not have exercised their right of franchise without reregistration if the records of the board of canvassers had not been restored.

The refloating of the ferryboat "Governor Carr" was one of the major rehabilitation projects in Rhode Island. This boat was the property of a municipally owned corporation and was the only ferry between Jamestown and Newport. When the storm beached the craft at a 45-degree angle on a shale ledge and disabled the ferry to Saunterstown, Jamestown was left without means of transport to the mainland. A WPA project was approved for righting the 550-ton boat, and the United States Navy supplied a substitute until service could be resumed by the "Governor

Carr." Working with the tide and the weather, the salvage crew (varying from 16 to 30 men) completed the job in 39 days. Work on the project included the construction of a 300-by-18-foot launching track and the rebuilding of damaged seawalls as well as the actual righting of the boat. Among other rehabilitation work performed by the WPA in Rhode Island was the reconstruction of seawalls at Newport and Narragansett and of various piers requiring the placement and jetttying of several hundred piles.

Within a month after the hurricane 521 projects under a \$5,000,000 blanket rehabilitation authorization had been approved in Massachusetts. By the first of March, WPA workers had renovated 346 buildings, cleared 10,189 miles and built or reconditioned nearly 200 miles of roads, built two bridges and reconstructed 26, built 40 culverts and reconditioned 272, restored 37,980 linear feet of sewers, installed 3,800 and replaced 650 feet of water lines, and cut and removed 161,700 fallen trees to mention only part of the accomplishments. In North Adams where the Hoosac River had washed away 300 feet of Front Street, leaving nine houses literally hanging over the edge of the river, WPA workers filled in the roadbed, resurfaced it, and built a 480-foot supporting wall. In Pittsfield culverts and bridges were restored and a 145-foot retaining wall was constructed.

THE MUNICIPALLY-OWNED FERRY "GOVERNOR CARR" WAS REFLOATED AND RECONDITIONED BY WPA WORKERS

By February 18, WPA workers in Vermont had cleared 796 miles of roads and trails, 712 acres of land located within 100 feet of buildings, and 2,805 acres of land constituting fire hazards and lying within 50 feet of public highways. This was in addition to the clearance and repair work done by local public agencies. Of the 75,000 to 100,000 acres of forest in Vermont that would be considered extreme fire hazards as a result of the blown-down timber, 15 to 20 percent had been cleared by the first of March. Where demolished lookout towers on some of the mountains made fire protection more difficult, WPA work also contributed to fire prevention. The erection of one of the new towers, on Elmore Mountain in Vermont, was complicated by its location. Steel framework and concrete mixing materials had to be hoisted over an overhanging ledge in getting them to the site at the top of the mountain.

In 153 New Hampshire towns the WPA rebuilt roads and streets, sewers, water mains, and bridges. Projects for the reduction of forest-fire hazards were operated in 74 localities. Rehabilitation measures most extensively undertaken in Maine were for the removal of

timber from forest and recreation areas, the opening of roads and trails, and the restoration of forest telephone lines.

### Project Employment Provided

On September 28, 83,000 WPA workers were engaged in emergency and reconstruction activities occasioned by the September hurricane and floods. Nearly half this number (40,000) were in Massachusetts, as shown in Table 16. The smaller but even more severely afflicted states of Connecticut and Rhode Island had 22,000 and 10,000, respectively.

Since a large part of the need for extra labor was due to emergency situations arising immediately after the disaster, a smaller force was required in subsequent weeks. By October 19 the number of WPA workers employed on emergency projects had been cut almost in half, the greatest decreases occurring in Massachusetts and Connecticut. Work in Rhode Island required a fairly constant number of WPA workers until the middle of November, when the emergency employment decreased by about 5,000 workers. Employment in the other stricken states increased after the middle of

TABLE 16.—NUMBER OF PERSONS EMPLOYED ON WPA EMERGENCY AND RECONSTRUCTION PROJECTS IN THE NEW ENGLAND HURRICANE AREA, BY STATES

SEPTEMBER 28, 1938, TO JUNE 28, 1939

\* Employment during previous week.

October, reflecting the initiation of reconstruction projects. The peak of the upward movement in all the states was reached on November 9, at which time more than 60,000 WPA workers were employed on reconstruction projects.

A large proportion of all WPA workers in states affected by the storm were employed on emergency and reconstruction projects. Nearly 73 percent of all the WPA workers in Connecticut on September 28 were so employed. In Rhode Island and New Hampshire the proportion of WPA workers employed on emergency and reconstruction projects averaged more than 50 percent during the eight-week

period beginning with the last week of September. WPA employment in the other states also reflected the importance of emergency and rehabilitation activities. (See Table 16 on the preceding page.)

No one task performed by the WPA and other agencies in connection with the hurricane and floods of the fall of 1938 can be singled out as preeminent. Flood prevention measures precluded additional hardships, rescue work and the provision of food and clothing alleviated suffering, and clean-up work and rehabilitation activities gradually brought order and restored damaged property in an area temporarily stunned by disaster.

# WPA PROJECT OPERATIONS IN SELECTED AREAS

**D**IFFERENCES in the WPA program in the many communities of the country are the result of the kinds of WPA operations proposed by the sponsoring agencies of the localities, the manner in which the undertakings are prosecuted, and the variety in the benefits that result from the completed project work. These differences are obscured in a Nation-wide treatment of the WPA. The surveys developed below are designed to illustrate this aspect of WPA activities by describing the actual operations of the WPA in four specific areas.

The surveys cover WPA project operations in quite different parts of the country. Two rural counties are included among the descriptions of the community programs of the WPA. The first is Mahaska County, Iowa, which lies in the heart of the country's corn belt. Escambia County, Alabama, on the other hand, is in the deep South. Of the two cities surveyed one is medium-sized with 45,000 inhabitants (Portsmouth, Ohio). The other is a larger city of 115,000 inhabitants (Erie, Pennsylvania) which has many of the characteristics of the country's industrial centers.

The project operations of the selected areas typify in essential respects the operations conducted by the WPA in many parts of the country. Each of the four areas is more or less representative of comparable local govern-

mental subdivisions in corresponding parts of the country. As a group the surveys illustrate the varied settings in which most of the different kinds of project work have been done. They touch upon the conditions which have led to the proposal of particular project undertakings, the participation of the various local public agencies which sponsor the projects, the actual manner in which the work has been carried on, and the specific benefits that have accrued to the community from the work performed.

The reviews of WPA operations in the four areas have been limited to accounts of the project work itself. No attempt has been made to describe the persons given jobs or the meaning of WPA employment to them and to their families. Passing mention is made, however, of the number of jobs provided and the extent of unemployment.

The summaries cover WPA operations only. They do not include the work performed under the earlier work programs as conducted by the Civil Works Administration and the Federal Emergency Relief Administration. Neither do they include the work performed under agencies concurrently operating work projects, such as the National Youth Administration, the Public Works Administration, the Civilian Conservation Corps, and the other Federal agencies that carry on project operations.

## MAHASKA COUNTY, IOWA

Mahaska County is a 364,000-acre expanse of fertile, slightly rolling, farm land in the south-central section of Iowa. The county's farms produce an abundance of corn, small grains, and hay. These principal farm crops are largely fed to hogs and beef cattle—the primary farm products supplying cash income. Important productive activities in addition to farming are carried on in the small factories, creameries, and poultry hatcheries of the county.

According to the 1930 Census of Population, the county had 25,800 inhabitants, nearly half of whom (11,600 persons) lived on farms. Non-farm residents were largely concentrated in Oskaloosa—the county seat, a college town, and the marketing center of the county—which had a population of 10,000. Small towns scattered throughout the county include New Sharon in the north-central part, originally a Quaker settlement; Fremont to the southeast on the divide between the Des Moines and Skunk Rivers; Beacon, near Oskaloosa in the central section, once a thriving coal mining community; and Rose Hill, the center of a purebred hog- and cattle-raising area near Lake Keomah State Park in the east-central part of the county.

Approximately 9,500 persons were engaged in gainful occupations in Mahaska County in 1930. Agricultural workers accounted for more than 4,000 of the gainfully employed; retail and wholesale trade, over 1,000; and persons employed in factories, nearly 700.

Despite the location of Mahaska County in one of the most fertile agricultural sections of the country, the economic status of the county's residents has been adversely affected in recent years by the low prices received for agricultural products, the droughts of 1934 and 1936, and the depressed levels of general business activity. None of the five banks operating in Oskaloosa in 1932 survived the bank crisis; they have been replaced, however, by two new banks and a home loan and savings association. Such is the general setting of the unemployment problem of the county; in Oskaloosa conditions have been accentuated during the past year by the shutting down early in 1938 of an overall factory which employed over 100 workers.

At the time of the unemployment census in November 1937, 929 persons between the ages of 15 and 74 (including 384 WPA and other emergency workers) registered in Mahaska County as totally unemployed and 530 more registered as partially unemployed. About a fourth of the totally unemployed who had work experience reported themselves as common laborers, and nearly a fifth as farm laborers or farmers. Only slightly less numerous than the agricultural workers were two other groups of registrants—skilled workers and foremen, and semiskilled workers.

Many of the unemployed in Mahaska County have been given work on WPA projects since the initiation of the WPA program. In total, 1,130 different workers held project jobs at some time between the beginning of operations in November 1935 and March 31, 1939. The number working at any one time, however, has ranged between 300 and 650 workers. These persons have been grading and widening farm-to-market roads, digging sewer ditches, developing parks, making garments for needy families, and doing the many other kinds of work that have been carried on under the WPA. The results of this work have added materially to the public facilities and social welfare of the county.

### Construction

#### Road Work

The road system in Mahaska County, as in the rest of Iowa, has been greatly improved during recent years through the regular road work carried on in the state. To a large extent this improvement and maintenance work has been directed towards the building and upkeep of primary (state or Federal) roads, which are state-maintained. Seventy of the eighty-six miles of primary roads in the county were paved by the end of 1938, and the remainder were graveled, according to reports of the state highway commission.

Responsibility for the 1,105 miles of secondary roads in the county, however, rests on the

county. It is these farm-to-market roads that have been developed through WPA project operations. Before the WPA program was begun the condition of the secondary roads varied greatly. Some had been graded and surfaced, but well over half were still unimproved dirt roads. Travel on unsurfaced roads in Mahaska County becomes exceedingly difficult during rainy periods. Deep ruts appear in some sections of the roads making two-way transportation practically impossible. Frozen surfaces on rough roads cause discomfort to motorists and greatly increase the operating cost of cars and trucks. In the spring, especially after very heavy snow and rainfalls, such bad mudholes often develop that traffic is blocked.

WPA work in Mahaska County has already done much to improve road conditions through the farm-to-market road projects that have been prosecuted in every township of the county. By the end of March 1939 extensive grubbing and grading had been completed; a total of about 100 miles of secondary roads had been surfaced with crushed stone and 245 miles resurfaced. The accompanying map shows the location of roads on which work has been done.

TABLE 17. NUMBER OF PERSONS EMPLOYED ON WPA-OPERATED PROJECTS, BY TYPES OF PROJECTS AND BY SEX

| MAHASKA COUNTY, IOWA<br>MARCH 27, 1939   |       |     |       |
|------------------------------------------|-------|-----|-------|
| Type of Project                          | Total | Men | Women |
| Total                                    | 501   | 136 | 65    |

| Education                                | 3     | 2   | 1     |
| Recreation                               | 9     | 4   | 5     |
| Professional and clerical                | 8     | 3   | 5     |
| Housekeeping aide                        | 19    | —   | 19    |
| Sewing and other goods                   | 35    | 1   | 34    |
| Surplus commodities                      | 3     | 2   | 1     |

Although some of the work has been limited to dressing and surfacing fairly well-built roads, much of the mileage improved by the WPA consisted of unimproved dirt roads. When work was done on such roadways the WPA undertook practically the building of new roads. Care has been taken to see that each section of road on which work is initiated will serve as an outlet to a surfaced road.

Since the rights-of-way for some of the road sections were not sufficiently wide to permit building to the width desired for improved roads in the county (66 feet with a 26-foot road width) it was necessary to acquire strips of land along the roadside. Owners of adjoining farms have in general made land available for this purpose without charge. In return, WPA workers moved the farmers' fences back from the road to the edge of the new right-of-way. The newly acquired strips of land were then cleared preparatory to ditching and grading. Bushes were grubbed, trees felled, and stumps removed along the rights-of-way.

Steep grades have been eliminated and sight distances lengthened by cutting the higher rises and filling the hollows. The dirt excavated from roadside ditches, which are made at least six feet wide, has been used fully in making fills. WPA workers have done a large amount of both the grubbing and the excavating with hand tools but the county has usually provided the equipment and machinery required for the heavy cutting in addition to some foremen and a few special machine operators. The crushed rock required for the road surfacing has been obtained from rock quarries in the county and has been hauled in county trucks from the nearest quarry to the locations where it is laid.

Proper drainage of the roads has frequently necessitated the installation of culverts and bridges. From the beginning of the program through March 31, 1939, WPA workers had constructed 635 culverts and had built 12 new bridges (four wooden, seven steel, and one masonry) and reconstructed 31 in the county.

Although the great share of the work done on transportation facilities in Mahaska County has been on farm-to-market roads, the WPA did undertake a small amount of street repair work in Oskaloosa late in 1936. Bricks were removed, cleaned, and relaid and the base repaired on 1,500 feet of brick-surfaced streets. The various kinds of road improvement activities have occupied the majority of WPA project workers ever since the initiation of the program. This type of work provided employment to nearly two-thirds of the 501 WPA workers who were employed in the county during the last week of March 1939.

## County Road Equipment Building

For a road system as extensive as Mahaska County has, a considerable amount of road equipment is required. Proper care of the equipment is a matter of importance and one that has been made difficult in Mahaska by the lack of adequate space for storage and maintenance. So far, the county's road machinery and supplies have been housed in two old barns. These barns, which are located two miles outside of Oskaloosa, are poorly lighted and have few facilities for repair work. The county highway department needed not only a heated, well-lighted, and properly equipped repair shop but also storage space safe from petty thieving and the effects of weathering. Furthermore, if storage space were adequate and safe, savings could be realized from quantity purchases of such supplies as lumber, cement, nails, oil, and grease.

Under a county-sponsored WPA project, operations started in November 1938 on the construction of a \$32,000 road equipment building for the county for 25 years. The building is in the shape of an L with a front two-story section, 60 feet wide and 32 feet deep. In the rear is a one-story section 33 feet wide and running back 48 feet.

On the main floor of the two-story front section are an office, a storage room having racks and shelves for tools, tires, and other supplies, a small, well-equipped workshop, and a larger workshop into which machinery can be brought for repair. The second floor is adaptable as an office for the county engineer or as extra storage space; a heating unit is in the basement. The rear section provides storage space for road machinery. Doors are large enough to admit trucks, graders, and other pieces of heavy machinery so that truck loads of materials may be driven in and unloaded and large pieces of equipment may be repaired under shelter.

Special arrangements have been made for the storage of lumber (used principally in building bridges and one of the major materials purchased by the county) in a manner that will tend to prevent pilfering and reduce damage from weathering. Plans call for the enclosure of an area 114 feet by 174 feet adjoining the

CONSTRUCTING A BUILDING TO BE USED IN THE HOUSING AND MAINTENANCE OF COUNTY ROAD EQUIPMENT

road equipment building by a seven-foot stone wall with projecting arms at the top supporting three barbed wires. A series of concrete docks above adequately drained ground are provided for piling the lumber. Three loading platforms, located along the railroad tracks just north of the enclosure, will facilitate transfer of lumber from railroad cars to the storage docks.

The road equipment building is situated at the edge of the town, in the residential section near Penn College. Efforts have, therefore, been directed towards making the building thoroughly attractive as well as useful. The native rock is laid with attention to design and landscaping of the entire grounds will follow the construction work.

## Edmundson Park Development

The development of 56½ acres of pasture and field into a well-equipped park is one of the outstanding projects in Mahaska County. Park areas supplied with recreational facilities and available to the people of Oskaloosa and nearby communities were, for practical purposes, limited to the state park at Lake Keomah. This park is located five miles from Oskaloosa and offers fishing as its chief attraction.

Purchase of land for Edmundson Park was made possible by the use of \$20,000 bequeathed to Oskaloosa by the son of the first sheriff of Mahaska County, for whom the park is named. The city council, sponsor of the project, selected a site in the southwest section of Oskaloosa where numerous large trees, slightly rolling ground, and a winding creek contributed

to the suitability of the area as a site for park development.

Activities on the park project began on December 6, 1935, with the removal of fences, dead trees and brush, and buildings. Two houses were moved to the new PWA-built sewage disposal plants and, as described below, reconstructed into homes for the plant attendants. An old barn and 4,100 feet of fence were torn down and some of the salvaged materials were utilized in erecting the park buildings.

On the park grounds project workers built a bathhouse and swimming pool, a playground (equipped with swings, slides, and a merry-go-round), a picnic area, an outdoor theatre and bandshell, and a softball field. All the buildings are of native limestone and include, besides the bathhouse, a concession building, rest rooms, shelters, and a covered waiting station on the bus route. Drinking fountains, outdoor ovens (made principally of native stone), rustic benches, and picnic tables have been built throughout the park. With a seating capacity of 500 persons, the outdoor theatre can accommodate a much larger audience by use of the surrounding grassy slopes.

Approximately two miles of winding drives were laid out, graded, and cindered, and 15 culverts were installed. Almost 2,300 linear

feet of concrete sidewalks were laid and many paths cindered. Small footbridges of rock and timber span the creek which runs through the park. Just above the main drive the stream was dammed to provide a small lagoon, the overflow from which falls down in cascades. To minimize the erosion of the stream bank, retaining walls were built.

Work on the swimming pool, the park's chief attraction, started in July 1936 and was completed for public opening of the pool on July 4, 1937. The pool is 150 feet long and 75 feet wide and ranges in depth from  $2\frac{1}{2}$  feet to  $9\frac{1}{2}$  feet. In accordance with regulations of the state department of health it has a purification system capable of recirculating all of the water in the pool every eight hours. The city provided over \$22,000 of the total \$52,000 outlay for the pool and the 53- by 100-foot bathhouse. A concrete and stone bleacher section built along a bordering terraced area is large enough to seat 330 spectators. Electric lights were installed for night use of the pool and a parking lot accommodating 200 cars was built and equipped with lights.

Equipment of the park with drinking water and sanitary facilities required the installation of 5,492 feet of water mains, 100 feet of 10-inch sanitary sewers, and manholes for both the water supply and the sewer systems. In landscaping the park, WPA workers set out approxi-

PART OF EDMUNDSON PARK, THE NEWLY DEVELOPED 56-ACRE RECREATIONAL AREA NEAR OSKALOUSA

mately 7,000 trees, shrubs, and plants. To a great extent, those that were killed during the 1936 drought have been replaced. The land and development of the park (exclusive of the swimming pool and bathhouse) cost \$117,000—\$85,000 for wages, \$20,000 for land, and \$12,000 for other nonlabor items. More than 1,500 tons of native rock from local quarries were required for the buildings, fountains, entrances, and other stone work. Timber used in the buildings and bridges came chiefly from trees and buildings cleared from the park site and from 100 oak trees purchased by the park board.

Since the opening of the park, attendance has averaged 500 or 600 persons daily, with crowds of 4,000 to 5,000 on Sundays and holidays. Persons coming to the park include not only the residents of Oskaloosa and of neighboring localities, but also parties from a much greater distance.

The WPA has not limited its park work in Mahaska County to the Oskaloosa development. Park projects have also been operated at New Sharon and at the state park at Lake Keomah. Workers improved the 20-acre town park at New Sharon, erecting a bandstand for summer concerts and an enclosed shelterhouse, grading and surfacing with crushed rock about one-half mile of drives, and constructing a football field, tables, and benches. The project at Lake Keomah State Park (a 352-acre tract including a 70-acre lake) was sponsored by the Iowa State Conservation Commission and involved reforestation and other improvement work.

## Sewers

Projects for the extension of sewer systems have been in operation in Oskaloosa almost continuously since the initiation of the WPA program. Most of the work has been done near the outskirts of the city in sections which lacked sewer facilities. By the end of March 1939, WPA project employees had laid nearly 23,000 feet of sanitary and storm sewer lines, with conduits ranging from small pipes 8 inches in diameter to large storm sewers 42 inches in diameter. About 90 manholes and catch basins were also installed.

In Oskaloosa, as in many growing cities, the original sewer system required extension and enlargement to serve the increasing population. Moreover, untreated sewage was run into a creek, a procedure which endangered public health. This condition resulted in the erection of two disposal plants as Public Works Administration projects and the laying of mains through projects of the FERA and the WPA.

Previously both the storm and sanitary sewage had been emptied into a single outfall. New outfall sewers to the disposal plants were installed by the WPA in such a way that the storm sewers empty into the creek as before but the sanitary sewage is carried to the new plants. Thus the load on the outfall sanitary sewers is greatly lessened. When the present WPA projects are completed, the sewer system should be adequate for 15 or 20 years.

The two PWA sewage disposal plants are located just outside the city limits, one to the northeast and the other to the southwest of the city. When activities started on the park projects in October 1935, WPA workers moved two farm houses from the newly acquired park grounds to sites at the disposal plants, remodeling the houses into homes for the plant attendants. The work included new foundations and new roofs for both houses and new exterior walls of shingles for one. These improvements, together with the installation of plumbing, complete refinishing of interiors, and painting, converted the houses into attractive modern dwellings.

Grounds at both plants were graded and enclosed with a high, woven-wire fence. Shrubs and grass seed were planted and concrete sidewalks and paths were laid. Ornamental entrances were built of native rock. At the northeast plant the WPA built a shelterhouse and replaced an old wooden bridge with a 15-foot steel structure. In the grove adjoining the southwest plant two picnic ovens were constructed.

## Gymnasium-Auditorium

As a result of the gradual consolidation of rural schools in Iowa, construction of school buildings has not been featured in the state as it has in some sections of the country where school construction represents a very important

WPA-BUILT GYMNASIUM AT CEDAR

phase of WPA work. The one-room district schools have gradually given way in Mahaska County, as in the state generally, to consolidated schools which provide for high-school training as well as for grade-school work. Recent growth in attendance and expansion of school activities, however, have rendered some of the buildings inadequate for current needs.

The consolidated school building at Cedar, a village south of Oskaloosa, is illustrative of this situation. The gymnasium was too small for a standard-sized basketball floor and the only space available for spectators was a small balcony on one side. The boundaries of the court were only a few feet from the wall, and two columns under the balcony added to the danger of injury to the players. Inasmuch as high-school games and tournaments constitute the major recreational interest of the entire community during the winter months, the need for an adequate floor was felt keenly. Moreover, the school building had no auditorium for dramatics and musical productions, for graduation exercises, and for other school or community programs.

Under the sponsorship of the consolidated school district of Cedar an auditorium-gymnasium has been added to the school building. The district assumed half (\$10,957) of the total cost of \$21,507. The new brick-and-tile structure is approximately 72 feet square and provides a 40- by 50-foot floor that can be used either for basketball or as an auditorium. Elevated seats extending along the entire east side of the room, a balcony over the lobby at the end, and the floor of the stage on the west

side furnish ample accommodations for spectators at ball games. The stage is flanked by two dressing rooms. Sound-absorbing wall-board on the ceiling and upper walls and cinder brick in the lower part insure good acoustic effects. High-school and older grade-school students make greatest use of the new gymnasium, leaving the old gymnasium for the younger children.

## Other Projects

Major alterations were made on the Mahaska County courthouse. The courtroom was larger than its use required and sound carried very poorly. Through a project carried on in the autumn of 1937, the ceiling of the courtroom was lowered about six feet, the walls were covered with sound-absorbing board and the floor was relinished. Four offices for the judge and other officials were partitioned off from the courtroom. Walls, ceilings, and floors throughout the rest of the building were reconditioned and additions were made to the plumbing and heating systems. In 1936 improvements were made on the Oskaloosa high-school building, and the surrounding grounds. Through other project operations the interiors of the five Oskaloosa school buildings, the county courthouse, the county hospital, and the city hall were renovated.

Under community sanitation projects sponsored by the United States Public Health Service and the state department of health almost 392 sanitary toilets were placed in public parks, on rural school grounds, and, where the owners met all costs of materials, on private property. The expenditure of \$7,400 by the sponsors, through March 1939, was largely for materials and practically all of the \$13,200 paid out from Federal funds went to project workers.

## Professional and Service Work

Sewing room operations and professional and service projects are currently providing employment for about 15 percent of the WPA workers in Mahaska County (74 out of 501 employed during the last week of March 1939). Although two-thirds of the nonconstruction

workers (mostly women) are assigned to the sewing project or as housekeeping aides, the white collar program in the county is quite diversified, encompassing a recreation program, units of the writers' and music projects, adult education classes, bookmending, a Braille project, and clerical services. Related activities, besides the building renovation projects mentioned above, include projects for the distribution of surplus commodities and a subsistence garden.

### Recreation, Federal Arts, and Education

The State Board of Control sponsors the WPA recreation project in Iowa. In each community in which a unit operates a lay committee composed of interested citizens from various clubs and occupational fields serves as cosponsor and works directly with the project supervisors. The committee in Oskaloosa, where the Mahaska County project is located, secured space at the city hall for a recreational center and obtained the use of the workshop and reading room at the YMCA and use of school playgrounds.

Leather work, plastic art, finger painting, flower craft, metalwork, and clay modeling, and some woodwork are included among the phases of the handicraft work conducted at the recreation center at the city hall. The center has facilities for indoor games, a novelty orchestra, and a puppetry club. Such types of activity are popular in the winter; in the summer, however, chief interest attaches to sports—softball, swimming, paddle tennis, croquet, and horseshoe pitching. Handicraft is popular the year round.

Under the leadership of eight project workers, between 700 and 800 persons participate during the summer and from 400 to 500 in the winter. One of the regular school physical training teachers is retained by the school board through the summer to work with the WPA leaders.

The Federal writers' project began operations in Mahaska County in December 1935. Through this project WPA employees prepared a guide to Pella, a town in an adjoining county noted for the annual tulip festival held in the tradition of its Dutch settlers. They also conducted a survey of coal mining in Mahaska, once a large

coal-producing county. The survey covers the location of the mines—both the few that are still active and those that have been abandoned—the techniques used in the mines, and the physical aspects of the mining communities. In many instances these communities have become "ghost" towns following the exhaustion of most of the coal veins 10 or 12 years ago. Material relating to Mahaska County was compiled for inclusion in the Iowa guide book published in August 1938, an Iowa encyclopedia, an Iowa almanac, a history of sports, and state-wide social-ethnic studies.

A unit of the Federal music project was initiated in Beacon. Opportunities to study music have been scarce in this impoverished mining community, in which the majority of residents are Welsh, a nationality noted for its musical interest and ability. Through the project, group classes in instrumental music have been conducted in cooperation with the regular school curriculum.

MAJOR ALTERATIONS MADE TO COUNTY COURT ROOM INCLUDED LOWERING THE CEILING AND COVERING WALLS WITH SOUND ABSORBING BOARD

The adult education program in Mahaska County is sponsored by the Iowa Department of Public Instruction as a part of a state-wide project. It is cosponsored by the Oskaloosa school board, which has supplied rooms, desks, and other facilities. Citizenship classes for aliens who desire to become citizens have been operating since January 1936. These constitute the most important phase of the work and include classes in English and civics held three nights a week in the high-school building. During the past year an average of 18 persons, largely from the mining districts, have been enrolled. Ten persons who were members of the classes have become naturalized citizens.

In addition to the citizenship classes, two types of adult education classes are in current operation. From 50 to 60 enrollees receive instruction in instrumental music. An adult sewing class provides training in selecting and cutting patterns, making over garments, and other phases of sewing.

### Clerical

Several different kinds of work have been carried on through the operation of clerical projects. On the bookmending project 1,396 school books had been cleaned and mended by April 1939 and 300 volumes had been cataloged. Thirty-four volumes of Braille transcription had been completed for distribution to blind readers through the state traveling library. Considerable work has also been done in indexing and tabulating records in the offices of the county clerk, treasurer, recorder, and superintendent of schools.

In 1936 the tax records and assessed valuation for real property in the various counties in Iowa were analyzed in order to determine the probable effect of a homestead tax exemption law. The findings in Mahaska County were incorporated with material from other counties of the state into a report which was utilized by members of the 1937 state legislature in framing the Homestead Tax Exemption Bill. Mahaska County is also participating in a survey to provide a complete file of the names, war records, and other facts relating to war veterans whose graves are in Iowa, which in addition to identifying the graves of the

veterans will supplement the vital statistics of the state.

### Housekeeping Aide Project

Outstanding among the service projects operated in Mahaska County is the work of the housekeeping aides. Under this project an average of 18 aides have been employed ever since March 1936. Women assigned as aides are sent to the homes of the needy to give assistance in housework and related home problems when the housewife or homemaker, because of illness or childbirth, is temporarily unable to perform the minimum household duties that are essential.

Each week the supervisor of the project makes out a program for the aides. Some families are given assistance over a considerable period whereas for others the need is of short duration. Families requiring household assistance are referred to the project supervisor by the county relief agency, with recommendations as to the number of days a week and length of period during which aid should be given. The purpose of the project is to serve only emergency cases but in some instances a limited amount of time each week is given to chronic cases. A tabulation of the visits made during the last week of March showed that 96 visits were made to 20 families. Eighteen of these were families where the homemaker was ill.

The work of the aides includes general household duties, care of small children and infants, simple home nursing (only under the direction of a doctor or public nurse), washing and ironing, sewing, and mending clothes and bedding. While doing the necessary general work the aide also does what she can to make the home neater and more attractive.

### Subsistence Gardens

Persons receiving general relief and families of WPA workers are encouraged to garden under the subsistence garden project sponsored by the county relief administration. It has not been necessary for the county to rent land for this purpose since a sufficient number of plots of unused land have been supplied by

interested citizens. Although the standard subsistence plot is 50 feet by 100 feet the garden areas actually worked depend somewhat on the size of the lots made available. Seeds, hothouse plants, seed potatoes, and insecticides are furnished by the county to persons receiving relief. Although families of WPA workers are not supplied with seed, they are encouraged to garden and are given the same supervision in their work as are the relief clients. WPA workers who are assigned as gardeners see that families get proper seeds and plants; the latter, chiefly tomato and cabbage plants, are raised in hotbeds by the project gardeners. The gardeners also supervise all plots, showing the inexperienced how to cultivate their gardens and how to use insecticides. In the spring of 1938, 378 gardens were planted.

### Sewing Project

Approximately \$69,000 has been expended on the county-wide sewing project located at Oskaloosa; this kind of work has furnished the majority of the WPA jobs for women. Workers on this project not only make clothing and bedding sufficient to meet most of the needs of the relief recipients in the county but they also supply articles for the county home and the county hospital. The 23,500 garments made for needy persons between November 1935 and March 31, 1939, included practically all types of women's and children's wear

except coats and other articles of heavy material. For men and boys, shirts, pajamas, shorts, and overalls (small sizes only) have been made. Comforters have been the most common item of bedding produced on the project.

Articles prepared for institutions (7,700 articles through March 1939) are made according to specifications supplied by superintendents of the institutions. All sewing machines in use on the project are of the treadle type. About two yards of cloth are currently furnished by sponsors for each yard procured by the use of Federal funds.

### Surplus Commodities

Workers on projects for the distribution of surplus commodities to needy families check all incoming consignments and issue the commodities to recipients. Families of WPA workers as well as families on general relief receive surplus commodities. Among the kinds of food distributed are navy beans, corn meal, graham flour, wheat flour, butter, and fruits such as grapefruit, oranges, and sometimes prunes.

In Oskaloosa members of relief families usually come to the headquarters of the project (a room in the basement of the courthouse) to receive their allotments. When all members of a needy family are confined to their home the commodities are delivered by the project workers. For persons in other parts of the county the food is transported in county trucks from

SWIMMING POOL  
AND BATHHOUSE  
BUILT BY WPA IN  
EDMUNDSON PARK

the project center in Oskaloosa to local grocery stores. Each store manager, like the project workers in Oskaloosa, has a list made out by the county relief agency of those families to whom the surplus commodities are to be given. The local grocery men receive no compensation for their work in connection with distribution of commodities.

The county relief administrator, who supervises the distribution of surplus commodities, is also responsible for the distribution to relief recipients of clothing produced in the WPA sewing rooms. Articles needed by the individual families are ordered specifically by case workers, who indicate the kind of garment and the size required. If the articles are not in stock orders for them are sent to the sewing room. In addition to the current distribution of garments made on the sewing project, the coats, suits, and other items of clothing purchased under the ERA Act of 1938 were issued to families in need during the autumn and winter of 1938-39.

The selection of the projects undertaken in Mahaska County, as in the rest of the Nation, has been determined by the specific needs of the community, the amount of funds available, and the skills and occupational backgrounds of the workers on the relief rolls. The predominance of road work among the WPA activities is indicative of the outstanding need for better farm-to-market roads in the county. Such work accounted for 68 percent of expenditures for construction activities, including sanitation and health work, through March 31, 1939, as compared to 49 percent for the country as a whole.

The greater accessibility to schools, churches, and trading and social centers that is provided by improved secondary roads is a very real

contribution to the residents of the county. In addition, the possibility of using trucks at any time of the year to transport cattle and hogs to market means much to the farmers of this particular rural county. The road projects, also, have proven well suited to the employment of the majority of the workers in Mahaska County, who have developed no particular occupational skill in their typical employment as farm hands or as common laborers.

TABLE 18. EXPENDITURES OF FEDERAL AND SPONSORS' FUNDS ON WPA-OPERATED CONSTRUCTION PROJECTS, BY TYPES OF PROJECTS

| MAHASKA COUNTY, IOWA                                  |             |                                         |         |
|-------------------------------------------------------|-------------|-----------------------------------------|---------|
| CUMULATIVE THROUGH MARCH 31, 1939                     |             |                                         |         |
| Type of Project                                       | Amount      | Type of Project                         | Amount  |
| Total                                                 | \$1,150,434 | Public buildings                        | Cont.   |
| Farm-to-market and other secondary roads <sup>A</sup> | 783,435     | Road equipment building                 | 14,418  |
| Public buildings                                      | 159,239     | Bathhouse and swimming pool             | 52,243  |
| Improvement of public buildings                       | 71,071      | Parks and other recreational facilities | 131,701 |
| Gymnasium-auditorium                                  | 21,507      | Conservation                            | 1,280   |
|                                                       |             | Sewer systems                           | 54,162  |
|                                                       |             | Sanitation and health                   | 20,617  |

<sup>A</sup> Includes an \$804 street repair project.

The project activities described above cost slightly more than \$1,200,000 from the initiation of WPA operations in 1935 through March 31, 1939. The total includes the expenditures on construction projects as shown in Table 18 and the \$69,000 spent in the operation of the county sewing room. It does not include expenditures for a few state-wide white collar projects that were conducted in Mahaska County on a small scale. More than four-fifths of the total of approximately \$870,000 expended from Federal funds was for the payment of wages. Of the \$350,000 supplied by state, county, and town agencies sponsoring projects, more than two-thirds represented outlays for materials, supplies, equipment, rents, and other nonlabor items.

## ESCAMBIA COUNTY, ALABAMA

Escambia County is located in the southwest part of Alabama, next to Florida's northern border. It is essentially a rural county whose character is indicated by the fact that only 8,000 of its 28,000 inhabitants reside in incorporated places and that its two largest towns, Atmore and Brewton, have only 3,000 inhabitants each. About one-half of the 10,000 gainful workers in Escambia are engaged in agricultural activities; these workers cultivate only one-fifth of the area of the county. The remainder supports a fairly heavy growth of long- and short-leaf pine, accounting for the inclusion of Escambia among the 16 counties in the southern part of the state frequently referred to as the "piney woods section." Cypress may be found in the lowlands and in the Escambia and Conecuh River swamp areas. Much of the oak that grows in the county is of a noncommercial variety commonly known as "black jack;" some, however, is suitable for milling purposes.

Farm land in the western half of the county compares favorably with the best cultivated land in Alabama and the north central area has fair farming soil. Farms are generally small, producing such leading crops as sugar cane, corn, millet, potatoes, peas, strawberries, and peaches. Cotton is also grown, but not to the extent that it is in other parts of the state. Peanuts have become an increasingly important crop in recent years. Livestock production is limited to small numbers of cattle and hogs. As of January 1, 1935, there were 2,623 farms in the county.

Four lumber companies are located in Escambia County. The largest of these is at Brewton and employs 300 men in its creosote plant, box factory, and planing and veneer mills; another company, at Atmore, employs approximately 200 persons. Six other sawmills and nine turpentine distilleries also process forest products. Other establishments include three silk mills, two brick plants, an iron works, a vault company, two ice plants, a milling and elevator company, and a fertilizer plant. Twenty-two manufacturing firms, employing 1,484 workers, were in operation in 1935.

Some indication of the number and types of workers in the county who have been unemployed and in need of public assistance is found in the count of persons certified as in need of relief on January 15, 1936, and in the census of unemployment of November 1937. According to the former, a total of 1,585 employable persons needed relief; unskilled laborers accounted for nearly a third and farm laborers about a fourth of those who had work experience. In the 1937 unemployment census 2,578 persons (including 639 WPA and other emergency workers) registered as totally unemployed, and 1,537 persons registered as partially unemployed. Like the inventory of employable persons in need of relief the census of unemployment reported relatively large proportions of unskilled workers and farm laborers. Of the totally unemployed 950, or 37 percent, were Negroes as were 774 of the partially unemployed.

During the two years following the initiation of the WPA program in August 1935 the number of workers provided with project jobs in Escambia County fluctuated between 300 and 600. Curtailment of activities in the summer of 1937 brought the number of WPA employees below 200. However, with the expansion of the WPA program to provide work for farmers in need of employment to supplement their farm income, project employment in the county increased rapidly in the summer and fall of 1938 to a peak of approximately 950 workers. At the end of March 1939, 696 persons were engaged in project activities. It is estimated that more than three times this number of workers have had WPA employment at some time during the period of WPA operations.

### Construction

The WPA program in Escambia County, like the programs conducted in other communities, has been determined in part by the work proposed by local public agencies and in part by the skills and abilities of the needy unemployed workers in the county. Local demands for

better secondary roads, additional school buildings, and improved public health were relatively great, and manual laborers, principally unskilled workers and farm laborers, were numerous among the employable persons on relief rolls. Consequently, construction activities involving roads, buildings, and sanitation and health measures have predominated among WPA operations in Escambia County.

### Schools and Other Public Buildings

The improvement of school facilities, although it has represented only a small share of the entire WPA program in Escambia County, has been one of the most significant phases of WPA project operations in the county. On one project a new vocational school was erected at Flomaton. As a result of this project and others through which additions were made to four schoolhouses, the normal capacity of the schools in Escambia County has been increased by 850 pupils and crowded conditions in several buildings have been eliminated.

The Flomaton vocational school is a five-room, one-story, brick structure containing a food laboratory, a sewing room, a model living room, a carpentry shop, and a general classroom. Near the school building WPA workers erected a blacksmith shop in which students learn welding and other metal work. Grounds were improved by grass sprigging and planting

of shrubs and two acres of adjoining land were developed for demonstration and experimental purposes.

The new school at Flomaton fills a very real need. Not only has it eliminated overcrowding, but it has also made possible the expansion of the high-school curriculum to include courses of particular interest and benefit to rural students. Previously the high school did not have equipment to carry on vocational work and could not obtain state funds for vocational education until suitable facilities were available. As a direct result of the erection of the building state funds were granted to the school, and vocational teachers are now employed to conduct classes in agriculture, horticulture, animal husbandry, homemaking, cooking, and sewing. The school building serves as a center for club work and recreational activities of rural students and is also used by farmers and their wives who attend vocational classes.

Other WPA work on school buildings in Escambia County includes a two-room addition to the elementary school at Flomaton, an addition to the school at East Brewton providing a library, study hall, and two classrooms, and four-room brick additions to schools at Damascus and Wallace. The new section of the elementary-school building at Flomaton increases accommodations by about a third, making the building sufficiently large to house all the grade-school enrollees (about 400).

THE ADDITION TO THE HIGH SCHOOL IN EAST BREWTON PROVIDES LIBRARY, CONFERENCE, AND CLASS ROOMS

Provision of additional classroom space at Damascus and at Wallace has led to larger teaching staffs with the result that these towns are now on the state's accredited list.

An annex to the courthouse and a new city hall were constructed in Brewton in addition to the WPA work on educational buildings in that town. Various county offices—health, welfare, education, sanitation, and agriculture—which were formerly located in several different buildings are now effectively concentrated in the courthouse annex. One of the 15 rooms in the new annex can be converted into a small auditorium for meetings and demonstrations conducted by various county organizations. Clinic space for the department of public health is conveniently arranged, well-lighted, and adequately equipped, and examination and treatment are given much more effectively and rapidly than was possible in the former location.

Brewton's new city hall, costing about \$31,000, has permitted the removal of the town's offices from old quarters ill-suited to the purpose. In addition to offices for the city council, mayor, and clerk, the new municipal building provides room for a jail and for the city's fire-fighting and street equipment. The basement has adequate space for storage and for a community auditorium or additional offices.

### Airpark and Recreational Facilities

A mile and a half from Brewton an "airpark" project has resulted in the development of an airport in connection with recreational grounds. Such a project development may be approved when sufficiently justified by unusual circumstances. The park at Brewton lies between Montgomery and Mobile and serves as a refueling ground for light planes.

Brewton's airpark is on the site of an old landing field. Landing strips, totaling 5,000 feet in length, have been widened, a combination hangar and clubhouse has been erected, and a nine-hole golf course has been built on a 90-acre plot. The total cost of the airpark amounted to \$23,000 of which the state commission and the city of Brewton, as sponsors, contributed \$6,000. The aircraft hangar, made of brick with steel trusses, is large enough for

CARPENTRY SHOP IN THE WPA-BUILT FLOMATON VOCATIONAL SCHOOL

four planes, and the adjoining clubhouse of two stories has about 4,500 square feet of floor space. On the first floor of the clubhouse, which is used extensively by the citizens of Brewton as a community building, there are a general recreation and reading room, a ladies' lounge, a kitchen, and locker rooms. The second floor has one large room suitable for varied entertainment. Pine paneling and appropriate fixtures and furnishings contribute to the attractiveness of the clubhouse.

Athletic fields on the high-school grounds at Atmore and Flomaton have been built through the operation of WPA projects sponsored by the county board of education. From five acres of ground partially covered with stumps, trees, and brush, and cut by numerous small gullies, the Flomaton athletic field was developed. The

WPA WORKERS BUILDING BREWTON'S NEW CITY HALL

work performed on the project included clearing, grading, draining, and sodding of the land. NYA project workers constructed a grandstand and fenced the entire area. At Atmore, in addition to the leveling, draining, sodding, and fencing required on the three-acre athletic field, the work involved the erection, on either side of the field, of grandstands which have a total seating capacity of 900. A small brick building with two dressing rooms for players was also built. Installation of a lighting system by the town of Atmore makes it possible to use the field at night. General community activities as well as athletic contests and gymnasium classes are held on both the Atmore and Flomaton fields.

### Extension of Water and Sewer Mains

Prior to 1935 certain parts of Brewton were not reached by the town's water distribution system. This condition occasioned the initiation of a WPA project through which about five miles of water mains were laid. The extension of the water system not only provided facilities for additional consumers, but also made possible the placement of 16 fire hydrants so that fire protection has been extended to all property within the corporate limits of Brewton. Recent installation of 1,700 feet of sewer lines has permitted Brewton's disposal system to serve an additional 50 homes.

### Sanitation and Public Health

A state-wide campaign in Alabama has been directed towards the installation of sanitary privies at homes not reached by sewer lines. The primary purpose of this program is to combat hookworm, transmitted from infected soil through bare feet to the human system. The Alabama State Board of Health reported that for seven counties, including Escambia, the incidence of hookworm among school children in 1929 was 60 percent or more. By early 1939, however, the rate of incidence in Escambia County had been reduced from 61 percent to 39 percent, according to a survey conducted by the Escambia County Health Department. The WPA has contributed materially to this decline through the construction of 672 sanitary

privies conforming to the specifications of the state board of health. Upon approval by the proper health authorities, sanitary privies can be placed on the property of any person who provides the necessary materials.

Other major health measures in Escambia County include the elimination of conditions causing malaria and typhus fever. Since the climate and topography of the county provide a favorable environment for the malaria-bearing mosquito, the WPA has conducted projects furthering state and county efforts to eliminate mosquitoes by draining infested ponds and swamps. This work has proved very effective in reducing malaria in the areas that have been covered. Where feasible, ditches have been permanently lined with concrete or riprap. Some 74,000 feet of new ditches have been constructed and the 37,000 feet of old ditches have been improved. The practice of sodding unlined ditches with a layer of Bermuda grass, giving them some permanency at a much smaller expense than riprapping involves, has been followed since 1938.

### Highways, Roads, and Streets

From the standpoint of funds expended and employment created, the most important type of WPA activity in Escambia County has been the work done in connection with the development of highways, roads, and streets. Nearly \$470,000 of the \$663,000 expended on all WPA construction projects from the initiation of the program in August 1935 through March 1939

TABLE 19.—EXPENDITURES OF FEDERAL AND SPONSORS' FUNDS ON WPA-OPERATED CONSTRUCTION PROJECTS, BY TYPES OF PROJECTS

| ESCAMBIA COUNTY, ALABAMA                            |           |                                                                  |          |

was spent for road building and improvement. During that period WPA workers built or improved 910 miles of secondary road; they also laid bituminous surfacing on one and a half miles of state highway and built the base preparatory to surfacing an additional three miles. Almost four miles of streets were paved through WPA project work, and approximately four miles of sidewalks laid. In connection with the road and street work in the county 658 bridges (mostly wooden) were built, 607 culverts installed, and extensive drainage and shoulder work completed.

Because of the marked inadequacy of the county roads in meeting the needs of the rural population, the WPA has concentrated its activities in Escambia County on this secondary road work. Without any planned pattern, the county roads had developed over a period of years from the crude wagon roads that had been used when timber was cut and land cleared for farms. The roads were often crooked and indirect, avoiding gullies and swamps and crossing hills where elevations were lowest and creeks where fording was shallowest and safest. Streams that could not be forded were spanned by wooden bridges which were not treated to prevent rot or built to withstand high water. Even where roads had been improved somewhat the heavy rainfall on easily eroded soil still clogged drainage ditches and caused washouts on road surfaces.

Through WPA road projects many of the county roads have been straightened, widened, graded, graveled, and provided with better drainage. Considerable grubbing and clearing was required in widening the surfaces. The heavy rainfall of the region necessitated the construction of large culverts. Rainfall also was a factor influencing the construction of bridges since the creosoted timber bridges that have been built by the WPA have been made to withstand the high water of flood seasons. Bridges of this kind eliminate the inconvenience and hazards of fords and the costly upkeep of the old type wooden bridge.

When the WPA program was initiated, several of the streets in Brewton and East Brewton were unpaved and none of the streets inside the corporate limits of Flomaton were hard-surfaced. In Atmore, where only a few of the

most important streets had concrete sidewalks, the citizens petitioned the mayor to sponsor a sidewalk project so that, among other things, they might have city mail delivery. Through work on various road and street projects the WPA had paved 19,536 linear feet of city streets and laid approximately four miles of sidewalks in Escambia County by the end of March 1939.

## Professional and Service Work

Although most of the nonconstruction projects in Escambia County have operated in Atmore and Brewton, their benefits have extended to persons throughout the county. Only the recreation and adult education projects may be said to be less than county-wide in scope. At the end of March 1939, practically all workers engaged on those projects were women.

## Sewing Rooms

In order to supply garments for needy families in Escambia County two WPA sewing rooms have been operated. The sewing room projects, one in Brewton and the other in Atmore, have provided a large share of the jobs for women WPA workers in the county; approximately 50 women were at work on sewing projects during the spring months of 1939. Total expenditures on the projects through March 1939 amounted to \$69,400.

The products of the sewing rooms that were made prior to April 1939 included 16,700 garments for children, 13,675 for women, 6,850

for men, and more than 5,000 each of infants' wear and articles other than clothing. Approximately 106,000 yards of cloth were used in making these products, which have been distributed by the welfare worker to families unable to purchase sufficient clothing. The welfare worker constantly advises the project supervisor of the ages, sizes, and clothing requirements of members of the needy families and, where convenient, the prospective recipients may be called to the sewing room for measurements and fittings.

## Housekeeping Aide and Nursing Projects

WPA housekeeping aide projects are similar to sewing room projects in that women are assigned to the work and all persons benefiting from the project work are persons in need of relief. Workers on this project are trained and assigned to perform a variety of household duties for needy families in which illness or other conditions have made the usual homemaker temporarily unable to perform the normal household tasks. To qualify for assignment to this WPA project a woman must have had homemaking experience and must pass the physical examination given by the county health officer. Each worker is given a two-week training course which is supplemented one day each week by additional demonstrations and instruction. Subjects in which the workers receive training include home budgeting, diet, food values, care of the sick, prenatal and postnatal care, and general housekeeping duties.

Families needing housekeeping aid come to the attention of the county department of public welfare through its contact with recipients of public assistance. The welfare department cooperates with the project supervisor in outlining household problems and indicating the duties to be performed in the home. An aide may be assigned for a maximum period of one month; if after that time further assistance is necessary a new worker may be assigned. Although at the end of March 1939 the project had been operating only six months, approximately 1,000 visits had been made by the aides to 130 families. An average of about 20 women have been engaged in this work.

| Distribution of surplus commodities                | 3     | 2   | 1     |  |

The WPA service projects undertaken in the county also included a project to give nursing aid in connection with immunizations against contagious diseases. During the 15 months that the project was operated 1,017 immunizations were given.

### Education and Recreation Programs

The difficulties encountered in attending school because of the demands of farm duties and, until recent years, the inaccessibility of schools have hampered many rural residents in availing themselves of educational opportunities. WPA classes in adult education consequently have filled a very definite need in Escambia County. (Adult emergency education was transferred from the FERA to the WPA in 1935.) A WPA project was initiated in Escambia County in December 1935 and subsequently between 139 and 347 men and women have been enrolled in courses of this kind.

Classes have been devoted to literacy, vocational education, and general adult education. The extent of the program and its scope have varied directly with the number and qualifications of the available teachers on the relief rolls. In March 1939 there were seven WPA employees teaching citizenship to 79 persons, vocational subjects to 62, and general education subjects to 121. Any person in the county is eligible to attend these education classes, which are usually held once a week in private homes.

WPA recreation activities have been conducted intermittently in Brewton, Atmore, and the community of Canoe. Workers numbering up to 20 have provided leadership in social recreation, music, crafts, softball, tennis, and basketball for a number of participants ranging from 500 to nearly 3,000 per month. For recreation areas, public school grounds have generally been used.

### Book and Desk Renovation

In June 1937, the WPA initiated in Escambia County a unit of the state-wide project for renovation of library and school books and school desks under the sponsorship of the state

department of education and the cosponsorship of the county board of education. A succeeding project continues the bookmending activities of this project. By the end of March 1939, 13,246 books and 5,715 desks and other pieces of school furniture had been reconditioned.

Books for mending have been brought from the schools throughout the county to the project headquarters at Brewton in accordance with a schedule prepared by the county board of education. This insures uninterrupted work, with a minimum of books out of use. Each project employee is responsible for specific phases of the repair work. A book needing complete renovation is first thoroughly cleaned and its torn pages mended with transparent tape. If the binding is broken, a piece of material is stitched along the back to hold the pages secure. Some of the books are recovered with cloth binding which is then lettered. After the final process of shellacking the cover, a book is in good usable condition.

DRAINAGE DITCH FOR MALARIA CONTROL

In Escambia, as in other counties in Alabama, free text books are furnished to the children in the first three grades of the public schools. Because in recent years it has been necessary to provide books for an increasing number of students, the book-repair work has been of particular importance. The work also has proven well suited to the employment of women. On March 22, 1939, a total of 57

women, 53 of whom were unskilled workers, were engaged in activities on the book-repair project.

---

The new and improved facilities and the services provided through the operation of WPA projects in Escambia County are enjoyed by the county's entire population. Although the extension of water and sewer lines and the education and recreation programs have been concentrated in the larger towns the improvement of roads has been general throughout the county and other phases of the WPA program have operated for the benefit of persons living in both urban and rural areas. For the rural residents the road work has meant greater accessibility of markets, shopping centers, and schools; more regular mail delivery; more adequate medical care at lower rates; and wider opportunities for recreation. Persons residing

in towns have also benefited from the road improvements through the resulting stimulation to trade; newly paved streets have eliminated much of the inconvenience caused by mud and dust; and adequate culverts for the removal of storm waters have reduced the losses arising from flooded streets and basements.

In making the many contributions to the social and economic welfare of the county the WPA has accomplished its complementary objective of providing employment opportunities to needy unemployed persons. The prosecution of the project work has supplied jobs not only to many of the county's unemployed workers but also to low-income farmers. During the period of nearly three and three-quarters years from the beginning of operations in 1935 to the end of March 1939, more than 2,000 different persons, almost all of them with families, have found a temporary livelihood in their employment on WPA projects.

## PORTSMOUTH, OHIO

Located in the south central part of Ohio at the junction of the Ohio and Scioto Rivers, Portsmouth is protected on the south and west by floodwalls. Behind these flood defenses are carried on the commerce and productive activity of a medium-sized urban center that participates in the manufacture and agriculture of the Middle West. Portsmouth serves as the trading and shipping center of the surrounding area and obtains its industrial life from the steel, shoe, railroad, and smaller diversified establishments that are located within the city and its environs.

The land on which Portsmouth stands was laid out in lots by Major Henry Massie, a Virginian who came to the Northwest Territory in 1797. Portsmouth was incorporated as a town in 1814 and six years later had 500 inhabitants. The present city accounts for half the residents of Scioto County, of which Portsmouth is the county seat. Not included in its 1930 population of 42,560 persons are the residents of New Boston (a municipality of 6,000 inhabitants that lies within Portsmouth),

the residential district across the Scioto River, and other suburban areas that are part of "Greater Portsmouth."

During the years following the introduction of the steamboat and the completion in 1832 of the Ohio Canal (extending from Cleveland to Portsmouth), Portsmouth played an active role in handling the river and canal traffic. The shipment of local products and transshipment of produce brought to Portsmouth made the city an important link in the Ohio and Mississippi waterway traffic of central Ohio during the pre-railroad era.

Portsmouth's first railroad, which later became part of the Baltimore and Ohio system, connected the city with lines running through Hamden, Ohio, soon after 1850. At the present time the city is served by the Norfolk and Western, the Chesapeake and Ohio, and the Baltimore and Ohio railroads. Most important of these to Portsmouth is the Norfolk and Western road whose main line runs from Norfolk, Virginia, to its Portsmouth junction from which lines turn north to Columbus and west

to Cincinnati. The repair shops and freight yards of this road, which obtains much of its traffic from the West Virginia coalfields, supply Portsmouth with one of its major industries.

Since its early days Portsmouth has been a manufacturing town, the result of its advantageous location on the Ohio River and its easy access to the natural resources of the surrounding area. Among the resources that have played a significant role in the development of the city are coal, iron ore, limestone, sandstone, fire clay, and timber. In the early days much of the locally produced pig iron was shipped without manufacture; this was particularly true of the period before the building of an iron bar and nail mill. Portsmouth's first steel plant was constructed in 1872 and since that time iron and steel production has predominated among the industries of the community. In 1916 a steel plant was built in New Boston, which has employed a majority of the area's factory workers during the recent decades. The shoe industry of Portsmouth has likewise been important to the community. Manufacture of shoes was begun in the city as early as 1869 and is now carried on by three firms which sell a variety of shoes in the national market. Other local industries produce paving and wall brick; shoe lasts, heels, and laces; paper boxes; stoves; cement; and stone products.

The extent of unemployment that has prevailed in Portsmouth during recent years must

be explained in terms of the industrial life of the area in which the city is located. Curtailed manufacturing activities, particularly in the steel and brick industries, have caused a relatively high degree of unemployment in the city. At the time of the national unemployment census of November 1937, 3,835 persons (including 759 emergency workers) registered as unemployed. A large proportion of these persons had been skilled and semiskilled workers; many had been common laborers, clerks, or domestic servants, and a few had been proprietors or managers of businesses.

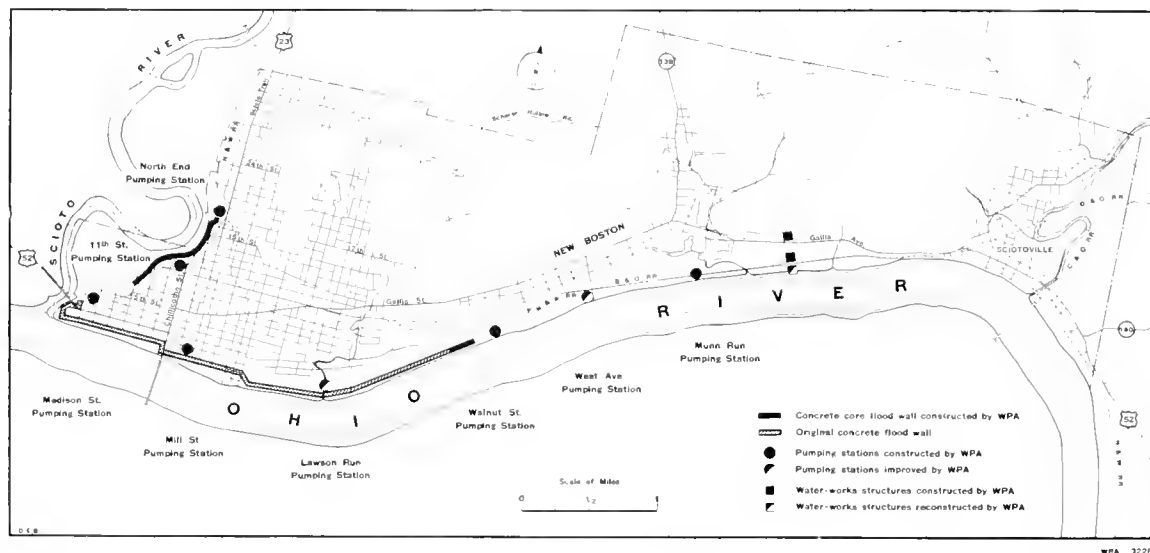

The project activities of the WPA in Portsmouth are distinctive of the city in that the work provided for the unemployed has given special stress to flood defense work and to the repair of damage after the floods of 1936 and 1937. The need for such projects was only too evident. The account of WPA undertakings that follows is not, however, limited to flood defense and rehabilitation activities since in the operation of WPA projects from 1935 to 1939 a varied program of work has been conducted. Through this program Portsmouth now enjoys the advantages of more adequate flood defenses, improved roads and streets, renovated public buildings, extended sewer and water systems, and better park and recreational facilities. The accomplishments on white collar, goods, and other nonconstruction projects supply additional benefits to the community.

THE 1937 FLOOD  
IN PORTSMOUTH

## WPA FLOOD DEFENSE WORK IN PORTSMOUTH, OHIO

Through March 31, 1939

### Flood Control and Sanitation

Projects designed for defense against floods, for the rehabilitation of flood-damaged facilities and property, and for the assistance of flood-stricken families have been outstanding among WPA operations in Portsmouth because the location of the city at the junction of the Ohio and Scioto Rivers makes it particularly susceptible to floods. The site on which the city has developed resembles a basin that is exposed on the south to the Ohio River and on the west to the Scioto River; this may be seen in the accompanying map. The ground slopes up from the rivers to form a sort of table land on which most of the city is built. Hills rise steeply and irregularly from the table land on the north and east sides of the city.

Prior to the construction of flood defenses Portsmouth was subjected to floods in two out of every three years. The southwestern part of the city in which most of the business section is located lies at an elevation of from 520 to 536 feet. Since the low-water river elevation is 470 feet, a 50-foot rise in the water level brings water to the edge of the city on both the Ohio and Scioto sides. At the 55-foot stage

approximately one-third, and at the 65-foot stage over two-thirds, of the city is below the water level.

Because experience had shown that the rivers seldom rose more than 62 feet from the low-water mark the earlier flood defenses of Portsmouth provided protection up to that height. This protection was supplied by a concrete wall along the Ohio River, about 3 miles long, and railroad embankments which served as levees eastward from the wall along the Ohio River and northward along the Scioto River. The first section of the concrete wall was constructed in 1908 and eastward additions were built in 1916 and 1929. As a further protective measure five pumping stations were erected to expel sewage when the water rose to a height that prevented the normal flow of sewage into the river.

The city experienced no major calamity until 1937 although floods frequently brought the crests of water near to the top of the flood wall. In 1933 and again in 1936, when other cities along the Ohio River were inundated, Portsmouth was only slightly damaged. However, the levee on the Scioto River side, part of it a large cinder and furnace slag fill, allowed

excessive seepage during high water and frequently had to be bolstered with sand bags when the river rose to flood stage. Furthermore, the sewage pumping equipment, which had to be operated 24 hours a day when the river reached the 60-foot level, was obsolete and almost worn out.

The 1937 flood proved to be one of the worst in the city's history. At its greatest height the rising water was 12 feet above the top of the 62-foot flood wall. A major part of the city was covered and the flood wall and levees were damaged. The high- and low-duty water pumping stations were disabled and drinking water from a storage reservoir had to be rationed by drawing from the reservoir for only a few minutes each day.

### **WPA Flood Defense Work**

After the 1936 flood, the city began to reconstruct and extend its flood defenses—work that was conducted more intensively subsequent to the disastrous 1937 experience. Through the operation of WPA projects, the flood wall was rebuilt and extended, the levees strengthened with concrete core walls, the water system protected against flood disablement, and the sewage pumping system reconstructed to assure adequate expulsion of sewage during flood periods.

In the 1937 flood a large section of the levee along the Ohio River at the eastern end of the flood wall was washed away. The levee was an earthfill embankment that in earlier years had been subject to excessive leakage and consequent failure at high water. The workers employed on flood defense projects extended the concrete wall a distance of 80 feet to replace the demolished part of the levee and made the adjoining section of levee, about 1,000 feet in length, impervious to leakage by the construction of a concrete core wall.

The necessity of deep excavation into the levee in building the core wall was eliminated by driving the reinforced concrete piles (about 500 in number) through the earth fill into five feet of solid ground. Project workers prefabricated the piles, each 24 feet long, with interlocking joints so as to form an unbroken structure over the entire length. A concrete wall was built over the core, preventing erosion at

the top of the levee and raising by several feet the level at which protection is afforded.

On the Scioto River side, the cinder and slag embankment is subject to particular exposure because of its proximity to the junction of the two rivers. The porousness of the material of which the fill is composed allowed seepage during high-water periods, far beyond the capacity of the city pumping equipment. In order to reduce such leakage concrete piles similar to those employed in strengthening the Ohio River embankment were used. As many as 700 prefabricated concrete piles were driven into the levee in making a core wall that is approximately 1,000 feet long. The piles vary from 8 to 38 feet in length depending on the depth of the fill. During the 1939 flood stage no appreciable leakage was observed through this section of the levee. The city was further protected from flood waters on the Scioto River side by the construction along the embankment of a concrete wall about 4 feet in height and extending upstream approximately 4,500 feet from the north end of the core wall. This structure raises the maximum level at which protection is provided and prevents the erosion that was formerly caused by the overflow of the river.

The accumulation of sewage during the 1937 and earlier floods far exceeded the capacity of the city's obsolete pumping equipment. Seepage through the levees, run-off of rain water from the surrounding highlands, and normal sewage collected so rapidly that, even with the aid of fire department and railroad pumping apparatus, the city equipment was incapable of removing the accumulation. Projects begun in August 1937 resulted in the construction of five new sewage pumping stations on trunk sewer lines, the renovation of two old stations, and demolition of the other three. New electrically driven pumps, with a total pumping capacity of 106,000 gallons per minute, were installed and all necessary connections were made. The stations are constructed of brick on concrete foundations with the exception of the Washington Street Station which is made of concrete. One new station was also built and one repaired in New Boston.

Unlike the old steam-driven pumps, that had been placed directly in the sewer lines and were

HIGH-DUTY PUMPING STATION, BUILT TO FUNCTION AT FLOOD LEVELS MUCH HIGHER THAN THOSE REACHED IN 1937

operated 24 hours a day during flood periods, the new pumps operate discontinuously for periods of 15 or 20 minutes at a time. This is made possible by the underground concrete reservoirs that were constructed at four of the new stations to hold sewage when the regular outlets are closed. The pumps start operating automatically when the reservoirs are filled to a specified point, expelling the sewage into the river through a by-pass outlet under the surface of the water. The reservoirs have a storage capacity of about 690,000 gallons and the new pumps are capable of emptying them in less than seven minutes.

WPA projects undertaken in connection with a third phase of the flood defense program are designed to protect the city's water supply up to a flood level of 90 feet. A new concrete storage reservoir, watertight to the 90-foot level,

now replaces the old high-duty station. Water can be pumped from the filter tanks to the reservoir, from which it is forced by gravity into the city mains. A section was added to the low-duty station located on the bank of the Ohio River so that it could operate at a flood stage of 90 feet—a level 16 feet higher than the 1937 flood and 10 feet higher than the possible maximum flood as estimated by army engineers.

From August 1936 to August 1938 an average of 400 WPA workers were employed on the flood defense projects exclusive of the waterworks job. Peak employment of 600 men was reached just prior to the flood in January 1937. The total cost of the work, including Portsmouth's sewage-pumping stations but excluding the waterworks, was \$464,000. (Table 21.)

The first test of the flood defense facilities came in February 1939. An inspection by city officials at the time when the water reached the 52-foot stage showed that there was no seepage in the levees where the concrete piling had been driven; the pumping stations were disposing of the sewage as fast as it accumulated in the storage reservoirs; and the repaired wall was holding up in a satisfactory manner. At the same flood stage in earlier years, a large city force would have been laboring night and day protecting the levees, trying to prevent seepage through the earth embankments, and building ramps to higher levels with sand bags and timber. Another crew would have been on duty 24 hours a day to keep the steam-driven sewage pumps in operation. Despite this labor, costing the city from \$20,000 to \$25,000, some water would have entered and fear of graver trouble would have developed. In 1939 the city was dry and business continued without interruptions.

## Emergency Flood Work

When Portsmouth was flooded in 1936 and again in 1937, almost the entire force of WPA workers assisted in carrying out the emergency protection measures that were necessary at the time and later helped in rehabilitating the damaged public facilities. In 1936, approximately 1,500 persons were employed for ten days; and in 1937, when flood waters rose 12 feet higher

<sup>A</sup> Data relate only to those projects that were operated in Portsmouth proper.

<sup>B</sup> Including construction of sidewalks and erection of street signs.

<sup>C</sup> Includes expenditures of \$11,700 for emergency restoration of school buildings after the 1937 flood.

<sup>D</sup> Estimated.

than the defense wall, about 2,000 WPA workers were engaged in emergency work for two and a half weeks.

WPA employees gave assistance during the emergencies in evacuating families from their homes and moving them to higher ground, constructed temporary shelters for flood refugees, filled sandbags and piled them on weakening levees, bolstered fills at roadway openings and weak spots in the flood wall, protected unfinished WPA project work by fastening down lumber and other materials, built rescue boats, and constructed sanitary toilets for use when the sewer system ceased operating. Women employed on WPA projects assisted in feeding and caring for refugees who were housed temporarily in schools, churches, private homes, public buildings, and hastily-built shelters.

## Reconstruction after the 1937 Flood

When the 1937 flood waters receded, after having covered a major part of Portsmouth for about two weeks, mud and flood debris littered the city. Practically all WPA workers in the community were engaged in cleaning and restoring the city to a normal condition. One of the first tasks was to remove debris from the streets—a continuous process as long as homes and buildings were being cleaned out. Schools and other public buildings were cleaned, furniture put in place, and necessary repairs made so that normal functions could be resumed. WPA workers also repaired damaged streets, sidewalks, curbs, gutters, and sewer and water mains. Employment on rehabilitation projects, which totaled 2,500 persons when the work started in February and was gradually reduced until the work was completed in June, averaged about 1,000 workers over the five-month period.

## Other Construction

### Streets and Sidewalks

The recurrent flood damage suffered by Portsmouth has meant that a very considerable portion of the WPA projects in the city have been devoted to replacement or rehabilitation of the various kinds of public facilities. On the improvement of streets and related

work nearly one and a half million dollars of Federal and city funds had been spent by the end of March 1939. Some of the streets, the original surfacing of which was not designed for present-day traffic, were in a serious state of disrepair before they were further damaged by flood waters. Many of the street surfaces that were covered with brick laid on a sand base gave way when exposed to heavy traffic. In the outlying districts the roads were either gravel-coated or else quite unimproved with narrow bridges and inadequate drainage.

WPA workers have faced main thoroughfares and important secondary streets with concrete, paved other streets with reclaimed and salvaged materials, and constructed sidewalks, curbs, and gutters. The expense of storing and reloading salvaged brick, concrete, and stone taken from the main streets has frequently been saved by timing the minor street projects so that the salvaged material could be used directly on them. Such material provides a good bed for future hard-surfacing, and also made possible in Portsmouth the improvement of alleys—work which the city otherwise could not have financed.

Many examples of WPA street improvements might be cited. The Scioto Trail (the only northern outlet from the city) which runs through the business section was widened, surfaced with concrete, and equipped with new sidewalks, curbs, and gutters. On Fifth Street a section of rough brick surface was removed and a concrete surface laid. At the same time the street was widened and furnished with

BUILT AS A PART OF THE FLOOD DEFENSE PROGRAM, ROADS SUCH AS THIS WILL PROVIDE MEANS OF ESCAPE SHOULD THE MAIN ROADS BE FLOODED AGAIN.

curbs and gutters. A one-half mile concrete extension of 17th Street now enables workers employed at the river-front mills and shops to avoid the downtown business section in reaching their places of employment. Second Street (U. S. Highway 52, leading to Cincinnati) is being widened to 50 feet from the Scioto River to Chillicothe Street and paved with concrete. This work, when completed, will greatly ease the flow of the Portsmouth-Cincinnati traffic and provide more direct access by truck to the warehouses along the Ohio River.

One project in the residential section involved the improvement of a narrow but much-used street that was virtually impassable in wet weather. This street, which led to the high school, was widened and straightened, paved with concrete slabs, and supplied with curbs and drains. WPA workers converted Mabert Road, formerly an old stone and dirt street that became hazardous in rainy weather, into an all-weather highway by hard-surfacing it, laying gutters of salvaged brick, and building catch basins. Among other streets in the outlying sections, Scherer Hollow Road, Thomas Avenue, Milldale Road, and Daniels Drive were improved.

Altogether about 6½ miles of streets had been hard-surfaced and slightly more than 26 miles of pavement had been improved through the operation of WPA projects by the end of March 1939. In addition, slightly over 2 miles of park roads had been paved and 40 miles reconditioned. Related construction completed by the WPA in the city includes 24,200 feet of sidewalks, 59,500 feet of curbs, 83,000 feet of

gutters, 2,500 feet of concrete marking strips, and 30,000 new street signs.

## Public Buildings

Forced as were other cities to conserve funds during the depression, Portsmouth kept the construction and improvement of public buildings at a minimum from 1930 through 1935. When floods during 1936 and 1937 damaged many of the public buildings of the city it became imperative to undertake a large rehabilitation program at once. City applications for WPA projects involving the erection and renovation of public buildings were approved and a substantial amount of work of this type was initiated through the WPA program. By the end of March 1939, about \$570,000 in Federal and city funds had been expended on WPA public buildings projects. Among the major new buildings constructed in Portsmouth through WPA projects are a memorial hall, a garage for the city's street-maintenance equipment, a city waterworks service building, an addition to the high-school building at Sciotoville, and the stadium at Labold Field.

Because residents of Portsmouth had long been without an adequate hall for civic and recreational gatherings, the city in 1936 sponsored a project for a new municipal hall. The \$41,000 hall that has been constructed is a one-story building, having a large auditorium that is equipped with a stage and removable seats. In the basement are a game room, kitchen, storage rooms, and a heating plant. Use of the building is in such demand that it is open daily with a full-time caretaker in charge.

A new brick and concrete building was constructed for storage of equipment and materials used by the city waterworks department. Cost was kept low through extensive use of salvaged materials. The brick and structural steel used in the structure were salvaged from the demolished city waterworks plant. Lumber and millwork were similarly obtained. New materials were limited for the most part to cement and sand needed for the concrete floor, electrical fixtures, and window glass.

On the Sciotoville high-school grounds WPA workers demolished an old school building, which had been used to relieve overcrowding

MUNICIPAL GARAGE FOR STREET EQUIPMENT

even though it had been condemned as unsafe by the state department of education. In place of erecting another structure apart from the main high-school building, a two-story addition containing eight rooms was built on to the main building. The new section will accommodate 150 pupils. The workers on the project also installed the plumbing, heating, and electrical work.

Projects have also been operated for the renovation of many of the public buildings in the city. Such work, including both general improvements and repair of damage caused by floods, has been done on the schools, the fire stations, the armory, the municipal hospital, the memorial hall, the court house, the public library, and other public buildings located in the city.

Early in the WPA program it was planned to renovate each of the city's 19 school buildings. This work was well under way when the 1937 flood caused heavy damage to nine of the schools. Water filled the basements and rose from 1 to 11 feet above the ground floors. An emergency project was immediately approved for the rehabilitation of heating systems, plumbing fixtures, electric wiring, brick work, floors, blackboards, windows, steps and walks, and playgrounds. After this job was completed, the prior improvement program was continued. WPA workers removed old plumbing and heating equipment and installed new plumbing fixtures and heating systems. They built cabinets and shelves in home economics rooms, cut new doors and windows, and laid tile floors. Window sashes and panes were refitted and reset. Old brick driveways and worn stone sidewalks and concrete steps were torn out and replaced with new materials.

Portsmouth's four fire stations had been built to house the old type horse-drawn fire equipment. The stations were heated by gas or coal stoves, interiors were unfinished, drying towers for hose and equipment for repair work were lacking, and second floors were little better than lofts. Through WPA project work the city now has four modern fire stations adequate for its needs. Repair shops have been installed, towers provided for the drying of hose, additional rooms have been built, and steam heat installed.

A much needed renovation job was performed at the municipal hospital, which is large enough to serve 175 in-patients. WPA operations included overhauling the plumbing and heating systems, rebuilding the walls and roof, and repainting the woodwork.

### **Water and Sewer Systems and Other Utilities**

WPA public utility projects in Portsmouth have not been limited to the sewer and water system undertakings described in connection with the city's flood defense program. Through WPA project operations a number of water mains have been extended to provide a sufficient supply of water in underserved areas and to reach the newer outlying sections of the city. Some 12,000 feet of pipe have been installed, new consumer connections made, fire hydrants reconditioned, and drinking fountains put in. This has improved service and afforded greater fire protection in both the business and residential sections of the city. Other project operations involved the installation of water meters in Portsmouth and New Boston. The meters were placed in frostproof, noncorroding, concrete boxes along the curbs, with copper wire connections to prevent rusting. Since the installation of the new boxes there has been no instance of meters freezing a difficulty that previously had cost the city approximately \$3,000 a year.

Sewer construction work on WPA projects has been directed towards remedying a situation resulting from the lack of planning in location of the older sewers and from the deteriorated condition of many of the old lines. Inadequate drainage after heavy rains was typical in some sections and in others open sewers constituted a health menace. Brick salvaged from repaired streets has been utilized extensively in the sewer construction work. Most of the sewers were built entirely of this material and the few concrete sewers that were laid have been lined with brick. In addition to the construction of 48,700 feet of sewer lines and improvement of 153,000 feet, 365 catch basins and manholes have been built or improved.

The largest single sewer job was that of

covering the Lawson Run open sewer and reclaiming the area through which it ran. This sewer formerly a 3,000-foot open ditch bordered by a dump ground was the source of a majority of the typhoid cases in the city. The open creek has been replaced by a covered sewer line over about two-thirds of its length, and the remainder to the point where it empties into the Ohio River has been riprapped with salvaged concrete to prevent erosion. The old dump, which comprised an area of approximately four acres, was graded after the sewer trench was backfilled and is to be converted into a park and playground. Installation of the sewer line made possible the extension of roads and sidewalks so that, upon completion of the project, trucks and other heavy vehicles will be able to pass through the city without entering the business section. This project has done much to revive the section of the city in which the improvements were made.

Rehabilitation of city police telephone lines was undertaken on a project started in November 1935. Upon completion of the work in March 1936, 210,000 feet of circuit had been renovated and 148 police call boxes painted. Work has also been done on switch boards in city buildings and wires for the police and fire alarm systems have been laid underground.

## Parks and Playgrounds

Labold Field in Portsmouth is one of the finest park developments in the state. It is the result of WPA operations which have transformed a little-used and inadequately equipped area of 25 acres into a well-equipped recreational park serving the entire city. WPA work at Labold Field included construction of a new stadium equipped with a football field, a running track, and facilities for field events; renovation of the baseball field; construction of 12 tennis courts; and development of a 15-acre play area.

The seating capacity of the stadium is sufficient for 7,500 spectators; stands are on both sides of the football field and high brick walls at each end. Dressing rooms for contestants are located beneath the stands and are equipped with lockers, showers, and other facilities. The grandstand at the baseball field was in a dilapidated state through years of neglect and the field and enclosure required considerable attention.

Project workers practically rebuilt the grandstand, provided dugouts for the players, and erected a nine-foot brick wall around the entire field. They also converted the area across the roadway from these structures into a large

THE WPA BUILT STADIUM AT LABOLD FIELD SEATS 7,500 PERSONS

playing field of approximately 15 acres containing three softball diamonds, croquet courts, and facilities for other outdoor games. The park grounds which surround the playing fields have been landscaped, shelter houses built, and drinking fountains, park benches, and electric lighting facilities for night games provided.

Other parks in the city have also been improved. This WPA work included the building of stone shelter houses, and the construction of sport facilities such as croquet, roque, and horseshoe-pitching courts, marble-playing fields, and softball diamonds. Benches, sidewalks, curbs, roadways, water mains, adequate drainage facilities, and drinking fountains were also installed in Portsmouth parks.

## Professional and Service Work

### White Collar Projects

White collar undertakings of the WPA in Portsmouth include not only those projects sponsored by city agencies but also certain county- and state-sponsored projects that are operated in the city principally with Portsmouth workers. WPA recreational leaders, with the cooperation of YMCA workers and members of churches, school boards, and various civic organizations, have conducted classes in handicraft, formed ball leagues, and supervised playgrounds in the city parks.

Teachers on the adult education program (usually numbering about 13) have made a determined effort to increase literacy in the county, where, according to the 1930 census, 1,838 persons were classified as illiterates. The fundamentals of reading and writing have been taught to more than 300 persons since March 1938 and more advanced classes have been conducted in subjects such as arithmetic, geography, history, government, bookkeeping, shorthand, and typing. An average of about 55 children have been enrolled in the two nursery schools for children of low-income families during the past school year.

Through housekeeping aide activities, project workers have gone into homes of more than 550 needy families in which the housewife was temporarily incapacitated, and have assisted with the regular housework and the care of children.

ROQUE COURTS ARE AVAILABLE IN MOUND PARK AS A RESULT OF WPA PROJECT OPERATIONS

The distribution of surplus commodities to families in need of relief has been facilitated by the use of WPA labor. Other WPA workers have cleaned and mended books in public and school libraries and renovated furnishings and interiors of various public buildings.

A varied program of survey projects to aid in municipal administration has been conducted in the city of Portsmouth and in Scioto County. An example of this type of project is the city-sponsored real property inventory taken during 1936. A total of 13,754 dwelling units, covering 11,685 separate structures, were enumerated. The 16 maps and graphs and the tabulations prepared from this enumeration are now being used in city planning.

In April 1937 a project was undertaken to complete, cross-index, and file various county records, including automobile bills of sale and cases of the criminal and district courts. On another project started in October 1938, all birth and death records of the county for the years 1856 to date are being checked and reindexed to facilitate work in connection with the administration of the Social Security Act. Card files of the records of births and deaths since 1908 are also being made for the city and county departments of health.

Workers on other projects are making, or bringing up to date, indexes for records of wills, marriages, adoptions, bills of sale, settlements, and official letters. A file of the 30,000 pupils in the Scioto County schools for the years 1929 through 1938 was compiled for the county superintendent of schools. The faded and torn handwritten deeds in the county recorder's

office were typed on looseleaf ledger sheets and were bound in permanent looseleaf binders.

Location of section corners, accomplished through an engineering survey, has provided the basis for public and private survey work in the county and can be used in the preparation of accurate tax and road maps. Under another project, maps and records have been prepared showing the location and condition of all roads and drainage structures in the county. These are of service to the county engineer in maintaining and renovating the road and drainage structures.

<sup>A</sup> Data for Portsmouth represent the estimated number of persons working in Portsmouth proper; they include some workers from New Boston and other parts of Scioto County, and exclude many Portsmouth workers employed on projects, particularly the county road undertakings, operated outside of the city limits. The number of workers employed in Portsmouth on certain county-wide projects has been estimated from county totals.

<sup>B</sup> Estimated.

## Sewing and Other Goods Projects

In Portsmouth, as in most cities, the majority of the women employed on WPA projects have been given work in sewing rooms. The women thus employed have not only produced thousands of garments for distribution to families in need of relief but have also made quantities of articles for use at the municipal hospital—sheets, pillow slips, hospital gowns, and furnishings, such as drapes and curtains.

Toys, furniture, and clothing donated through the Red Cross for flood victims have been reconditioned. Some of the garments required only cleaning and minor repairs; others provided material for made-over clothing. Left-over pieces of cloth have been woven into rugs or used in making comforters and quilts.

## Work in Suburban Areas

In the preceding description of the WPA projects the discussion has been limited to activities conducted within the city limits of Portsmouth. No attempt has been made to cover the project work undertaken in the separately incorporated town of New Boston—the two pumping stations constructed there are mentioned in connection with the Portsmouth flood defense program because the stations form part of the Portsmouth sewer system. The discussion of Portsmouth projects also excludes the work performed by residents of the city on projects operated outside the city limits.

IN PORTSMOUTH, AS ELSEWHERE, A LARGE SHARE OF THE WOMEN EMPLOYED BY THE WPA WORK IN SEWING ROOMS

Unemployed persons from Portsmouth have performed much of the work in connection with the installation of complete sewer and drainage facilities at the county fair grounds, at the community recreational center in Washington Township, and at the camp built for the use of youths in the Roosevelt Game Preserve seven miles from Portsmouth. At the camp they also participated in the erection of several log structures including a mess hall and central building, living quarters for the group leaders, bunk houses, and additions to the bathhouse. A WPA-built swimming pool and an outdoor amphitheatre add to the facilities provided at the camp in the Roosevelt Game Preserve.

Also illustrative of construction work outside of the city accomplished primarily by Portsmouth labor are the brick dormitory and the new poultry house at the County Infirmary, the silo and modern dairy barn at the County Poor Farm, and the two-story building for playroom and sunning purposes at the Children's Home. Portsmouth workers have, in addition, been employed in large numbers (approximately 1,000 in March 1939) on the county-wide road projects. Such projects include the flood escape roads which connect with main highways at various points in Scioto County after they cut across the hills that are located along the northern edge of the city limits.

## ERIE, PENNSYLVANIA

Erie, Pennsylvania, with an estimated population of 123,500 persons in 1938, has many of the characteristics of the large industrial cities of the country. Its location on the southern shore of Lake Erie, about halfway between Buffalo and Cleveland and almost due north of Pittsburgh, places it in the general section of the country in which large manufacturing cities have developed. Erie has a relatively diversified group of industrial establishments and enjoys facilities for both rail and water transportation. These are among the more significant factors which have tended to pattern Erie after much larger cities and to give a metropolitan characteristic to its problem of project work for the unemployed.

The heavy goods industries account for a large percentage of Erie's numerous manufacturing concerns. Among the more important durable products that are made in the community are electrical machinery and supplies, including locomotives and refrigerators; machine and hand tools; boilers; building hardware, plumbing supplies, and heating equipment; and steel forgings. The less durable manufactured articles that are significant in the industrial life of Erie include paper products of various types, washing machines and other household equipment, rubber goods, and certain textile products.

Trade in the city centers about the requirements of the community proper and the surrounding areas, which are primarily agricultural. Orchards, vineyards, and truck gardens are extensive along the lake; inland from the lake shore area dairying and general farming are the chief pursuits. Commercial lake fishing is carried on from the harbor.

Industries in the community must rely in large measure for their materials and markets on regions outside this limited trading area. Such traffic is adequately handled by the transportation facilities of Erie. The loading and unloading of coal and coke, grain, iron ore, pulpwood, and package freight—major items among shipments by boat—are expedited by grain elevators, freight warehouses, and special equipment for handling iron ore. Two railroad systems (New York Central and Pennsylvania) have division headquarters in Erie; the New York, Chicago, and St. Louis (Nickel Plate) and the Bessemer and Lake Erie Railroads also move traffic to and from the city. These roads provide a network of tracks on which iron ore and other goods can be shipped inland to consuming districts, and coal and other products can be brought to boats for re-shipment.

The growth of Erie has been the result in no small measure of its location on the bay formed by Presque Isle. This peninsula affords

a protected harbor for the lake boats plying to and from the city. Largely a state park that is noted for its attractiveness and recreational possibilities, the peninsula is joined to the mainland by a narrow neck of land at a point about a miles outside the western city limits. Erie proper is built on the lake shore plain on a tract between two and three miles in width and about 113 feet above the lake level. The peninsula protects the city from the storms and the lake affords relief from extremes of temperature.

WPA operations began in Erie in September 1935. Since that time practically all the kinds of work generally undertaken by the WPA have been prosecuted in the city and its immediate vicinity, furnishing employment for several thousand Erie workers. By the end of March 1939, approximately \$5,330,000 had been expended on projects in Erie and on Presque Isle. This total does not include funds used on state-wide white collar projects operated in Erie.

Of particular importance to Erie has been the storm sewer construction work which alone accounted for almost 30 percent of the total cost of construction projects (\$3,886,487). Street paving and resurfacing has done much to improve the city's thoroughfares and the development of Erie Airport, west of the city, has been significant in the WPA program of the community. The city has paid \$841,000 towards the cost of the projects it sponsored (as of March 31, 1939); the county supplied \$25,000 for projects operating in the city and for county-wide projects operated primarily in the city; and state agencies, such as the State Park and Harbor Commission, expended \$49,000 for work performed on state property in Erie and on Presque Isle, in addition to that expended on state-wide projects.

Closely related to the work done in Erie proper are the WPA activities in suburban areas, particularly in Mill Creek Township. The sewer and water mains laid in Mill Creek Township by WPA workers connect with the Erie systems and much of the street work constitutes an extension of the improvements made within the city limits. The Wesleyville sewing projects have provided garments and other articles for the needy families in Erie as well as in Wesleyville. Projects in the sub-

<sup>A</sup> Except where noted, data relate only to those projects that were operated in Erie proper.

<sup>B</sup> Includes expenditures for Presque Isle Park and municipally-owned parks outside the city limits.

urban area of Mill Creek Township and Wesleyville, involving expenditures of about \$1,400,000 through March 31, 1939, are included in the following description of the project work that has been undertaken by the WPA in Erie.

## Construction

### Storm and Sanitary Sewers and Water Mains

The plain on which Erie is located rises gradually to the first ridge of foothills south of the city and is cut by a series of ravines formed by streams that empty into the lake. Mill Creek, Garrison Run, and Cascade Creek drain most of the area. During a period of heavy rains in 1915, Mill Creek became blocked with driftwood and debris, and when the jam finally gave way the impounded waters swept through the city, causing the loss of 25 lives and property damage in excess of \$2,000,000. The section of the creek that runs through the city has since been confined within a concrete sewer of ample capacity.

In order to avoid similar difficulties in connection with other drainage areas and to remove the flow of rain water from the sanitary sewer system, the city made application to the WPA for several storm sewer projects. Topographical

and hydrological surveys were undertaken by WPA workers to determine the nature of the various drainage areas in the city and vicinity. The findings of the surveys have supplied a scientific basis for planning systems sufficient in capacity to meet the drainage needs of the city and have been utilized in subsequent sewer project work of the WPA.

The largest of the WPA storm sewer projects and the most significant from an engineering standpoint is the Garrison Run job. Garrison Run drains a large area that fringes the business district in the eastern part of Erie. It flows through a somewhat crowded industrial part of the city and under railroad yards and crossings. The construction of a reinforced concrete conduit more than half a mile in length and 90 inches in diameter to carry the stream through the area presented many complicated problems. Open excavation and tunneling in a stratified shale formation were necessary throughout the entire length. Construction was further complicated by an existing sanitary sewer line which intersected the proposed line at the level planned for the new sewer.

This conflict required construction of an inverted siphon to carry the smaller sanitary sewer under the storm sewer.

A method of installing the 90-inch precast concrete pipe in the tunnel sections was adopted which minimized the amount of excavation needed. The tunnel was solidly reinforced with timber and a concrete floor was poured in which tracks were laid. Sections of the sewer were then lowered through the tunnel shaft, mounted on a specially designed car, and moved into place. The space between the timber lining and the pipe was well rammed with a quick drying concrete so that upon the subsequent deterioration of the timber, the street and tracks above the tunnel would not be damaged by excessive settling of the earth.

Two other storm sewer projects, on which similar work was done, improved drainage along portions of Cascade Creek. The Cascade sewer, draining an area of approximately 3,600 acres in the western section of the city, replaced an open ditch and permitted the elimination of a bad jog in the Buffalo-Cleveland highway.

STORM SEWER CONSTRUCTION IN ERIE (BELOW) PART OF THE INVERTED SIPHON UNDER THE GARRISON RUN STORM SEWER AND (LEFT) THE SPECIALLY DESIGNED CAR USED IN PUTTING SECTIONS OF THE STORM SEWER IN PLACE

OPEN-CUT  
SECTION  
OF THE  
LIBERTY  
STREET  
STORM  
SEWER

The Liberty Street storm sewer project involved reconstruction of an old and inadequate system on a branch of Cascade Creek that flows under the business section of the city. Floods occurred here whenever rainfall was heavy. Engineering difficulties similar to those encountered in the work on the Garrison Run sewer were present, particularly on the sections where the tunnelling method of construction was necessary because of the damage to adjoining properties that would have resulted had an open cut been made. The method used on the Garrison Run project was applied to the construction of a 955-foot tunnel, which terminated at a bluff overlooking Lake Erie. Open-cut construction was used over the remaining distance to the lake.

The three storm sewer projects required the installation of almost five miles of trunk line (some as much as nine feet in diameter), 3,198 feet of laterals, 133 manholes, and such supplementary work as grading along the course of the sewer, construction of various retaining walls, replacement of curbs and sidewalks, and improvement of open sections of stream-bed. In addition, the operation of a project near the eastern border of the city drained large swamp areas which were infested by mosquitoes. The work involved grading and cleaning some 95,800 feet of creek channel and digging of nearly two miles of ditches leading to Motch, Cemetery, and McDannel Runs.

After the sanitary sewers were relieved of the large volume of storm waters that had pre-

viously been carried to the city disposal plant, a new trunk line inlet was constructed and the disposal plant was reconditioned. Seven projects were operated in outlying sections of the city to install new sanitary sewer lines. By March 31, 1939, about 13,500 linear feet of pipe had been laid and 48 manholes had been constructed.

In Mill Creek Township the use of individual or subdivision septic tanks resulted in the leakage of considerable quantities of untreated waste into the lake and led the state board of health to order the installation of sanitary sewers. Since the Erie sewage treatment plant, built about 1930, had been designed to meet the expanding needs of the city and surrounding territory, the township arranged with Erie to meter the sewage as it entered the city system, paying for the service. Much of the work on the 14 WPA sanitary sewer projects operated between the fall of 1935 and March 31, 1939, in these residential sections involved the construction of pipe lines along the slopes overlooking the lake.

On the higher sections the work was accomplished with comparatively little difficulty because of the favorable nature of the subsoil. In the lower areas, however, the presence of sand, muck, and water in a gravel vein increased the installation cost. Two lift pumps were installed to raise the sewage from the low-lying levels to the main interceptor. By the end of March 1939 project workers had laid over 92,000 linear feet of tile pipe and had con-

structed 124 manholes at a total cost of \$464,751.

Projects for the installation of water mains have been operated chiefly in new sections of the city. WPA workers have laid two miles of pipe to carry water into sections incorporated within the city limits in 1919 and in 1927. At the state soldiers' and sailors' home an extension was made to the main to improve circulation of water through the water system of the institution. This resulted in a supply of fresher water and a much-needed increase in the pressure, especially at the fire hydrants.

In Mill Creek Township the water supply was chiefly from individual wells and after the installation of the sanitary sewers the insufficiency of water frequently caused sluggish flow of waste matter through the sewers. Consequently the township supervisors sponsored projects for the extension of the Erie water supply system into the township. Between the initiation of the first WPA project for this purpose in December 1935 and the end of March 1939, a total of nearly five miles of water mains had been laid in the outlying sections, particularly in the vicinity of West Lake Road.

## Streets and Related Work

Nearly a third of the expenditures for construction projects operated in Erie have been made in connection with street improvement work. By the end of March 1939, almost \$1,150,000 had been used for this purpose.

Outstanding among the various kinds of street project work is the resurfacing done on a number of the main streets of the business section; this may be noted in the accompanying map. The laying of 135,560 square yards of asphalt has greatly improved the condition of these much-used streets. During the prosecution of the work the project was operated on a 24-hour basis with three shifts of workers in order to reduce the length of time that traffic would be inconvenienced by project activities.

WPA project operations in Erie have included other street improvement work. Drainage, grading, surfacing with gravel or asphalt, and landscaping have been carried on extensively; new curbs, manholes, and gutters have been

built; and new streets have been opened. For several blocks in one part of the city a railroad track runs along one of the principal highways on which most of the truck traffic is routed. Although provided with a substantial concrete foundation, the asphalt surface on the street was continually cracking and crumbling as a result of vibration caused by passing trains. A WPA project was prosecuted to construct separate concrete bases, divided by asphaltic joints, for the railroad track and for the roadway on either side. The asphalt street surface is no longer subject to faults resulting from heavy freight traffic since it is separated from the tracks. The railroad supplied the city with all the material needed for the work.

A small parkway in the center of one of the main highways leading to the Erie Airport had been the scene of several serious accidents because a dip in the road under a railroad bridge obscured the parkway to motorists approaching from the east. Removal of the parkway by WPA workers and paving of the area has served to eliminate this dangerous traffic hazard.

Numerous other types of projects have contributed to the safety and convenience of motorists and pedestrians. On one project an average of eight men were employed for four months in making and erecting 986 street signs for 246 unposted intersections. Traffic counts were made at 130 stations to be used by the planning commission in redesignating highway routes through the city. The city shade tree commission sponsored a city-wide project for the inspection and removal of trees that were dead or were otherwise a source of danger, and trees whose excessive root growth interfered with subsurface utilities.

Considerable WPA improvement work has been undertaken on many of the streets in the expanding suburban areas outside the city limits. Numerous short streets in these outlying districts, particularly those just south and west of the city in Mill Creek Township, were graded and graveled and the adjacent ditches cleaned and, in some instances, riprapped. In addition, outlying sections of some of the longer streets such as Grandview Boulevard along the southern city limit and South Gore Road, parallel to and just south

of the boulevard, were widened and reconditioned. Although this work was located beyond the city limits, most of the workmen on the projects came from within Erie.

Project work on the state highway system in Erie County furnished a significant percentage of the total WPA employment for Erie city workers during certain periods. Although employment figures are not available separately for workers from the city, it has been estimated that from 60 to 75 percent of the total number employed on these projects at various periods were Erie residents.

### Airport

City-sponsored project work at Port Erie, the municipally-owned airport located about five miles west of the business center of the city at the intersection of two state highways, has resulted in the development of a first-class airport equipped for both day and night operations. The project was completed in the autumn of 1937 and air-mail service was inaugurated the following spring.

An important phase of the work was the construction of three hard-surfaced runways.

It was first planned to hard-surface only one runway and to line-grade and seed the other two. Through an additional allotment of funds, it became possible to make all three with slag base and asphalt surface. The southwest-northeast runway is 150 feet wide and 3,070 feet long, and the other two, running east-west and north-south, are 100 feet wide and, respectively, 2,610 and 2,500 feet in length.

Other improvements to the landing field included clearing of a wooded area which constituted an obstruction at one end of the field, placement of power lines underground, grading of the entire 140-acre field, installation of a complete drainage system, and extension of the lighting system. Project workers also built a hangar equipped with concrete aprons and taxi strips to the runways. Constructed of 10-inch concrete blocks, the hangar is 80 by 100 feet in size and has storage space for 15 planes other than transports. Repair shops, office, and waiting room are in a structure twenty feet wide that is built along the entire length of the 80-foot side of the hangar.

The airport project provided employment for an average of 350 persons during most of its 19 months of operation, with the exception

PORT ERIE, DEVELOPED AS A FIRST-CLASS AIRPORT THROUGH WPA PROJECT OPERATIONS AND ITS COMBINED HANGAR AND ADMINISTRATION BUILDING

of the winter months when weather conditions limited the amount of work that could be done. In the spring of 1937 the job was put on a two-shift basis, each shift working six hours a day and five days a week.

## Parks and Recreational Facilities

A notable amount of work has been undertaken by the WPA in developing recreational facilities in Erie's public parks and school playgrounds. These activities, promoted by agencies such as the Erie School Board, the City Park Commission, and the State Park and Harbor Commission, extend beyond the city limits of Erie to the development of facilities on Presque Isle Peninsula and in Zueck Park.

Two projects have been prosecuted to improve the grounds and buildings of Glenwood Park, the 128-acre municipally-owned recreational center in the southern part of Erie where a nine-hole golf course, tennis courts, a baseball field, a modern zoo building, and picnic grounds are located. Mill Creek flows through the entire length of the park. Through a WPA project the banks of the creek were rippedraped to prevent further erosion and extensive work was done in cleaning out the creek channel, including the excavation of 7,000 cubic yards of dirt and refuse. Project workers also cleared 22 acres of the park, removed 125 dead trees, and made 10 horse-shoe courts.

The main entrance to the park was by way of a single-lane wooden bridge which was inadequate to handle the peak load of 10,000 cars entering the park on week-ends and holidays. The old bridge has been replaced with a two-lane, reinforced concrete bridge. Following the elimination of this traffic bottleneck, a decided increase in the use of the park facilities was noted, especially of the baseball diamond on which admission-free Twilight League games were played. A shelter house and pens for reindeer, buffalo, and other animals were constructed; the building is of especial interest from an architectural standpoint. In order to provide the necessary number of pens within the limited space available a seven-sided brick structure with glass brick lighting sections was built. Other

BRIDGE AT ENTRANCE TO GLENWOOD PARK WHICH REPLACED A ONE-LANE STRUCTURE

work completed on the park projects included the construction of flagstone walks and stairways, grading, and seeding.

The municipal golf course, formerly a privately-owned course that was acquired by the city in 1930, received needed improvements through a WPA project employing an average of 45 men for 14 months. The men installed a drainage system and a sprinkler system, relocated the 18 holes and hazards, improved the fairways, built benches, and reconditioned the club and caddy houses and a rustic foot-bridge. The course and its facilities were utilized by some 16,000 persons in 1938.

The Bay Front slope adjoining Lakeside Park along the Erie waterfront until recently had been used as a dump. This slope, which is 70 feet in depth, was cleared of rubbish, graded, and seeded through a WPA project sponsored by the city's bureau of streets. The workers built a brick gutter and excavated ditches for the drainage of the three

SEVEN-SIDED ANIMAL HOUSE CONSTRUCTED IN GLENWOOD PARK

acres on the slope. Another city-owned recreational area improved by WPA labor is the 19½-acre wooded tract in Mill Creek Township given to the city and named Zuck Park after its donor. Although the area is part of the City Park Development Plan, lack of municipal funds had prevented the conversion of this land into a park and recreation ground. With the aid of the WPA, the grounds have been grubbed and graded; and various athletic and picnic facilities, including horse-shoe courts, a baseball diamond, a children's playground, picnic tables, and fireplaces, have been constructed. Provision for the maintenance of the park has been made by the city.

Presque Isle Peninsula, which extends into Lake Erie to form the harbor of the community, has been preserved in its wild and natural condition as a state park. WPA work there has been designed to facilitate the public's use and enjoyment of its 3,400 acres of woodland, ponds, and beaches. Among the project activities conducted on the peninsula were the clearing and graveling of 10 miles of fire trails eight feet wide, the building of 100 combination picnic tables and benches, and the renovation of two bathhouses and of 800 old tables. Project workers covered over 400 acres removing poisonous vines and shrubs (ivy, oak, and sumac) and planting shrubs and saplings. They converted fallen timber into 100,000 board feet of lumber and 4,000 cords of firewood for use in the park.

An administration building of rustic design was erected to house the police headquarters and rest-rooms, and parking areas were laid out. Along one of the beaches on the lake side of the peninsula a specially designed boardwalk was built; during the seasons when it is not used as a beach promenade this structure can be turned over to collect and hold the sand that would otherwise be washed away. Another type of work done in the park was the digging of a channel between two of the ponds to eliminate the stagnant condition of one of them.

Among the WPA projects to improve recreational facilities in Erie are those involving athletic fields and playgrounds. Considerable work was undertaken at Erie Stadium, which has a seating capacity of over 13,000 and is used for football, track, and field events by all

the high schools and for activities of local civic organizations. The stadium was built in 1925 on an earth fill. Water seeped through joints in the concrete and, when it froze, damaged the supports upon which the seats were built. This condition was remedied by replacing 1,200 cubic yards of reinforced concrete and inserting steel beams to bear the weight of the entire structure. WPA workers also laid a sidewalk; constructed steps, curbs, and drainage gutters; renovated the bleacher seats; and, after grading and applying top soil and fertilizer, seeded over 26,000 square feet at the south end of the field.

At Roosevelt Junior High School, a grandstand and two bleachers have been erected of reinforced concrete to replace the wooden grandstand destroyed by fire in 1937. Individual folding grandstand seats—1,640 in number—have been installed; locker rooms, showers, toilets, drinking fountains, and storage spaces built under the grandstand; and a press box built on the roof. The baseball diamond, also laid out by WPA workers, will be used in all inter-school games and for the home games of the Erie professional baseball team, a member of the Middle Atlantic League. Additional work on this project includes construction of a section of concrete wall, wire fencing, gates, and a quarter-mile cinder running track.

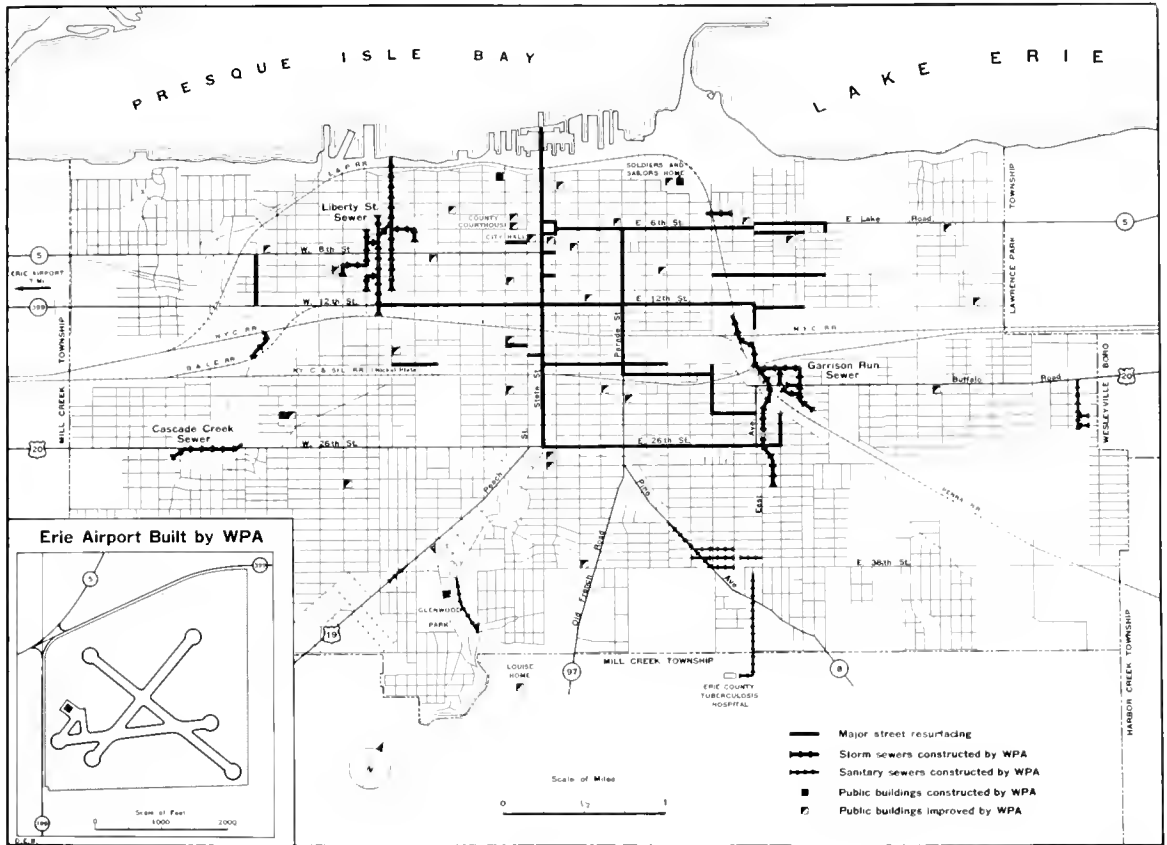

Many of the city's playgrounds have benefited by the grading and beautifying of school grounds undertaken in an effort to keep the children from playing in the streets. As a safety measure nearly 300 trees on or near the grounds were trimmed and the dead trees removed. A two-story frame house on property adjoining the Jones School was razed and the area used to extend the playground.

## Public Buildings

Public buildings projects in Erie have been confined largely to improvement and renovation. The work done on school buildings has consisted chiefly of restoring woodwork and plastering, painting walls and ceilings, reputting doors and windows, and repointing brick and stone work. The school district warehouse received needed miscellaneous improvements in the form of interior painting, moving of partitions, closing window openings, and

## WPA CONSTRUCTION WORK OF SELECTED TYPES IN ERIE, PA.

Through March 31, 1939

WPA 3229

restoring the roof. Miscellaneous improvements were made to the interior of the Erie Public Library, an adjunct to the city school system. An abandoned steam boiler and its brick foundation were removed, and a wooden floor was constructed to convert the boiler room into a book storage room.

WPA work was also performed on many other public buildings, both city and county structures. The county courthouse and jail were rehabilitated and part of the yard was converted into a paved parking area. The mayor's office was renovated and a wall fence built around the armory. A new concrete-block double garage was erected near the State Fish Hatchery and Aquarium. Lack of city funds had prevented adequate improvements

to the house in which Commodore Perry lived during the building of the American fleet in 1812, an historically important structure in Erie County that had been restored by the city in 1923 as a memorial to the Commodore. The necessary restoration work was completed through WPA work.

The Pennsylvania Soldiers' and Sailors' Home, occupying a tract of 133 acres at the foot of Ash Street overlooking Presque Isle Bay, houses an average of 350 war veterans. Through a number of WPA buildings and grounds projects, all chimneys, foundation walls, and other exterior brickwork have been pointed and loose brick reset; windows have been caulked and weather-stripped; roofs, drainspouts, and gutters have been replaced;

and an old piggery has been torn down and replaced by a larger well-drained concrete structure. Other projects at the home have provided for the landscaping of the grounds, tree surgery, and the installation of a sprinkler system for the lawns which required the placement of more than two miles of pipe and over 600 connections.

The Erie county health and tuberculosis association is cosponsoring a WPA project proposed by the county commissioners to convert the Louise Home Sanatorium in Mill Creek Township into an institution for the care and observation of children with sub-standard health. The home was originally a farmhouse on the estate of a wealthy man who gave it to the tuberculosis association about 40 years ago for use in the treatment of active pulmonary tuberculosis. Since the recent completion of a new county hospital for this purpose, the Louise Home has not been in use. The WPA is constructing a one-story frame addition and two dormitory wings, and making improvements to the existing building, including the construction of a basement under the entire structure. The grounds are to be landscaped and a cinder roadway and parking area constructed. When completed, the home will not only have a housing capacity of more than 50 children, with separate wings for boys and girls, but will also contain adequate schoolroom space.

## Professional and Service Work

Sewing and white collar projects in Erie have provided a substantial fraction of total WPA employment and a large share of employment for women. The number of women assigned to jobs in sewing rooms alone has exceeded 500 during much of the year ending March 31, 1939; this total does not include the many women from Erie who were working on the Wesleyville sewing project, just outside the city limits. Over 300 persons were employed on the various locally-sponsored professional and service projects during most of the year and 30 to 40 (predominately professional workers) were engaged on the Federal arts program. Approximately 70 employees were working in leadership capacities on the recreation and education programs, and a smaller group, averaging about 20 per-

sons, distributed surplus commodities from the state warehouse in Erie to needy persons in the city and its environs.

TABLE 24.—NUMBER OF PERSONS EMPLOYED ON WPA-OPERATED PROJECTS, BY TYPES OF PROJECTS

| ERIE, PENNSYLVANIA                      |       |     |       |

| Distribution of surplus commodities     | 26    | 22  | 4     |

A Does not include the 2,422 men employed on the state highway project or the 283 persons employed on Mill Creek Township and Wesleyville projects, approximately three-fourths of the workers in these groups were Erie residents.

## Sewing Rooms

Two-thirds of the 600 women employed in Erie on WPA projects during the last week in March 1939 were engaged in sewing garments for distribution to needy persons. Rooms, supplies, and equipment for the five units operating in Erie have been supplied largely by cooperating local charitable organizations, schools, and churches. In two large rooms at the state soldiers' and sailors' home work is carried on in two shifts to obtain the maximum use of the electrically driven machines.

Work in the sewing rooms has included the production of 213,000 garments and other articles and the renovation and repair of donated clothing and household furnishings for distribution to families certified as in need by the state department of public assistance and to public institutions. Uniforms for the housekeeping aides also were made on the sewing projects. From scrap materials the women have made cloth toys, rag rugs, and other household articles. Products of the sewing rooms are sent to the warehouse, maintained in Erie by the state department of public assistance, from which they, together with sur-

plus commodities, are distributed by WPA employees.

## Education and Recreation

The relationship between the recreation and the adult education activities of the WPA in Erie has been close. Schools, churches, civic organizations, and city officials have cooperated in providing space for meetings of the recreational and educational groups, making 42 centers available for the work. Activities under the two programs have been varied, with as many as 275 different groups totaling 3,442 participants being supervised in planned recreation or in education classes (such as naturalization, public affairs, vocational training, pre-school, and general adult education) by the 73 WPA leaders employed during March 1939.

Classes in literacy and naturalization are proving of particular importance since a considerable portion of the population are foreign born or children of foreign-born parents. Leaders selected whenever possible from the same nationality group as the enrollees aid them in obtaining records necessary for naturalization papers as well as instruct them in the rudiments of the English language and in the privileges and responsibilities of citizenship in their new homeland. After naturalization, the new citizens are encouraged to enroll in classes in public affairs to acquaint themselves more fully with local, national, and international events.

One of the most popular among the general adult education classes is the safe driving school. Sponsored by a local safe driving school council, in cooperation with the Pennsylvania Motor Police and the Governor's Highway Safety Council, the school gives twenty hours of classroom instruction in traffic problems and driving technique and at least twenty hours of practice driving in cars equipped with dual controls. Such cars are furnished by various automotive dealers in or near Erie. By March 1939, 131 enrollees had become licensed operators since the school opened the preceding August.

Participants in the WPA recreation activities have shown great interest in music. During March 1939 there were 65 orchestra and choral groups comprising more than 700 persons, most

of whom had had no previous experience in orchestral or choral work. Other recreational activities under the leadership of WPA workers—dramatic groups, handicraft work, and various sports, such as softball, squash, swimming, and volleyball—also have been of value in developing the capacities of the participants in creating new leisure-time interests.

## Clerical and Service Projects

Projects operated primarily to provide employment for clerical and other nonprofessional white collar workers have covered a wide variety of work. Housekeeping aides have given temporary help to low-income families in times of emergency. Young women have been trained for housework positions in private homes through the household service demonstration project. As many as 421 volumes have been transcribed into Braille for blind readers. WPA nurses have assisted regular school nurses in examining school children, in administering immunization treatments, and in notifying parents of remediable physical defects discovered in their children.

Clerical workers on bookmending projects have renovated more than 30,000 books and cataloged 6,700 volumes in city and county school libraries, in the courthouse, and in the library of the state soldiers' and sailors' home. Various kinds of city and county records and documents have been sorted and cataloged, and surveys—both engineering and archeological—have been undertaken. Some of the more

CONTRAST BETWEEN PUBLIC RECORDS BEFORE AND AFTER RENOVATION

important of these projects are described in the following paragraphs.

Women serving as housekeeping aides are instructed at training centers in methods of doing household work under the conditions they encounter in the homes to which they are assigned. The usual situation in the homes they enter is a sick mother or a maternity case in a family that is not financially able to hire the help needed for ordinary work of cleaning, cooking, and getting the children ready for school. Occasionally, however, the families to which the aides are assigned upon recommendation of approved social agencies face special problems of longer standing. Illustrative of the less frequently encountered situations is the home of two schoolboys who, although obtaining high grades in their studies, came to school unkempt and undernourished. Investigation disclosed that the boys were motherless, that their diet consisted almost entirely of uncooked food, that they bathed infrequently, and that the home was seldom, if ever, cleaned. The housekeeping aide assigned to this home not only cleaned the house but also taught the boys to cook their food, attend to their personal cleanliness, and keep the house in order.

WPA HOUSEKEEPING AIDES RECEIVING INSTRUCTIONS AT TRAINING CENTER

Household service demonstration work was conducted in 1938 on a related type of project. Through this kind of activity 30 girls from Erie's relief rolls were trained for positions in private homes. Eighteen in the group graduated and

12 were placed in private employment. The training of another group of 16 was begun in June 1939. Trainees receive approximately a half of the security wage paid to unskilled workers.

A Braille project on which some 40 workers have been employed is of particular interest. The nearest source of books for blind people in Erie was the Carnegie Library in Pittsburgh. Even there, the choice of material was limited. The 421 volumes that WPA employees had transcribed into Braille by April 1939 and bound for free distribution to the blind of Erie County were selected for transcription on the basis of requests made by the blind at local libraries. The total comprised 334 volumes of fiction, 55 volumes of nonfiction (including several textbooks and a cookbook), 6 volumes of poems, and 26 volumes of short stories and articles.

Thousands of valuable documents and photographs belonging to the Erie County Historical Society that were stacked in open boxes throughout the Old Customs House were cleaned, sorted, cataloged, and filed by WPA workers in 1936. A consolidated loose-leaf ledger index of the 36,000 naturalization records in the county was prepared and a new file of petitions transcribed. Over 380,000 records in the county courthouse were indexed and refiled and are being efficiently maintained through a system, established by court order, for their withdrawal and replacement. Since most of the large record books filed in the recorder's office were badly worn and could not be replaced, project employees mended and rebound them. The codification of the city building regulations, made by WPA workers, is being used constantly in the consideration of applications for construction permits, and an index file of all existing building permits in the city is in preparation.

A county-sponsored project for the establishment of a card system for tax records has resulted in a great saving of time in the county treasurer's office. Prior to 1936, records of delinquent taxes were copied in large tax docket books and transmitted to the county treasurer for collection. With legislation passed during the depression to postpone tax-sales and permit payment of delinquent taxes in annual installments over a period of years, the number of

dockets necessary to contain these records increased from one in 1929 to eight in 1936. Each October, when payments became due, taxpayers stood in line for hours while each of the eight record books was searched to ascertain all back taxes before a receipt for payment could be issued.

WPA project workers installed a card system containing a card for each property owner on which is a record of his tax payments over a period of ten years. Under this system the average time required to compute the amount of taxes payable was reduced from over half an hour to less than five minutes and the possibility of overlooking items was eliminated. The county has permanently retained one of the project employees as supervisor of the clerks who post these records.

Under another tax project property identification maps and an index showing the location and area of every parcel of property in the county are being prepared for the use of the county engineer and assessor. WPA workers also have installed systems for taking and maintaining inventories of the equipment, property, and supplies owned by public institutions. They have prepared a card index of all births, deaths, and marriages taking place between 1820 and 1906; this index is based on back files of local newspapers, the only source of such information because the Pennsylvania Vital Statistics Act was not passed until 1906 and all courthouse records had been destroyed by fire near the end of the nineteenth century.

Among the other project activities were several engineering surveys such as the tract line study of the metropolitan area of the city which identified the almost completely obliterated tract lines and corners established at the time of the original purchase of the land. The findings of the tract survey facilitate the determination of the validity of titles, the making of subdivisions, and other surveying and mapping work. A topographic survey of Presque Isle Peninsula and Bay aids in the planning of more adequate fire protection, reforestation, recording of riparian growth, and study of erosion of shore line.

Of particular interest to historians and archeologists are a group of projects sponsored by the county and the state historical commis-

sion for the collection of information concerning the early history of Erie and its environs. The work has included engineering and archeological surveys, excavation of sites of Indian relics, and extensive research in early French and English documents.

Several units of Nation-wide projects have operated in Erie. Employees on the Federal writers' project compiled a city and county guide, assembled local material for the state guide, and assisted in preparing maps, pamphlets, and reports. Eighteen musicians, employed on the Federal music project, have given approximately 600 free concerts in the schools, parks, public institutions, and on the radio. Clerical workers engaged on the survey of historical records prepared an inventory of the county archives and cataloged newspaper holdings, manuscript collections, and maps located in the public library. Measurements of 34 historical buildings were obtained by workers on an historic American building survey undertaken to make standard architectural drawings for transmission, together with photographs, to the Fine Arts Division of the Library of Congress.

---

The project work initiated in Erie by the WPA has reflected the particular needs of the community during the period from 1935 to 1939. Emphasis given the construction of storm and sanitary sewers resulted from the potential danger that flooding of the existing sewers of the city would cause, from the need for segregating the storm and sanitary sewage, and from the health menace originating in areas not served by the sanitary system.

The extensive street improvement work that has been done, particularly the resurfacing in the business section, has contributed both to the comfort of motorists and to the sightliness of the streets.

The airport development work represents another kind of demand for project prosecution, in this case the result of increasing reliance upon air transportation.

These and other kinds of construction work and the white collar and sewing room activities that have been carried on in Erie have their counterparts in the WPA programs of most

cities. The relative importance of each type of project in Erie, however, has depended on the specific needs of the city and the occupational skills of unemployed Erie workers assigned to the program. The entire WPA program of project work for the unemployed has been supplemented in Erie by a limited amount of

work performed on projects operated by other Federal agencies (mainly, the Coast Guard and the Bureaus of Labor Statistics and of Internal Revenue) for the employment of relief workers, and by the programs of the National Youth Administration and the Civilian Conservation Corps conducted for young people.

# EMPLOYMENT AND EMPLOYEES UNDER THE WPA

THE APPROPRIATIONS to the WPA for the fiscal year ending in June 1939 determined the pattern of WPA employment during the year. Under the Emergency Relief Appropriation Act of 1938, an employment average of about 2,800,000 persons was contemplated for the first eight months of the year. The act provided, however, that if some extraordinary emergency or unusual circumstance arose which had not been anticipated at the beginning of the fiscal year, the President might waive the required distribution of funds over the eight months and shorten the period by as much as one month. Such shortening of the period became necessary largely as a result of four developments: the increase, prior to the passage of the act, in the number of unemployed persons awaiting assignment to WPA project work; the subsequent growth in the number of unemployed who were in need after they had exhausted their private resources and unemployment compensation payments; the hurricane in New England; and the adverse effect of the foreign situation on prices of cotton and certain other commodities entering into the world market. With the eight-month period cut to seven months an average employment of about 3,200,000 was possible. Appropriations for the remainder of the year (Public Resolution No. 1, 76th Congress, approved February 4, 1939, and Public Resolution No. 10, 76th Congress, approved April 13, 1939) provided for the employment of a little less than 3,000,000 WPA workers until April 1 and for a successively reduced number

in each month thereafter until a total smaller by 400,000 was reached in June. The WPA employment for which provision was made in the appropriations included an average of roughly 100,000 workers on Federal agency projects to be financed with transferred WPA funds.

## Trends in WPA Employment <sup>1</sup>

Following closely the general pattern provided for by the appropriations, employment on projects financed with WPA funds rose in the first four months of the fiscal year from nearly 3,000,000 workers to a peak of about 3,350,000. By the end of December the total number employed had fallen to 3,100,000. This was not far from the 3,000,000 level that was substantially maintained until early April 1939. By the end of the fiscal year, however, successive reductions each month had brought to 2,551,000 (as of June 28, 1939) the number of persons at work on WPA-financed projects. The total at the close of the year represented a decline of about 800,000 from the year's peak and of over 400,000 from the March figure.

Projects operated by the WPA supplied by far the largest share of the employment total throughout the year. Jobs provided by other Federal agencies on projects similar in type to those of the WPA and financed by the WPA funds transferred under Section 3 of the ERA

<sup>1</sup> Detailed data on employment are shown in Tables I-IV of the appendix.

The expansion in WPA employment which began in October 1937 and culminated a year later is attributable primarily to the unemployment situation which developed after the reversal in business conditions that occurred in the latter half of 1937. Many of the workers who had lost their jobs when conditions grew worse during the 9 or 10 months ending with June 1938 were able to support themselves for a time on their private resources and their unemployment compensation payments in cases where these were due; but the exhaustion of such resources later forced the workers to apply for aid and ultimately necessitated a large expansion of the WPA program. This influence was of primary importance in the upward trend of the WPA employment total until late in the calendar year 1938. Part of the upswing, however, and particularly that taking place during July and August reflected the provision of jobs for needy workers who had previously been engaged in other Federal work and construction activities. Such persons probably accounted for roughly 100,000 of the rise during the late summer months of 1938. The hurricane in New England and the condition of southern tenant farmers and farm laborers also contributed to the rise in WPA employment at that time. In the months of August, September, and October 159,000 of the country's increase of 278,000 WPA workers took place in the South, where the relative gain was about five times as large as in the rest of the country. The rise in WPA employment in New England over the same three-month period amounted to nearly 30,000 persons, largely emergency workers who were employed as a result of the September hurricane and floods in the New England area.

Among the persons working on projects operated by the WPA at the end of June 1939 were about 353,000 women. This number accounted for almost 15 percent of the WPA employment at the time, a larger proportion than women had represented at any other period during the year, as may be seen in Table 26. The June figure for women, however, was about 75,000 below the peak reached in the autumn of 1938. Although an increasingly larger number of jobs had been provided for needy unemployed women in the period of rapid expansion

| 1938                                 | March 30     | 335,612 | 13.7                   |
|                                      | June 29      | 372,058 | 13.9                   |
|                                      | September 28 | 409,954 | 13.1                   |
|                                      | December 28  | 465,665 | 13.5                   |
| 1939                                 | March 29     | 391,442 | 13.6                   |
|                                      | June 28      | 352,784 | 14.5                   |

in WPA employment after October 1937, the proportion of women workers on WPA projects declined from approximately 18 percent in October 1937 to about 13 percent a year later. The decrease was due chiefly to the relatively greater incidence of the growing unemployment on men.

Federal agency project work financed with transferred WPA funds provided employment at the end of June 1939 for about 131,000 persons. The largest number of these workers, 39,000, were working on projects of the Quartermaster Corps of the War Department. The Soil Conservation Service of the Department of Agriculture employed about 18,000 workers, and two other agencies—the National Park Service of the Department of the Interior and the Navy's Bureau of Yards and Docks—each employed about 16,000 persons. The only other Federal agencies having more than 10,000 persons at work on WPA-financed projects were the Bureau of Entomology and Plant Quarantine and the Forest Service of the Department of Agriculture with 14,000 and 13,000 persons, respectively. (See Table IV of the appendix.)

Almost all the workers on projects financed with WPA funds are persons referred to the WPA by local public relief agencies and certified as in need of relief. At the end of the year certified workers represented 96.5 percent

| Quartermaster Corps                   | 22,507                | 21,298               | 30,433            | 39,128           |

of the total employed on WPA-operated projects and 95.0 percent of the number employed on Federal agency projects financed with WPA funds. Nonrelief employees typically comprise supervisory personnel and skilled workers essential to project operation who cannot be secured from the relief rolls. The relief percentages displayed only small variation during the year ending in June 1939. Comparison with the earlier years reveals a slight increase in the proportion of certified workers on WPA-operated projects but at no time since the program's initiation have certified personnel constituted less than 94 percent of the total employment on projects prosecuted by the WPA.

## Employment on Different Types of WPA Projects

A widely varied project program is operated by the WPA because of the diverse requirements for public improvements in the different communities and because of the many kinds of occupational skills possessed by the unemployed persons for whom the WPA provides jobs. The construction work that the WPA has conducted in various fields, however, has always supplied the preponderant share of employment, usually accounting for approximately four out of every five project employees. As of June 21, 1939, almost 1,941,000 persons were at work on construction projects; these persons represented about 80 percent of the

TABLE 28.—NUMBER OF PERSONS EMPLOYED ON WPA-OPERATED PROJECTS, BY TYPES OF PROJECTS<sup>A</sup>

JUNE 21, 1939

| Type of Project                                        | Number    | Percent of Total |
|--------------------------------------------------------|-----------|------------------|
| Total                                                  | 2,435,930 | 100.0            |

<sup>A</sup> Data apply to continental United States only.

CONSTRUCTION  
WORKERS PUT-  
TING IN THE  
FOUNDATION FOR  
A NEW PUBLIC  
BUILDING

total employment—a percentage slightly lower than that obtaining during most of the year. The remainder of the WPA workers were employed on white collar and sewing projects.

The highway, road, and street projects of the WPA, as a group, have consistently provided jobs for more workers than any other type of project. On this kind of work, which supplements an important sphere of regular public activity in both urban and rural areas and has come to be recognized as particularly well-suited in many cases to a work project program, almost 1,040,000 WPA workers, or about 427 out of every 1,000, were employed at the end of June 1939. (See Table 28.)

Three other types of projects accounted for a large share of the remaining employment on construction jobs—projects for the construction or improvement of sewer and water systems, school and other public buildings projects, and projects for the development of parks and other recreational facilities. These kinds of projects provided jobs at the end of June for 94, 92, and 71 workers, respectively, out of every 1,000. Over 100,000 workers, or 42 from each 1,000, were employed on flood control and other conservation projects; almost 50,000 were engaged in the construction of airports and related work, and approximately the same number were employed on sanitation and health projects.

About 495,000 WPA workers, representing 320 out of every 1,000 employed on June 21,

1939, were working on projects that did not involve construction work. These workers held jobs on white collar and sewing projects which accounted for 129 and 74 persons, respectively, out of each 1,000 workers. It is these projects which have provided most of the employment available to women workers under the WPA program. Women accounted for almost half the number employed on white collar projects, which include educational and recreational work as well as the various kinds of professional and service activities. Women were also employed in large numbers on sewing projects where they represented 96 percent of the 180,000 persons engaged in making clothing and household articles for distribution to needy families and public institutions.

Comparisons with earlier periods show that there has been important shifting in the distribution of project workers among the several types of projects. Highway and street work, for example, which accounted for 427 out of each 1,000 employees in June 1939 and 473 in September 1938, had provided only 357 out of each 1,000 jobs in March and September of 1937. On the other hand, the proportions of total workers who were employed on recreational facility and sewing projects, and to a more limited extent on public buildings projects, declined in relative importance during most of the fiscal year and were lower during the year than in most of the preceding periods. The various changes in the distribution of WPA

TABLE 29 DISTRIBUTION OF EACH 1,000 PERSONS EMPLOYED ON WPA-OPERATED PROJECTS, BY MAJOR TYPES OF PROJECTS <sup>A</sup>SELECTED PERIODS, MARCH 1936 TO JUNE 1939 <sup>B</sup>

<sup>A</sup> Data apply to continental United States only.<sup>B</sup> Data for March and September 1936 and March 1937 apply to the last half of the month; for September 1937, the entire month.<sup>C</sup> Not comparable with later periods since miscellaneous group for March 1936 includes certain types of work which have subsequently been included under white collar projects.

employment for the Nation as a whole, shown in Table 29, are brought about by diverse influences. Seasonal factors affect the employment on the different types of projects; in some instances, these result from changes in private employment opportunities in agriculture and other fields of activity and in others they are necessitated by adjustments to weather conditions that are required in a program of project work. Other important factors, some of them closely interrelated, are the facility with which large numbers of unskilled workers can be assigned to certain types of projects—such as highway, road, and street work—when employment must be expanded rapidly, the diversity in the trends of private employment in different sections of the country, the changes in the occupational distribution of persons assigned to WPA work, and the variations in the local needs for project work in different communities and at different times.

The extent of the wide variation in the composition of individual state WPA programs in response to the many influences that bear upon project operations may be seen in Tables VI and VII of the appendix. As against 43 percent of all workers having employment on highway, road, and street projects on a Nation-wide basis in June 1939, more than 60 percent of the workers were so employed in four states—Arkansas, West Virginia, Kentucky, and Ten-

nessee. In nine other states this kind of work engaged between 50 and 60 percent of the total number. On the other hand, highway work was comparatively unimportant in six areas—New York City, the District of Columbia, California, Delaware, New Hampshire, and Rhode Island—where less than 20 percent of the WPA jobs were provided on projects of this type. Where the emphasis given highway, road, and street projects was relatively limited, other types of construction work, of course, assumed greater importance.

White collar jobs constituted from about 6 to 30 percent of the various state totals but only in New York City, the District of Columbia, and California did they rise to more than 20 percent of the total. In Texas, Delaware, Nevada, Florida, Wyoming, and New Hampshire sewing projects were comparatively important, with at least 15 percent of all WPA workers in the state engaged in this type of activity.

### Workers in Different Wage Classes

The distribution of persons employed on WPA projects according to the degrees of skill of their work is of importance partly because of its influence upon the types of projects that can be operated and partly because it constitutes a major basis for differentiation in the

monthly earnings of WPA workers. Practically all (about 960 per 1,000) of the project workers were paid during the year according to the established schedule of monthly security earnings which provided for different monthly payments to workers according to whether they were assigned to unskilled, intermediate (semi-skilled), skilled, or professional and technical jobs. Persons assigned at the unskilled rates at the end of the fiscal year (as of June 21, 1939) constituted 658 out of each 1,000 project employees. Skilled and intermediate workers accounted for 129 and 142 persons, respectively, and professional and technical workers for 35, on the per thousand basis. The remaining 36 out of each 1,000 employees were assigned as nonsecurity wage workers; they included the technical and supervisory personnel essential to project operation that could not be obtained at the monthly security rates of the WPA.

The relative numbers of WPA workers assigned at unskilled rates declined somewhat during the year ending in June 1939 and a compensating rise occurred in the skilled and semiskilled groups. These changes reflect the interplay of the many factors influencing the composition of the WPA employment total. The downward trend of total employment was of particular importance in the latter months of the year. Efficient operation of a curtailed program does not permit the proportionate reduction of workers among the various grades of skill. The intermediate, skilled, technical, and professional persons cannot be released in the same relative numbers as the unskilled. However, when employment can be expanded again, the unskilled workers usually comprise a proportionately large group of the accessions.

Differences among the various types of projects in the distribution of workers according

<sup>A</sup> Data apply to continental United States only.

to wage classes are shown in Table 31. Unskilled workers were relatively most numerous on road and street, conservation, and sewing projects on each of which they made up more than three-quarters of the total. A majority of the WPA workers in the professional and technical group were employed on white collar projects. These projects, as well as the projects for the construction or improvements of public buildings and of airports, provided work for relatively large numbers of the skilled and semiskilled employees.

### Workers in Different Urbanization Groups

Another distribution of WPA workers that is significant because of its relation to monthly earnings is that which takes into account the size of the community in which project work is prosecuted. At the end of June 1939, 423 out of every 1,000 WPA workers were employed in the most populous areas of the country—counties containing cities that in 1930 had a population of 100,000 or more persons (Table 32). In counties whose largest cities had between 25,000 and 50,000 and between 50,000 and 100,000 inhabitants employment was provided for 82 and 74, respectively, out of each 1,000 WPA workers. Less populous counties—those with towns of from 5,000 to 25,000 population—had 224 out of each 1,000 WPA workers. The

remaining 197 of each 1,000 were at work in rural counties which included no municipality with as many as 5,000 inhabitants in 1930.

<sup>A</sup> Data apply to continental United States only.<sup>B</sup> Urbanization groupings are based upon a classification of counties according to the 1930 population of the largest municipality in each county.<sup>C</sup> Data apply to the entire month.<sup>D</sup> Source: Fifteenth Census of the United States, 1930, Population.

Minor changes have occurred in the general pattern of the urbanization distribution of WPA employees. During the past year the proportion of workers located in the counties containing cities of 100,000 or more inhabitants decreased from 456 to 423 out of every 1,000 WPA workers. In fact, over most of the period since November 1937 employment in the populous areas had shown a gradual relative decline.

Most of the offsetting increases have occurred in counties whose largest municipalities were towns with 25,000 or fewer inhabitants.

Changes over the course of the past year have in general tended to bring the distribution of WPA workers more nearly into line with the distribution of all gainful workers in 1930, as may be seen in Table 32. The proportion of WPA workers in the most populous areas, for example, decreased from 456 per 1,000 in June 1938 to 423 in June 1939; gainful workers in these areas accounted for 430 out of every 1,000 in the Nation in 1930. During the same period, on the other hand, the proportion of WPA workers in rural counties increased from 175 to 197 out of each 1,000, as compared with 206 gainful workers out of each 1,000 in rural counties in 1930. The Farm Security Administration, through which funds are supplied to farm families, also operates in rural counties.

### Labor Turnover

WPA project employees are a constantly changing group, with thousands of workers leaving the program in the course of each month and thousands of eligible unemployed persons being added. During the year ending in June 1939 the number of workers certified as in need of relief who were separated each

month from WPA-financed projects ranged from 163,000 to over 340,000 persons, or from 6 to 12 percent of the total number employed at the beginning of the month. Monthly accessions, on the other hand, varied between 97,000 and 327,000 persons and represented from 3 to over 11 percent of total employment.

The rapid advances that took place in the WPA employment total during the period from July through October 1938 have their counterparts in the turnover rates that apply to the period. More than 300,000 persons were added to the program per month during this period. Well over half of the newly assigned persons had never before worked on WPA projects; the remainder represented workers who were reassigned to WPA work after absences of varying lengths. The number of workers leaving the WPA program each month during the four-month period of expansion ranged from 163,000 to 228,000 persons, of whom more than 70 percent left of their own volition. The excess of accessions over separations was necessary in the months of rising employment in order to effect not only the replacement of persons leaving WPA jobs but also the addition of other workers to the expanding program.

The relationship between accessions and separations that obtained in the July-October

<sup>A</sup> Data apply to continental United States, including only persons certified as in need of relief.

period was reversed during the eight months immediately following, a period characterized by severe reductions in the number of workers added to the program and large increases in the number leaving. Monthly accessions were cut to a half and even a third of their previous levels, except only in February when the downward trend of WPA employment was temporarily interrupted. Most of the accessions during these months represented reassignments of workers who had previously been employed by the WPA whereas in the preceding

period new assignments had predominated. Separations reached a peak of over 340,000 persons in April. Larger numbers of discharges and layoffs of workers (necessary in order to reduce WPA employment) were chiefly responsible for the increase in separations: such separations assumed predominant importance in each of the months when the largest reductions in employment were made. This was true even though the number of voluntary separations continued to exceed 100,000 during each month except February and to represent at least 3 percent of employment.

The relative stability of monthly reassignments in comparison with initial assignments and of monthly voluntary separations in comparison with discharges and lay-offs directs attention to certain persisting characteristics in the turnover taking place on WPA-financed projects. During the year reassignments of workers to project payrolls were made at the monthly rate of about 3.5 percent of total employment. The rate was comparatively constant in the different months of the year although it exceeded the year's average in the July-through-October period, when employment was expanding, and was somewhat below the average in the winter months. The presence of a degree of stability in the reassignment rates may be attributed to the fact that a considerable proportion of the persons reassigned

<sup>A</sup> Data apply to continental United States, including only persons certified as in need of relief. The rate represents percentage of employment at the beginning of the month.

were former WPA employees entitled to more or less automatic return to project work after termination of their temporary jobs in private industry. Such reassignments occur in considerable volume regardless of the trends in private employment.

The rate of voluntary separations was generally high throughout the year; it averaged in excess of 4 percent of the employment at the beginning of the month, fluctuating with seasonal conditions and changes in the business situation. The rate was lowest during the winter months and reached its high point of 5.5 percent in September 1938. The majority of the persons voluntarily separated left to take private jobs.

Greater stability has been evident in the employment of women working on WPA-financed projects than in the employment of men. Without exception during the year ending in June 1939 the monthly accession rates were lower for the women than for the men; women were added to the program at rates varying between 1.6 and 7.7 percent of total employment whereas for men the monthly accession rates ranged from 3.3 to 12.0 percent. In the case of separations the relationship was similar. Women left their project jobs at the rate of from 3.3 to 9.2 percent per month as compared with rates of from 6.3 to 12.6 percent for male workers. Apart from differences in degree, however, turnover rates in the employment of women and of men in the different months were similar.

## Hours Worked

WPA employees had worked 11,513,000,000 hours from the beginning of WPA operations in the summer of 1935 to the end of June 1939. During the last year of the four, project work totaled 3,748,000,000 man-hours—a figure 50 percent larger than the man-hour aggregate of the year immediately preceding (2,424,000,000). The man-hour data, like practically every other measure of WPA activities, reveal the predominance of work on highways, roads, and streets; two-fifths of the four-year total, or 4,621,000,000 hours, were worked on projects of this type. More than a billion hours were spent on each of four other kinds of under-

TABLE 35. HOURS AND EARNINGS OF PERSONS EMPLOYED ON WPA-OPERATED PROJECTS, BY MAJOR TYPES OF PROJECTS

takings—white collar, sewing, sewer system and other utility, and park and other recreational facility projects—and only a little less than a billion hours of labor were used in the construction and renovation of public buildings. The hours worked and the total earnings of persons employed on each of the major types of projects are shown in Table 35; state distributions of total hours and earnings appear in Table X of the appendix.

## Safety and Compensation

Comprehensive safety regulations applying to the operation of WPA projects and periodic safety inspections ensuring the effective application of the regulations have protected the health and safety of project workers and the general public. These measures have been instrumental in keeping the accidental injuries of workers on WPA projects at a minimum. In the course of 11½ billion man-hours of work since the beginning of the WPA program in 1935, disabling injuries have occurred at the rate of less than 19 per million man-hours of work. On construction work, as might be expected, the rate was somewhat higher—about 23 injuries per million hours. It should be noted, however, that such disabling injuries include all injuries (whether compensable or not)

which incapacitated the worker in the performance of his regularly assigned tasks on the next calendar day, even though he was able to do other jobs and was not absent from work.

The majority of the injuries that occurred in connection with WPA operations were caused by various hand tools or by the materials, such as lumber and brick, which workers handle on the job; these two groups of objects were responsible for over 55 percent of all disabling injuries reported during the year ending June 30, 1939. Falls from scaffolds or into pits and other harmful contacts with working surfaces were relatively frequent causes of injury. Among the remaining injuries vehicles and machines were most often the source. Explosives and inflammable materials were very seldom the cause of disabling injuries. (See Table 36.)

Fatalities have been relatively rare in the operation of WPA projects, amounting to only one for each 7,200,000 man-hours of work. This rate applies to the entire period of WPA operations and does not reflect the improvements that have been realized during the later years. During the first two years of operation, the fatality rate was one for each 6,200,000

<sup>^</sup> Includes trenches, quarries, pits and other excavations, scaffolds, and platforms.

hours worked; even this rate was only about half the original mortality estimate, based on former work project experience.

For workers injured or killed in the course of employment on WPA projects compensation is provided through the United States Employees' Compensation Commission to which funds have been made available under each of the Emergency Relief Appropriation Acts. Provisions for payment of compensation in the ERA Act of 1938 placed the maximum monthly payment at \$50 and set at \$4,000 the maximum aggregate payment in case of permanent disability or death. These limitations, which are exclusive of the cost of medical care, represent increases over the amounts specified under prior ERA Acts. Under the earlier acts monthly payments had been limited first to \$25 and subsequently to \$30 and the maximum amount set at \$3,500. Provisions under which the Compensation Commission operates require that monthly payments may not exceed two-thirds of the worker's monthly wage rate.

The United States Employees' Compensation Commission itself is charged with administering the compensation sections of the ERA Acts. However, in view of the very limited resources of project workers and the consequent need for speed in meeting the problems that arise from accidental injuries on a program of the size conducted by the WPA, the Commission authorized the WPA to pay installments of compensation locally for periods up to 30 days of disability. Benefits are paid for traumatic injuries which result in more than three days of disability. The compensation becomes payable

SHORING PROTECTS WPA WORKERS IN DEEP EXCAVATIONS

after the waiting period of three days following an accidental injury. After 30 days the case is taken over by the Compensation Commission.

Provision is made by the WPA for the recovery of wages lost during the period of disability. An injured worker is not separated from the project on which he is employed until 30 days after the injury and he is permitted to make up time, subsequent to his recovery, to a maximum of half his monthly assigned hours. If the worker's disability exceeds 30 days another qualified member of his family is given preference in assignment to project work until the injured worker himself is able to return to his job.

From the beginning of the WPA program in 1935 through June 30, 1939, WPA compensation officers to whom authority had been delegated by the Commission received reports of 173,826 cases of injury on which time had been lost and which might involve payments of compensation for one day or more. Some 685,000 additional cases not involving compensation but likely to require medical or hospital care were reported during the same period. Compensation was allowed in connection with 1,630 cases of fatal injuries including those that occurred while the worker was going to or from the WPA project; 181 additional fatalities were under consideration by the Commission at the end of the fiscal year.

The sum of \$3,500,000 was appropriated directly for the United States Employees' Compensation Commission by the Emergency Relief Appropriation Act of 1938 and an additional \$2,000,000 provided in Public Resolution No. 7, 76th Congress, approved April 1, 1939. These amounts together with \$33,925,000 allocated from earlier ERA Acts, made a total of \$39,425,000 available for the Commission to meet obligations arising from accidental injuries to project workers. From the funds appropriated, payments amounting to approximately \$19,786,000 had been made as of June 30, 1939. The total includes compensation for all workers injured or killed on projects financed under the ERA Acts of 1935 through 1938, the largest share of whom were WPA workers. A major proportion of the total payments (60 percent) covered medical, hospital, and incidental costs. Thirty percent of the com-

pensation was paid because of disability lasting more than 30 days, permanent disability, or death from injuries. The remaining 10 percent represents compensation paid locally by WPA compensation officers for 30 days or less of disability.

## Characteristics of WPA Workers

The men and women employed on WPA projects include single persons and heads of families, individuals of all ages from 18 years upwards, members of different races, and workers with practically every kind of occupational and educational background. The particular characteristics of the unemployed persons who work on WPA projects have definite bearing upon their employment opportunities in private industry. They also are an important element in determining the nature of the work project program conducted by the WPA. The following paragraphs describe briefly some of the outstanding characteristics of the persons employed on WPA projects.<sup>2</sup>

The typical WPA worker in February 1939 was a little more than 39 years of age; women workers were about a year and a half older than men. Thirty-nine percent of the workers were under 35 years of age, 45 percent were at least 35 but under 55, and the remaining 16 percent were 55 years of age or older. There were larger proportions of men than of women in each of the five-year age groups of younger and older persons, i. e., persons who were under 35 or at least 60 years of age; women were relatively more numerous in the age range from 35 to 59 years.

Considerable change had occurred between November 1937 and February 1939 in the age

<sup>2</sup> The data in the sections concerning age, family composition, duration of WPA employment, and other characteristics of WPA workers relate to WPA employees in the continental United States who were certified as in need of relief. This information was secured through the general review of the need status of certified relief workers which was required by Public Resolution No. 1 of the 76th Congress, approved February 4, 1939. The data cover the 2,732,251 persons whose names appeared on February payrolls and who were certified in the review for continued employment. Workers whose certifications were canceled as a result of the review, workers assigned too late in the month to be included on February payrolls, and nonrelief personnel are excluded. Unless otherwise stated, this review is the source of the information presented in the sections summarizing the characteristics of WPA workers and the duration of their employment. State distributions of WPA workers by age groups, size of family, and duration of employment are shown in Table V of the appendix.

| 60-64             | 6.6                        | 7.0   | 4.7   | 5.8                        | 5.9   | 5.3   |
| 65 and over       | 2.9                        | 3.2   | 1.3   | 1.6                        | 1.7   | 1.2   |
| Median age        | 42.4                       | 42.9  | 40.1  | 39.4                       | 39.2  | 40.7  |

<sup>A</sup> Data are from a special survey of the employment histories of WPA workers which made use of the special check cards filled out for each WPA worker at the time of the Census of Partial Employment, Unemployment, and Occupations.

<sup>B</sup> For workers included, see footnote 2 on page 101.

distribution of project workers, a result in part of the much larger WPA employment total that applied to the later period and reflected the increased unemployment of the time. Relatively more workers in February 1939 than in November 1937 were in each of the age groups under 35 years, and the median age of all workers was lower by about three years. This indicates that many of the workers who were added to the WPA program during the period of expansion were appreciably younger than the typical worker in November 1937. The decline in average age, however, was true only of the men. Women workers averaged a half year older in February 1939 than at the earlier date. It should be noted in connection with the changes in median ages that the number of men em-

ployed on WPA projects doubled during the period whereas the number of women increased only about 40 percent.

WPA project workers are only slightly older, in general, than all gainful workers.<sup>3</sup> Of the gainful workers 25 years of age or older in 1930, 47 percent were between 25 and 39 years of age whereas only 44 percent of the WPA employees as of February 1939 were in this age range; a larger proportion of the gainful workers than of the WPA workers were in each of the five-year age groups under 40. In each of the age groups from 40 to 65 years, however, WPA workers were proportionally more numerous, as may be seen in Table 38. In the case of workers 65 years of age or more there were relatively fewer WPA workers—a relationship reflecting the effect on the WPA of the social security programs for old-age assistance.

In the average WPA family in February 1939 there were nearly four (3.76) members. Approximately 60 percent of the workers were supporting two, three, or four persons, including themselves, and 30 percent had to provide for

five or more persons. (See Table 39.) Single persons employed by the WPA, numbering 292,000, accounted for nearly 11 percent of all

Based on a comparison with all gainful workers 25 years of age or older as shown in the 1930 Census of Population. There is reason to believe that changes in the age distribution of all workers have not been sufficiently great to preclude the general validity of the comparison; the comparison is limited to workers 25 years of age or older because of the fact that WPA employment is provided only to the principal worker in each family. Younger persons are typically aided through the CCC and NYA programs.

TABLE 38. PERCENTAGE DISTRIBUTION OF GAINFUL WORKERS IN APRIL 1930 AND OF WPA WORKERS IN FEBRUARY 1939, BY AGE GROUPS <sup>A</sup>

<sup>C</sup> For workers included, see footnote 2 on page 101.

WPA workers. Families of the women on WPA pay rolls were smaller by one, on the average, than those of the men, and single-person families were relatively about twice as numerous among the women as among the men. Men with families of five or more members were proportionately twice as numerous as women with such families.

Families of WPA workers were slightly larger than families in the general population of the country as indicated by the 1930 Census. Two-person families constituted 25 percent of all families with two or more persons in 1930 as compared with 23 percent of the families of WPA workers.<sup>4</sup> (See Table 40.) More than

<sup>a</sup> One-person families omitted because of incomparabilities between the two sets of data.

<sup>b</sup> Source: Fifteenth Census of the United States, 1930, Population.

<sup>c</sup> For workers included, see footnote 2 on page 101.

24 percent of the WPA workers were from families of three persons whereas less than 23 percent of all families in 1930 were of this size.

Similarly, most family size groups of more than three persons were slightly more numerous, relatively, among WPA workers than among all families. Except for the smaller number of two-person families, however, the size of the families of WPA workers followed the distribution of the general population.

About 14 percent of the workers on WPA projects in February 1939 were Negroes. The percentage corresponded closely with the relative number of Negroes registering as unemployed at the time of the November 1937 unemployment census; it was somewhat larger,

DISTRIBUTION OF WPA WORKERS  
BY SIZE OF FAMILY\*

\* See footnote 2 in the text for coverage of data.

WPA 3368

however, than the number of Negroes among the total families (9 percent) reported in the 1930 Census of Population. This is evidence of the greater incidence of unemployment on Negroes than on white workers and shows an adjustment in the WPA program to that fact.

The differences in racial composition for all families as against unemployed registrants and

<sup>c</sup> Source: Census of Partial Employment, Unemployment, and Occupations.

<sup>d</sup> For workers included, see footnote 2 on page 101.

<sup>4</sup> The comparison excludes one-person families because of incomparabilities between definitions applying to the two sets of data.

WPA workers apply in general to the various regions into which the country may be divided. Negroes represented larger percentages of the 1937 unemployed registrants than of total families in 1930 in all sections of the country; except for the South, the proportions of Negroes were strikingly larger among unemployed registrants than among the general population. (See Table 41.) Negro workers on the WPA were moderately more numerous than were the Negroes registering as unemployed, except in the South where a reverse relationship held.

In the course of operating the WPA program special interest has, on occasion, been attached to two groups of employees: persons presumably eligible for aid under social security programs and veterans. Most of the WPA workers 65 years of age or older normally would be eligible for old-age assistance; WPA workers of this age numbered about 44,000 in February 1939. Similarly, some 91,000 families of WPA workers were presumably eligible, on the basis of family composition, for aid to dependent children. More than a third of these families, however, were in six states in which programs for aid to dependent children were not in operation. Veterans are a group eligible for preference in assignment to WPA jobs under the provisions of recent ERA Acts. Among the workers certified for continued WPA employment in February 1939 were about 247,000 persons who reported themselves as veterans. These persons, of whom almost 14 percent were single as compared with 11 percent of all WPA workers, represented about 9 percent of the total WPA employment at the time.

### Duration of Employment of WPA Workers

The workers who in February 1939 were continued on WPA projects after investigation of need had been continuously employed at WPA work for an average period of a little more than one year (the median number of months is 12.4).<sup>5</sup> Most of the workers had been added to the program subsequent to the autumn of 1937 following the abrupt recession

in business activity which began at that time. Of the persons working on WPA projects in February 1939 nearly 20 percent had had continuous WPA employment for less than six months, 28 percent from six months to one year, and 22 percent from one year to a year and a half. Together these groups account for 70 percent of the total and represent the workers whose employment began after August 1937. The remaining 30 percent of the workers, as of February 1939, had been continuously employed at WPA work for longer periods—13 percent from one and a half to three years and 17 percent for three years or more.

TABLE 12.—DISTRIBUTION OF WPA WORKERS, BY DURATION OF EMPLOYMENT AND BY SEX <sup>A</sup>

| Months of Continuous Employment | Total     |          | Men   | Women |
|---------------------------------|-----------|----------|-------|-------|

| 30-35 .....                     | 86,174    | 3.2      | 2.9   | 5.0   |
| 36 or more .....                | 460,602   | 16.9     | 16.3  | 20.6  |
| Median number of months .....   |           | 12.4     | 12.2  | 14.6  |

<sup>A</sup> For workers included, see footnote 2 on page 101.

<sup>B</sup> Includes 116 workers for whom duration of employment was not reported.

As shown in Table 42, the number of workers with 18-23 months of continuous employment was comparatively small (4.4 percent) and similar small percentages apply to the 24-29 month and the 30-35 month intervals. These intervals cover persons whose WPA employment began between March 1936 and August 1937. Much larger proportions of WPA workers are found in the 6-11 and 12-17 month intervals, covering persons whose employment began between September 1937 and August 1938. Workers with 6-11 months of continuous employment, for example, accounted for more than 28 percent of the February 1939 employment total; these were workers that had been assigned to WPA projects between March and August 1938.

The primary reason for the great variation in the number of workers in the different dura-

<sup>5</sup> Duration of continuous employment is measured by the number of consecutive calendar months including and immediately preceding February 1939 that a worker's name appeared on payrolls of any WPA-operated projects; employment on projects operated by other Federal agencies is not included.

tion intervals is to be found in the trends in WPA employment since the program was initiated. For example, from February 1936 until the fall of 1937 the general trend of employment was downward. During this period relatively fewer persons were being added to WPA projects than in the previous and succeeding months when WPA employment was increasing.

The particular distribution of the continuously employed as of February 1939, with respect to the length of their employment, was fundamentally influenced by the changes that had taken place in total WPA employment. The influence of other factors, such as may be seen in groupings of the WPA workers by sex, age, place of work, size of family, and type of project were subordinate to the effect of the employment trend.

Women workers had averaged considerably longer continuous employment on WPA projects as of February 1939 than men (14.6 as compared with 12.2 months). About 40 percent of the women and less than 30 percent of the men had held a WPA job for 18 months or longer. (See Table 42.) The relatively larger number of men in each of the duration intervals under 18 months reflects the fact that in the expansion of WPA employment after 1937 the proportional increases were greater for men than women. Actually, the net gains in WPA employment between November 1937 and February 1939 were 94 percent in the case

WOMEN REPRESENT ONE OUT OF EVERY SEVEN WPA WORKERS

of men and 37 percent in the case of women.

Age differentials were important in the continuity of employment of WPA workers. The median length of the employment period increased consistently with each five-year age group, from less than 10 months for workers under 25 years of age to at least 15 months for workers of 55 or more. (See Table 43.) Barely 15 percent of the workers under 25 years of age had had WPA employment for 18 months or more although over 40 percent of the workers in the age groups of 55 or above

TABLE 43. DISTRIBUTION OF WPA WORKERS, BY AGE GROUPS AND BY DURATION OF EMPLOYMENT<sup>A</sup>

FEBRUARY 1939

| Age Group (Years) | Number of Workers      | Percent of Workers Continuously Employed For |                  |                 |                  |                |                | Median Number of Months of Continuous Employment |
|-------------------|------------------------|----------------------------------------------|------------------|-----------------|------------------|----------------|----------------|--------------------------------------------------|

<sup>A</sup> For workers included see footnote 2 on page 101.

<sup>B</sup> Includes 116 workers for whom duration of employment was not reported and 10,934 for whom age was not reported.

had been employed at least that long. Between these two extremes the percentages of workers with 18 or more months of employment show consistent increases with age. This indicates that there probably were relatively numerous additions of younger workers to the program in the year and a quarter between November 1937 and February 1939. Comparison with information as of the earlier date shows that the number of workers who were under 40 years of age increased 124 percent during this period whereas the net increase in workers 40 years of age or older amounted to only 64 percent.

The local employment situation is an important factor affecting the continuity of WPA employment. Stranded communities and distressed areas present extreme examples of conditions under which workers might be expected, because of the lack of private employment opportunities, to remain on the WPA program for long periods. In lesser degrees the same tendency is likely to be found in most industrial communities where workers depend almost exclusively on their payroll earnings. The extent of the changes in employment opportunities in different areas should also be considered since the areas in which no marked expansion or curtailment of private employment occurred are likely to be the ones characterized by longer continuity of WPA employment. In rural areas where large seasonal

movements in employment opportunities are characteristic, a shorter average duration of WPA employment is typical.

Influences of this sort are reflected in the duration data for different population groupings. The shortest average period of employment (11 months) was found in rural counties having in 1930 no municipality with as many as 5,000 inhabitants. (See Table 44.) Average duration of employment increased somewhat with the size of municipalities, averaging slightly less than 12 months for counties having municipalities with from 5,000 to 25,000 and from 25,000 to 50,000 inhabitants, and about 13 months for counties with cities in the 50,000 to 100,000 group. For the most populous areas having cities of 100,000 or more persons the duration of WPA employment averaged 13½ months (13 months if New York City is excluded). Similar relationships appear in the proportions of workers found in the several groupings according to length of continuous employment. The proportion of workers employed for three years or more, for example, increased with the population concentration of the area, averaging about twice as large in the most highly urban areas as in the rural counties (22 as compared with less than 11 percent).

The size of the worker's family did not have much apparent effect on the duration of his WPA employment. The median period per worker increased, though very gradually, from

<sup>A</sup> For workers included see footnote 2 on page 101.

<sup>B</sup> Urbanization groupings are based upon a classification of counties according to the 1930 population of the largest municipality in each county.

<sup>C</sup> Includes 116 workers for whom duration of employment was not reported and 10 for whom size of community was not reported.

TABLE 45. DISTRIBUTION OF WPA WORKERS, BY TYPES OF PROJECTS AND BY DURATION OF EMPLOYMENT<sup>A</sup>  
FEBRUARY 1939

| Type of Project                                      | Number of Workers | Percent of Workers Continuously Employed For |                  |                 |                  |                |                | Median Number of Months of Continuous Employment |
|------------------------------------------------------|-------------------|----------------------------------------------|------------------|-----------------|------------------|----------------|----------------|--------------------------------------------------|
|                                                      |                   | 3 years or more                              | 2½ years or more | 2 years or more | 1½ years or more | 1 year or more | ½ year or more |                                                  |
| Total                                                | 2,732,251         | 16.9                                         | 20.1             | 25.6            | 30.0             | 51.6           | 80.1           | 12.4                                             |
| Construction                                         | 2,232,745         | 15.8                                         | 18.6             | 23.6            | 27.6             | 50.1           | 79.2           | 12.0                                             |
| Highways, roads, and streets                         | 1,218,249         | 14.5                                         | 17.2             | 22.2            | 26.0             | 49.2           | 78.5           | 11.6                                             |

| Education                                            | 39,116            | 30.6                                         | 38.6             | 46.3            | 51.8             | 66.6           | 88.4           | 20.0                                             |
| Recreation                                           | 37,860            | 25.6                                         | 30.8             | 38.7            | 45.1             | 63.1           | 89.0           | 16.4                                             |
| Professional and service (excl. Federal Nation-wide) | 209,067           | 18.6                                         | 22.8             | 29.8            | 35.5             | 54.1           | 81.9           | 13.3                                             |
| Federal Nation-wide                                  | 28,698            | 33.1                                         | 38.7             | 48.4            | 55.4             | 65.7           | 87.2           | 22.7                                             |
| Sewing                                               | 183,873           | 20.7                                         | 25.9             | 33.9            | 39.6             | 58.5           | 83.8           | 14.7                                             |

<sup>A</sup> For workers included, see footnote 2 on page 101.<sup>B</sup> Includes 116 workers for whom duration of employment was not reported and 892 for whom type of project employment was not reported.

under 12 months for single workers to slightly more than 13 months for workers with families of eight or more persons. Similarly, the proportion of workers who had been continuously employed for 18 months or longer rose from 28 percent for single persons to 32 percent for persons from the largest families (eight or more persons). The continuity of a worker's employment showed even smaller variation as between races since the average period was barely a third of a month longer for negro than for white workers, 12.7 as compared with 12.4 months.

The duration of WPA employment averaged about two and a half months longer for workers on nonconstruction projects than for persons engaged in the various types of construction work; for the former the average was 14½ months and for the latter, 12 months. (See Table 45.) This difference may be attributed in part to the fact that the net increase in employment during the expansion period from November 1937 to February 1939 was considerably greater for construction than for nonconstruction projects. Such variation as was present among the individual types of construc-

tion projects is of limited significance because the data take no account of the numerous shifts of workers from one type of project to another. Transfers are less likely to be made between construction and nonconstruction projects or among the various types of nonconstruction activities and probably, therefore, do not qualify too severely the duration data for different major types of projects in the nonconstruction field. The duration of WPA employment was longest (almost 23 months) for workers on the Federally sponsored Nation-wide projects; these projects, however, which accounted for only a small fraction of the total employment, did not experience the large increase that characterized total employment during the period between the autumn of 1937 and February 1939. Workers on education and on recreation projects also were employed continuously for a longer average period than were all WPA employees, the medians for these groups being 20 and 16 months, respectively. For all white collar workers the average continuous employment interval was less than 15 months. A similar interval applies to persons employed on sewing projects.

# FINANCIAL SUMMARY

## Appropriations

Funds for continuing the WPA program through the year ending June 30, 1939, were appropriated in Title I of the Work Relief and Public Works Appropriation Act of 1938, a title cited as the Emergency Relief Appropriation Act of 1938, and in two subsequent joint resolutions. The 1938 Act, approved June 21, 1938, differed from earlier ERA Acts in that it made direct appropriations to the WPA and the other agencies administering the work relief and relief programs whereas in the prior acts the appropriations were made for specified types of activity; the funds to be allocated to individual agencies at the direction of the President. Since the 1938 Act provided that WPA appropriations should be apportioned to cover the first eight months of the fiscal year, a period that might be reduced by the President to seven months if conditions made the action necessary, additional funds were required to finance the WPA program throughout the remainder of the year. Such funds were provided in two supplemental appropriations, the first approved on February 4, 1939, and the second on April 13, 1939.

Net appropriations to the WPA under the 1938 Act and its supplements amounted to \$2,254,000,000. (See Table 46.) The ERA Act of 1938 itself appropriated \$1,425,000,000 together with balances of 1937 Act funds amounting to \$31,400,000; \$725,000,000 was made available through the first additional appropriation (Public Resolution No. 1, 76th Congress) and \$100,000,000 through the second (Public Resolution No. 10, 76th Congress).

TABLE 46. SOURCE OF FUNDS AVAILABLE TO THE WPA UNDER THE ERA ACT OF 1938

AS OF JUNE 30, 1939

|                                                                |                 |                 |
|----------------------------------------------------------------|-----------------|-----------------|
| Specific Appropriations:                                       |                 |                 |
| ERA Act of 1938 (Public Resolution No. 122, 75th Congress)     | \$1,425,000,000 |                 |
| Public Resolution No. 1, 76th Congress                         | 725,000,000     |                 |
| Public Resolution No. 10, 76th Congress                        | 100,000,000     | \$2,250,000,000 |
| Reappropriation of 1937 ERA Act Balances                       |                 | 31,399,671      |
| Total Funds Appropriated to the WPA                            |                 | \$2,281,399,671 |
| Transfer to Reimbur Appropriation of the Corps of Engineers    | 18,000,000      |                 |
| Transfers to Other Agencies for 1938 ERA Act Purposes          |                 |                 |
| Water conservation and utility projects                        | 5,000,000       |                 |
| Public Health Service                                          | 1,211,665       |                 |
| Puerto Rico Reconstruction Administration                      | 200,000         |                 |

| Net Funds Appropriated to the WPA                              |                 | 2,253,988,006   |
| Transfers to Federal Agencies under Section 3, ERA Act of 1938 |                 | 84,628,607      |
| Funds Available for Programs Operated by the WPA               |                 | 2,169,359,399   |
| Work projects                                                  |                 | 2,070,457,962   |
| Purchase of surplus clothing                                   |                 | 15,750,000      |
| Aid to self-help and cooperative associations                  |                 | 100,768         |
| Administrative expenses <sup>B</sup>                           |                 | 74,855,784      |
| Undistributed by programs                                      |                 | 8,185,885       |

<sup>A</sup> Does not include \$75,000,000 appropriated and \$732,000 reappropriated to the National Youth Administration.

<sup>B</sup> Includes administrative expenses of the NYA.

Source: U. S. Treasury Department report on the status of funds and analyses of expenditures under the ERA Acts of 1935, 1936, 1937, and 1938, as of June 30, 1939.

From the amounts appropriated to the WPA, \$18,000,000 was transferred to the Corps of Engineers by the War Department Civil Appropriation Act, fiscal year 1939. Other WPA funds aggregating \$9,412,000 were transferred for specific purposes in accordance with legislative provision<sup>1</sup>, leaving the total of \$2,254,000,000 available for WPA programs.

<sup>1</sup> Including \$1,212,000 to the Public Health Service for medical, surgical, and hospital services to injured emergency relief workers, and for furnishing technical supervision for community sanitation, malaria control

Through Section 3 of the ERA Act of 1938, as amended, the Administrator of the WPA was authorized to transfer an amount not to exceed \$88,000,000 to other Federal agencies for the operation of projects similar to those prosecuted by the WPA. Transfers made in accordance with this provision totaled \$84,629,000 as of June 30, 1939. Consequently, the net appropriations that were available during the fiscal year for programs operated directly by the WPA totaled \$2,469,359,000.

### Transfers of WPA Funds for Projects of Other Federal Agencies

The \$84,629,000 which the WPA transferred under authority of Section 3 of the ERA Act of 1938 and its supplements was distributed among 27 agencies for the prosecution of projects similar to those operated by the WPA. A sum of \$21,045,000, or one-fourth of the total, was transferred to the Quartermaster Corps of the War Department for the construction and improvement of buildings, facilities, and grounds at army forts, posts, and stations. For similar work at naval yards and stations, \$14,782,000 was transferred to the Bureau of Yards and Docks of the Navy Department.

The WPA allotted \$9,861,000 to the Soil Conservation Service chiefly for land drainage and erosion control work; \$8,805,000 to the National Park Service for developing public recreational areas and conducting studies and surveys in connection with the development and operation of national parks; \$7,655,000 to the Bureau of Entomology and Plant Quarantine for the prevention, control, and eradication of plant diseases and insect pests; and \$6,843,000 to the Forest Service for conservation work including the development of forest and range areas and the survey of matters pertinent to such work. These and the smaller allocations made to the other 21 agencies that operated projects with funds transferred by the

<sup>a</sup> Transfers of WPA funds provided for by other sections of the ERA Act of 1938 and by other congressional acts amounting to \$9,111,665.

<sup>b</sup> Including the Bureau of Internal Revenue.

Source: U. S. Treasury Department report on the status of funds and analyses of expenditures under the ERA Acts of 1935, 1936, 1937, and 1938, as of June 30, 1939.

WPA are shown in Table 47. Allocations for administrative expenses, incident to the operation of projects and limited to 5 percent of expenditures, are shown as departmental totals in cases when more than one agency in a department received transferred WPA funds.

### Appropriations to Other Agencies

The ERA Act of 1938 provided direct appropriations and reappropriations of balances of 1937 Act funds for the work relief and relief

drainage, and mine-sealing projects of the WPA (Second Deficiency Appropriation Act, fiscal year 1938 and Second Deficiency Appropriation Act, fiscal year 1939; \$3,000,000 to the Procurement Division of the Department of the Treasury for a work relief supply fund (ERA Act of 1938, Section 17); \$200,000 to the Puerto Rico Reconstruction Administration for relief for needy persons (ERA Act of 1938, Section 1); and \$5,000,000 for allocation by the President for water conservation projects (Second Deficiency Appropriation Act, fiscal year 1938).

programs of several Federal agencies in addition to the program of the WPA. To the Secretary of Agriculture, \$175,000,000 (plus \$23,-225,000 in balances) was appropriated for loans, relief, rural rehabilitation for needy persons, and administration. These funds have been used principally by the Farm Security Administration to which was allocated \$180,956,000. To the Puerto Rico Reconstruction Administration the 1938 Act made available \$6,000,000 (plus \$2,706,000 in balances) for loans, rural rehabilitation for needy persons, work projects, and administration. The PRRA also received \$200,000 of WPA funds transferred for relief purposes and an additional appropriation of \$1,000,000 in a subsequent act.<sup>2</sup>

For the student aid and work programs of the National Youth Administration \$75,000,000 was appropriated, together with balances of \$732,000 from 1937 ERA Act funds. Appropriations for administrative expenses incurred in connection with work relief and relief programs were made to the General Accounting Office, to five bureaus of the Treasury Department, and to the Commerce Department's Bureau of Air Commerce (later incorporated within the Civil Aeronautics Authority). Funds were also appropriated to the United States Employees' Compensation Commission,<sup>3</sup> the National Emergency Council, the National Resources Committee, the United States Employment Service in the Department of Labor, and the Department of Justice.

In net amount \$2,581,118,000 was available for operations conducted under the ERA Act of 1938. The act itself appropriated \$1,712,905,000; this sum plus reappropriated balances of \$58,063,000, additional appropriations to the WPA of \$825,000,000 and appropriations of \$3,150,000 provided in other acts,<sup>4</sup> result in a gross appropriated total of \$2,599,-118,000. Deduction of the \$18,000,000 transferred to the Corps of Engineers yields the net

total available under the ERA Act of 1938. The allocations, obligations, and annual expenditures through June 30, 1939, under all ERA Acts and under the 1938 Act alone are shown by agencies in Table VIII of the appendix.

## Federal Expenditures on WPA-Operated Programs<sup>5</sup>

Expenditures for WPA-operated programs during the period from the initiation of WPA activities in 1935 through June 30, 1939, aggregated \$6,657,860,000. The sum is comprised predominantly of money expended in the operation of work projects. It also includes funds used in meeting the administrative expenses of the WPA and the NYA, in purchasing surplus clothing for distribution among needy people, and in aiding self-help and cooperative associations.

Of the total expenditures incurred in the operation of WPA programs, \$2,154,225,000 was paid out during the year ending June 30, 1939. The last fiscal year was one in which WPA activities were carried on at a relatively high level as a result of the large amount of unemployment following the recession of late 1937. Expenditures during the previous year totaled \$1,427,374,000, or about one-third less than in the year ending in June 1939. During the first two years of WPA operations expenditures on WPA programs amounted to \$1,258,-130,000 and \$1,818,131,000, respectively. It should be remembered that WPA activities were fully under way during only part of the first year.

WPA funds have been used very largely for the operation of work projects, nearly all of which have been sponsored by state and local agencies. In the last fiscal year, as is true of the entire period of WPA operations, almost 96 percent of the Federal expenditures of the WPA were used on WPA project programs. All except 2.5 of the 96 percent on a cumulative basis and all except 1.9 in the last year was

<sup>2</sup> Second Deficiency Appropriation Act, fiscal year 1939.

<sup>3</sup> The \$3,500,000 appropriated by the ERA Act of 1938 to the United States Employees' Compensation Commission for administration and payment of disability or death compensation and benefits of workers employed on projects operated by the WPA and other Federal agencies financed with ERA Act funds was supplemented by \$2,000,000 provided in Public Resolution No. 7, 76th Congress.

<sup>4</sup> To the Puerto Rico Reconstruction Administration, \$1,000,000, as noted above; to the United States Employees' Compensation Commission, \$2,000,000, as noted above; and to the General Accounting Office, \$150,000, in Public Resolution No. 61, 76th Congress.

<sup>5</sup> Not included in the following sections discussing WPA-operated programs are the funds used in the operation of NYA student aid and work project programs, WPA funds transferred to other Federal agencies under Section 3 of the ERA Act of 1938, and WPA funds transferred under prior acts for land utilization and rural rehabilitation programs administered by the Farm Security Administration and for a reclamation project in Texas administered by the Bureau of Reclamation.

| 1936                      | 1,258,130,248                | 1,193,567,378   | 94.9         | 64,562,870                                | 5.1          |
| 1937                      | 1,818,130,502                | 1,751,286,222   | 96.3         | 66,844,280                                | 3.7          |
| 1938                      | 1,427,374,309                | 1,363,596,376   | 95.5         | 63,807,933                                | 4.5          |
| 1939                      | <sup>B</sup> 2,154,224,992   | 2,064,996,599   | 95.9         | 73,101,072                                | 3.4          |

<sup>A</sup> Does not include funds for NYA programs or WPA funds used on programs administered by other Federal agencies under the various ERA Acts.

<sup>B</sup> Includes \$15,827,320 expended for purchase of surplus clothing and in aid to self-help and cooperative associations in addition to work project and administrative expenditures.

Source: Based on reports of the U. S. Treasury Department.

expended in connection with state and local project programs. The smaller amount went to defray the costs of a Federal work project program initiated under the WPA<sup>6</sup> and often carried on with state and local cosponsorship. Administrative expenses comprised most of the remaining 4 percent of total WPA expenditures. In the year ending June 30, 1939, other activities of the WPA accounted for \$15,827,000 of the total expenses. The sum of \$15,725,000 was expended in purchasing surplus clothing for distribution to needy families and the remainder in assisting self-help cooperatives, as authorized by the ERA Act of 1938. Administrative expenditures are discussed in greater detail in a following section and a discussion of purchases of surplus clothing appears in another chapter. (See pages 118 to 120.)

Sponsors of WPA projects have supplied additional funds for the prosecution of project work. Their outlays amounted to \$1,302,837,000 in the period from the initiation of the WPA program through June 1939. During the last fiscal year sponsors' expenditures totaled \$493,039,000; this was the largest amount contributed by sponsors in any year since the beginning of the program. It exceeded the total for the previous fiscal year by \$117,801,000. Sponsors' funds represented 19 percent of total project costs during the year ending June 30, 1939, as compared with 17 percent over the entire period of WPA operations. A detailed

analysis of project expenditures with respect to types of projects, sources of funds, objects of expenditure, and other aspects of operations appears in the discussion of WPA projects, pages 28 to 34.

## Monthly Expenditures

Following the initiation of WPA operations in the summer of 1935 monthly expenditures from Federal funds increased until in March and April of 1936 a level of approximately \$180,000,000 per month was reached. During the ensuing eight months expenditures averaged somewhat below this amount and further reductions during the spring and summer of 1937 brought monthly expenditures to about \$96,000,000 in October and November 1937. When the rapid decline in private employment initiated an expansion in WPA project work that extended over the following 12 months, Federal outlays for the WPA program increased correspondingly and reached their highest level during the quarter ending December 31, 1938. In that quarter they amounted to almost \$200,000,000 per month. Curtailment of the WPA program in the spring of 1939 resulted in reduced expenditures which averaged about \$160,000,000 in April, May, and June. The monthly average for the fiscal year

TABLE 49. FEDERAL EXPENDITURES ON WPA-OPERATED PROGRAMS<sup>A</sup>

<sup>6</sup> The Federal WPA program in which the Federal arts projects predominated was discontinued, as such, by the ERA Act of 1939, for a review of pertinent provisions of the act, see page 9.

CHART 6

## FEDERAL EXPENDITURES ON WPA-OPERATED PROGRAMS\*

July 1935 - June 1939

ending June 30, 1939, was \$180,000,000 as compared with monthly averages of \$119,000,000 during the preceding year and \$152,000,000 in the year ending June 30, 1937.

The amounts expended in each month from the beginning of WPA operations in July 1935 through June 1939 are presented in Table 49 and shown graphically in Chart 6. Basically the amount of funds expended during any given month is determined by the number of project jobs provided. Actual payments made during a month, however, are influenced by the number of payroll periods ending within the month and other factors relating to account-

ing procedures. The real level of WPA expenditures in a given month, consequently, is better measured by an average figure such as the three-month moving average shown in Chart 6.

## Objects of Expenditure

Payments for services of employees accounted for \$90 out of each \$100 spent on all WPA-operated programs in the year ending June 30, 1939, and for \$88 out of each \$100 during the entire period of WPA operations. In the last fiscal year an aggregate of \$1,940,670,000 was paid out for wages and salaries. Most of this total (\$1,881,019,000) was used for wages of project workers. Their wage payments accounted for \$91 out of each \$100 of Federal funds that was spent on work projects during the last year and \$88 per hundred over the entire period of WPA operations.

The comparative sizes of the different expenditures made from Federal funds during the year ending June 30, 1939, are shown in Chart 7. Project payrolls account for 88 percent of the total Federal dollar. Of the remainder, 8.6 percent was used for other than labor costs incurred in connection with project activities and 3.4 percent for administrative

expenses. It should be noted that the project data relate only to WPA-operated projects and that the total Federal dollar does not include the relatively small expenditures for purchases of surplus clothing and aid to self-help and cooperative associations.

Federal expenditures for other than payroll purposes have been made predominantly in the purchase of supplies, materials, and equipment. Such outlays represented somewhat more than half of the nonlabor expenditures through June 1939 for all programs and for project operations alone. A similar relationship obtained in the last fiscal year although, because the total nonlabor proportion was lower in the last year, the supplies, materials, and equipment expenditures represented a smaller fraction of the total—\$6 out of each \$100 in the last year as compared with \$7 on a cumulative basis.

The principal share of the \$115,075,000 expended in the last fiscal year in purchasing supplies, materials, and equipment represented outlays for work projects. Included in the total, however, was \$2,469,000 expended for purchase of supplies, materials, and equipment in the administrative account and \$15,679,000 used in purchasing surplus clothing for distribution to needy families and in aiding self-help and cooperative associations. Most of the remaining nonlabor outlays were made in connection with rent of equipment (less than \$3 per \$100 in the last fiscal year and slightly in excess of \$4 out of each \$100 on a cumulative basis). Contractual services, about half of which were required in connection with administrative operations, amounted to about \$1 in each \$100; these included such items as heat, light, power, water, electricity, travel, transportation of things, and printing and binding.

### Administrative Expenses

The administrative expenses incurred in conducting the WPA and NYA programs through June 1939 totaled \$268,616,000, or 4.0 percent of the aggregate amount expended on all WPA-operated programs since July 1935. The \$73,401,000 expended for administrative purposes in the last fiscal year constituted 3.4 percent of total WPA expenditures for the year. The percentage for the last year is substantially

\* Federal funds only and exclusive of purchases of surplus clothing

WPA 3382

lower than the 5.1, 3.7, and 4.5 percent figures that apply to the years ending June 30, 1936, 1937, and 1938, respectively. Such year-to-year differences illustrate the fact that on a work program designed to meet employment needs in every part of the country the extent and cost of administrative operations do not vary directly with total expenditures.

Administrative expenditures increase or decrease with changes in the volume of project operations, but bear a changing percentage relationship to total expenditures. The year ending in June 1939, for example, was one of expanded operations and as a result administrative costs fell to only 3.4 percent of the total. This percentage stands in marked contrast with the percentage of 4.5 applying to the preceding year when total expenditures were about two-thirds as large as in the year ending June 30, 1939.

Most of the administrative expenditures (81 percent on a cumulative basis as well as during the last year) have been used in paying the salaries of the administrative staff. About 8

percent of the administrative outlays of the last fiscal year, however, went to defray the travel expenses of administrative employees, and 5 percent for various other contractual services. Such items as communication, printing and binding, transportation of things, and utility charges accounted for successively smaller amounts of the contractual service total. Purchases of supplies, materials, and equipment represented 3.4 percent of total administrative expenditures in the year ending June 30, 1939, and rent of buildings and equipment, the latter much the smaller of the two, represented 2.4 percent of the administrative outlays.

| Other                                          | 17,204       | (A)     |

A Less than 0.05 percent

Source: Based on reports of the U. S. Treasury Department.

At the close of the fiscal year in June 1939, the WPA had 31,497 regular administrative employees. This total represented a reduction of about 500 from the number at the close of the preceding year and of more than 4,200 from the largest number employed during the year. Comparison with the total project employment of the WPA shows that at the end of June 1939 there were 12.9 WPA administrative employees for each 1,000 WPA project workers—a ratio which had been above 20.0 in 1937 but reached a low point of 11.1 earlier in the last fiscal year when project employment was at its peak. Most of the 31,497 persons on WPA administrative payrolls in June 1939 (29,416) were employed in the state and local offices of the WPA; the 1,759 employees of the central office

staff in Washington and the 322 regional offices and other field employees accounted for the remaining 2,081 administrative employees.

The average salary of administrative employees at the end of December 1938 amounted to \$1,581 on an annual basis and \$132 on a monthly basis. The averages apply to administrative workers of the WPA throughout the country, including state and local office employees as well as those of the Washington central office and the regional office and field staffs. Only 22 percent of the administrative workers were paid at the rate of \$2,000 or more per year. In reporting on all administrative employees on Federal payrolls as of December 31, 1937, the United States Civil Service Commission estimated that the average annual salary of all Federal administrative employees was \$1,871.<sup>7</sup> The WPA average at the end of December 1938 was \$290 below the earlier figure for all Federal staffs.

## Man-Month Costs

The cost to the Federal Government of employing one man at WPA project work for one month has averaged \$62.00 throughout the period of WPA operations from the summer of 1935 to June 30, 1939. Of this amount \$52.50 has been paid out to the worker himself, \$7.00 has been used for nonlabor expenses arising in connection with project work, and \$2.50 has been expended for administration. Sponsors of WPA projects supplied additional funds to the extent of approximately \$12.25 per man-month of employment of project workers paid from Federal funds. The largest portion of the sponsors' outlays (\$10.00) was provided for supplies, materials, equipment, and other nonlabor costs of operating WPA projects. Sponsors, however, did incur labor expenses of \$2.25 per man-month of project work of employees paid by the Federal Government. This represented wage payments to machine operators, operators of trucks and other kinds of equipment, skilled craftsmen, supervisors, and other kinds of specially qualified personnel made available by sponsors for the successful operation of projects. The Federal and sponsors'

<sup>7</sup> United States Civil Service Commission release dated April 2, 1939.

man-month total for the entire period of WPA operations amounted to \$74.25.

Although Federal man-month costs were lower by \$1.00 in the year ending June 30, 1939, sponsors' funds increased sufficiently to raise the monthly figure to \$75.25 which was \$1.00 above the four-year average. The \$61.00 share borne by the Federal Government in the last fiscal year involved smaller nonlabor and

administrative outlays per project employee than were incurred over the entire period and slightly larger average payments to project workers. Nonlabor expenditures of sponsors were about \$2.00 higher on a man-month basis so that the total contributions of sponsors amounted to approximately \$14.25 per man-month of Federal employment during the last fiscal year.

# MATERIALS, SUPPLIES, AND EQUIPMENT

**C**EMENT, lumber, structural steel, bituminous mixtures, machinery, petroleum products, and many other kinds of materials, supplies, and equipment have been procured in large quantities for use in the prosecution of WPA projects. The value of all such materials, through June 30, 1939, amounted to almost \$1,038,000,000 of which the sponsors of WPA projects had provided about 58 percent or some \$600,000,000. In addition to the purchases made in connection with project work substantial quantities of surplus clothing were purchased by the WPA for distribution to needy persons; expenditures for this purpose, financed from funds made available by the ERA Act of 1938, amounted to about \$15,680,000.

## Materials for WPA-Operated Projects

The materials, supplies, and equipment required for WPA project work were procured from many different branches of industry. Stone, clay, and glass products constituted more than a third of the total value, amounting to about \$362,000,000 in the course of the four-year period ending June 30, 1939. Of this figure about \$94,000,000 was for cement, \$71,000,000 for sand and gravel, \$62,000,000 for crushed stone, \$51,000,000 for concrete products, and \$47,000,000 for brick, tile, and other clay products.

Roughly a fifth of the total material outlays were for iron and steel products, among which cast-iron pipe and reinforcing steel were outstanding. Of the \$188,000,000 spent on this

kind of material over \$54,000,000 went for cast-iron pipe and fittings, and \$47,000,000 for structural and reinforcing steel. Over \$17,000,000 was used in buying tools (other than machine tools), and almost \$10,000,000 for heating and ventilating equipment.

Producers of lumber, bituminous mixtures, and textiles were other industrial groups which received large orders for materials; together they accounted for a fourth of the total value of materials for project use. The value of lumber and lumber products (not including furniture) that were procured during the four-year period of WPA activities amounted to almost \$108,000,000. The bituminous mixtures used in paving roads, streets, and airport runways, and in other work amounted in value to nearly \$90,000,000. About \$69,000,000 worth of textiles were purchased for use in sewing rooms; this was the outstanding outlay for nonconstruction materials.

Since heavy machinery and other equipment essential to project operation were usually secured on a rental basis, purchases of all kinds of equipment amounted to about \$44,000,000 during the four-year period ending June 30, 1939. The largest share of the equipment purchases were made in connection with electrical machinery and apparatus, generally for installation in constructed facilities; sizeable quantities of paving equipment and other road-building machinery were also procured. In addition, over \$6,000,000 was spent for motor trucks and tractors. The purchases of machinery and equipment including trucks and tractors, however, were less than 10 percent of

Source: WPA state office reports.

the amounts used for rentals of equipment. Large amounts of chemicals and allied products—explosives, paints, and varnishes—as well as of petroleum products, plumbing equipment and supplies, and office equipment including furniture also were obtained for use on WPA projects. (See Table 52.)

The amounts of materials, supplies, and equipment required for WPA project operations were larger during the year ending June 30, 1939, than during the preceding years, in keeping with the higher levels of project activities that prevailed. The value of ma-

terials procured with both Federal and sponsors' funds amounted to almost \$343,000,000, or approximately \$95,000,000 more than the corresponding figure for the preceding year. The 1939 total may also be compared with a total of some \$147,000,000 spent for materials in the two years ending June 30, 1937; these two years, however, include the last half of 1935 when the program was being put into operation.

A considerable part of the increase as between the year ending June 30, 1938, and the year ending June 30, 1939, was due to the larger amounts of lumber, cement, concrete

REINFORCED CONCRETE CONSTRUCTION ACCOUNTS FOR SOME OF THE QUANTITIES OF MATERIALS USED ON WPA PROJECTS

products, and miscellaneous iron and steel products required for the expanded program. Some \$33,000,000 worth of lumber was secured during the year ending in June 1939, essential supplies of cement and concrete products amounted to \$32,000,000 and \$18,000,000, respectively, and the value of miscellaneous iron and steel products totaled over \$23,000,000. Each of these amounts represents an increase of from \$7,000,000 to \$10,000,000 over the corresponding figure for the preceding year. Considerably more brick, tile, and other clay products, sand and gravel, crushed stone, and machinery and equipment of all kinds also were required for project operation during the 1939 fiscal year than during 1938; the increases in the value of each of these kinds of materials amounted to between \$4,000,000 and \$6,000,000. Since larger outlays were made for almost every kind of material and equipment, the relative importance of the different types varied in only a limited degree.

Sponsors of WPA projects have provided an increasingly larger part of the materials, supplies, and equipment used in the operation of WPA projects. During the year ending

June 30, 1939, their contributions amounted to almost \$228,000,000 as compared with \$173,000,000 in the previous year and less than \$200,000,000 in the first two years of operations. Sponsors' outlays for materials, supplies, and equipment constituted approximately two-thirds of the total during each of the last two years and about 58 percent of the total on a cumulative basis.

Lumber, bituminous mixtures, and sand and gravel were made available in particularly large quantities by project sponsors during the year ending June 30, 1939. Sponsors provided about \$26,000,000 worth of lumber, \$20,000,000 worth of bituminous mixtures for paving and other purposes, and over \$18,000,000 worth of sand and gravel. They also supplied substantial amounts of clay products, cement, concrete products, crushed stone, cast-iron pipe and fittings, structural and reinforcing steel, and textiles. The values of each of these contributions ranged from \$9,000,000 to over \$15,000,000. On a comparative basis sponsors' funds were large (in excess of 75 percent of the total) in the case of cast-iron pipe and fittings, heating and ventilating equipment, lumber, electrical machinery, paints and varnishes, and plumbing equipment and supplies.

### Surplus Clothing Purchases

The WPA surplus clothing purchase program was designed to provide people in need with clothing they would not otherwise be able to secure and at the same time to stimulate private employment by removing from the market a clothing surplus that was seriously retarding recovery in one of the Nation's large industries.

The surplus clothing purchase program was financed with 1938 ERA Act funds under the authority given to the WPA Administrator to use an amount not to exceed \$25,000,000 for direct relief purposes, under the direction of the President. A total of \$15,750,000 was made available by means of three Presidential authorizations. The first (on June 21, 1938) authorized purchase of men's and boys' heavy clothing; the second (July 16), women's and children's heavy clothing; and the third (October 8), miscellaneous clothing which consisted mostly of lighter wear.

Purchases were made by officials of the Procurement Division of the Treasury Department aided by members of the WPA administrative staff and by expert buyers loaned to the Government by private business organizations on a dollar-a-year basis. Manufacturers were asked to submit offers and samples of surplus clothing to the committees of professional buyers. To make sure that purchases would be made from surplus stocks, specifications required that garments must have been manufactured within the past two years and in stock on May 1, 1938, or, for some of the later purchases, in stock on July 1, 1938. Manufacturers whose offers were

accepted were instructed to ship garments to central warehouses located in New York and Chicago.

The 6,443,000 garments procured were valued at \$15,681,000 and cost, on the average, \$2.43 per garment. Purchases were made from 1,338 firms located in 32 states. The state distribution of purchases, as might be expected, reflects the location of the clothing manufacturers of the country. Goods purchases from 746 firms in New York State accounted for more than half of total expenditures, and purchases from 134 firms in Pennsylvania and from 135 firms in Massachusetts each aggregated well over a million dollars.

The first purchases consisted chiefly of heavy woolen outerwear for men and boys. Over \$3,600,000 was spent for 371,000 men's suits and \$533,000 for 113,000 boys' suits. The former averaged \$9.83 in cost and the latter, \$4.72. About 239,000 men's overcoats and 68,000 boys' overcoats were purchased at an average cost of \$9.16 and \$5.88, respectively. The 181,000 men's and 11,000 boys' topcoats purchased were valued at \$8.53 and \$4.07 each. Mackinaws, cossack jackets, and other coats for men and boys as well as knitted outerwear were also bought.

Among the purchases of women's clothing were 276,000 blouses which cost 82 cents each on an average. Some 152,000 women's coats and 61,000 girls' and infants' coats were purchased at averages of \$4.59 and \$3.21, respectively, and 102,000 women's suits at an average cost of \$4.55. The 67,000 women's dresses and

TABLE 53. NUMBER AND COST OF SURPLUS GARMENTS PURCHASED BY THE WPA, BY TYPES OF GARMENTS

AS OF JUNE 30, 1939

\* Total shipments are slightly higher than total purchases as shown in Table 53 because of the failure of vendors, in some instances, to bill for sample garments.

the 429,000 children's dresses that were bought averaged \$1.76 and 54 cents, respectively, per garment.

The number of knitted outerwear articles bought for men, women, and children, represented 40 percent of the garments procured although in terms of value they represented

only 11 percent of the total. The average price of such clothing ranged from 44 cents for boys' sweaters to 92 cents for men's knitted wear. Table 53 summarizes purchases by types of garments, and shows the value, number of units, and average price.

In allocating garments among the states for distribution consideration was given to a number of factors; these included population in 1930, numbers of persons receiving general relief, recipients of categorical assistance, and WPA workers, and the total estimated number of persons in need. Consideration of climatic conditions was important in allocating the specific items of clothing to the various sections of the country. Table 54 shows the number of men's, boys', women's, and girls' and infants' garments shipped to each state.

The selection of persons to receive garments was made by public welfare and relief agencies designated by the WPA state divisions of employment, by the WPA, or jointly by the WPA and the public welfare agency. Selection was made on the basis of need after investigations proved that the recipients were unable to provide the articles of clothing for themselves. The recipients included unemployed persons who were certified and awaiting assignment to WPA projects, WPA workers, families and single persons receiving general relief, recipients of social security aid, and families with NYA workers. Persons obtaining no assistance yet unable to secure clothing through normal channels were also eligible to receive surplus garments. Varying circumstances in the several states resulted in different emphasis in the distribution of surplus clothing among the types of eligible persons.

Distribution was under way by the middle of November and proceeded rapidly during December 1938 and the first two months of 1939 in an effort to supply the heavy outerwear in time for use during the winter months. Miscellaneous garments, generally of lighter weight, were distributed in March. By the last of April only a very small fraction of the garments procured under the surplus clothing purchase program were still in the local distribution centers.

# WPA-FINANCED OPERATIONS OF FEDERAL AGENCIES

THE WORKS PROGRESS ADMINISTRATOR was authorized under authority of Section 3 of the ERA Act of 1938 to allocate WPA funds to other Federal agencies for the prosecution of projects similar to those which the WPA could operate. These projects, similar in type to regular WPA-operated projects, have been carried on in accord with the general regulations that were established for WPA projects. In total, the WPA transferred \$84,629,000 from the funds made available by the ERA Act of 1938 and the two supplementary appropriations; this amount, as of June 30, 1939, includes a little less than \$4,000,000 allocated to the various agencies for administrative expenses incurred in connection with project operations. The work undertaken with WPA funds by the Federal agencies which received allocations is summarized briefly below. The discussion excludes activities conducted with appropriations specifically provided for the Federal agencies in the ERA Act of 1938 and with other appropriations made directly to them. Tables 47 and 27 on pages 109 and 92 show, respectively, the transfers of WPA funds, by agencies, and the employment provided on the WPA-financed Federal agency projects.

## Department of Agriculture

### Soil Conservation Service

Almost \$10,000,000 was transferred by the WPA to the Soil Conservation Service for proj-

ects which have provided work for between 13,000 and 19,000 persons during the year ending June 30, 1939. The projects fall into two major categories: those which further the agency's regular soil conservation program and those which relate to its land utilization program. With the WPA funds made available for furthering the regular program of the Service, data on floods, siltation of reservoirs, climatics, and erosion have been collected which the Service could not have hoped to obtain in the immediate future with its regular appropriations and personnel. In addition, practically all of the Service's field activities requiring employment of labor have been assisted through projects operated in almost all the states outside the New England group.

In connection with its land utilization program the Soil Conservation Service has been using WPA funds on projects to develop for their most appropriate uses: forestry, grazing, conservation, and recreation: the lands purchased under earlier legislative provisions. (This program largely comprises undertakings that were initiated through the land purchase program of the Federal Emergency Relief Administration and were subsequently transferred to the Farm Security Administration; it also includes a few projects initiated under Title III of the Bankhead-Jones Farm Tenant Act. The project activities, although directed towards utilizing the land for the specific purposes indicated, also contribute to conservation of soil and water resources. Work is conducted)

in most of the states where the regular soil conservation program operates.

Forestry development work carried on in 29 states is converting many acres of barren and partly wooded land into areas yielding valuable forest products. Primary importance has been attached to the provision of fire protection. Project workers also have reforested extensive areas of treeless and eroded lands and have improved existing stands through the removal of brush and diseased trees. Projects under the grazing program have generally been directed towards converting large acreages ill-suited to farming into grazing lands or into lands combining farming and ranching. The formerly rich grazing areas are being restored, watering facilities for stock established, necessary fences built, and the equipment prepared that is needed for range research carried on through land-grant colleges.

An effort has been made to improve natural conditions for wildlife in connection with both the forestry and grazing programs. This has involved the creation of game refuges where wildlife is protected from hunters, construction of water holes for game, and the development of lakes, streams, and fish-rearing ponds. Many of the sections where land utilization projects had been set up were suitable for recreation but had never been developed for this purpose. WPA funds have been used to make these areas available to the public in accordance with local needs. Developments in the different sections include camping facilities, picnic grounds, lakes, bathing benches, and other recreational facilities.

### **Bureau of Entomology and Plant Quarantine**

Second largest of the project programs of the various bureaus in the Department of Agriculture was that of the Bureau of Entomology and Plant Quarantine. With the \$7,655,000 transferred by the WPA the Bureau has carried on intensive plant disease and insect eradication work throughout the country, similar to the work for which funds were made available under earlier ERA Acts. Employment on these projects varied between 7,400 and a little more than 14,000 during the year.

Projects for the control of black stem rust have been operated in 17 states, chiefly in the

middle western and north central parts of the country. This control, maintained through the eradication of the barberry bushes on which the fungus is carried, helps to protect farmers from the losses in yield and quality of their small grain crops that result from stem rust. The protection of valuable pine forests in 27 states by eradication of currant and gooseberry bushes which spread white pine blister rust is another important project activity. This disease attacks all native species of white pine and endangers the Nation's existing stands, estimated to have a commercial value of \$400,000,000, as well as the young growths having an even greater potential value.

Peach trees have been the particular prey of the phony peach and the peach mosaic diseases. Projects for the eradication of these diseases are being conducted in a number of southern and western states. In Texas citrus groves and nurseries have been inspected to locate trees having citrus canker, and infected and abandoned trees have been removed. Work to protect elm trees from the Dutch elm disease has been carried on in seven states and the District of Columbia; this involved locating and taking out diseased trees and controlling insect carriers.

Among the other WPA-financed activities of the Bureau is the work undertaken in five states for control and eradication of the gypsy moth. This work includes destroying egg clusters, eliminating food plants, spraying, and applying burlap bands to tree trunks. Elimination of the thurberia plant is directed towards the control of a weevil for which the plant serves as host and which in recent years has invaded the cotton-producing areas of the southwestern part of Arizona with particular damage to cotton grown under irrigation. In addition to its plant disease and insect eradication activities the Bureau of Entomology and Plant Quarantine has one project for the demolition of three buildings in Hoboken, New Jersey, and the preparation of the site for a plant quarantine building.

### **Forest Service**

Almost \$7,000,000 was transferred to the Forest Service by the WPA to carry on an

important adjunct to its program; through this allocation from 8,000 to 14,000 persons have been employed in all but a few states of the country. The work is done chiefly in national forests and includes the construction and maintenance of fire-breaks, forest-fire lookout towers and observatories, landing fields, telephone lines, forest roads and trails, and miscellaneous buildings and structures. Improvements that will make forest areas available for recreational purposes as well as range improvements have been undertaken. Project workers have also planted, improved, and developed tree nurseries, thinned forest stands, combated insects and diseases, killed range-destroying rodents, eradicated poisonous plants, and aided in the development of fish and game resources.

WPA-financed projects of the Forest Service in more than 20 states and the District of Columbia have involved research work of various types including surveys and studies relating to forests, ranges, wildlife, and the management of lands and watersheds. Also, the Service has operated a forestry project in the prairie states which involved planting windbreaks and shelterbelts in cooperation with farm owners in North and South Dakota, Nebraska, Kansas, Oklahoma, and Texas.

### Bureau of Biological Survey

The Bureau of Biological Survey received over \$1,320,000 for development work on various phases of water and wildlife conservation in 22 states. Conservation and building up of breeding stocks and the restoration of natural environments for wildlife are the chief objectives. The land on which refuges are located are generally submarginal areas that are particularly suited to wildlife.

The actual work, through which between 1,000 and 3,500 persons have been employed, varies with the location of the refuge. Some projects have involved the construction of dams, dikes, and ditches to improve water areas and create marshes, thus promoting the growth of cover and food required by migratory waterfowl and shore birds. Suitable plants, shrubs, and trees have been started and various types of nesting islands have been constructed, which not only attract shore birds and other

species of wildlife but also serve to reduce soil erosion and aid in flood control. For upland game preserves, project workers have built fences, posted and marked boundaries, and constructed or rebuilt roads, fire lanes, and bridges. In several cases, buildings and other structures necessary for the proper administration and maintenance of the refuges have been built and landscaped. Shelters, picnic tables, fireplaces, bathhouses, and other facilities for public recreation have been provided in connection with the development work wherever feasible.

### National Agricultural Research Center

A program has been carried on by the Department of Agriculture to extend the research facilities of eight of its bureaus at the National Agricultural Research Center located in Beltsville, Maryland. More than \$1,000,000 of WPA funds was transferred and PWA funds were also made available to improve the general service facilities such as the heating plant, electric and telephone lines, and shop facilities, and to build or renovate garages, barns, roads, laboratories, greenhouses, and other properties. As many as 1,000 persons have been employed on this project during the year.

### Other Bureaus

The *Bureau of Home Economics* and the *Agricultural Adjustment Administration* received \$542,000 and \$122,000, respectively, from the WPA to carry on several research projects. Outstanding among the projects is a study of consumer purchases, operated jointly by the Bureau of Home Economics and the Bureau of Labor Statistics of the Labor Department with the cooperation of the National Resources Committee and the Central Statistical Board, and initiated under an earlier ERA Act.<sup>1</sup> The work involved analysis and preparation of reports based on the data concerning the levels of living, ways of spending, and sources of income of American families that had been collected in cities and towns of various sizes and also in a large number of farm counties. A

<sup>1</sup> See the *Report on Progress of the WPA Program*, June 30, 1938, pp. 100-106, for a description of the study.

second study conducted by the Bureau in co-operation with educational institutions in 15 states has been concerned with the physical measurement of almost 150,000 boys and girls from 4 to 17 years of age. This first scientific study of the body measurements required for the sizing of clothing is expected to be invaluable in determining standards for the proper sizing of patterns and ready-to-wear garments.

The Agricultural Adjustment Administration's WPA-financed project involves a series of studies connected with consumers' goods and problems arising from their standardization. The studies include surveys of Federal, state, and municipal trade standards for consumers' goods, analysis of the economic aspects of standardization and regulation, comparison of government preference and general consumer preference, and other studies of related subjects.

About \$4,000 in WPA funds was transferred to the *Bureau of Agricultural Engineering* to build a cotton warehouse and make some other improvements at its Experimental Ginning Laboratory in Stoneville, Mississippi. This project, for which PWA funds were also made available, provided five months' employment for about 48 persons.

## Department of the Interior

### National Park Service

Most of the WPA funds transferred to the Department of the Interior for work projects went to the National Park Service which received about \$8,805,000 for work in line with its general improvement program in national parks and monuments. Lighter types of construction and conservation work predominate. In addition to the improvement of recreational and administrative facilities, the historic, archeological, and scenic potentialities of the parks and monuments are being developed or made accessible in a manner that increases their appeal and usefulness to the general public.

Important advances have been made through the Service's project work in its recreational demonstration areas. Units of roads and trails already surveyed have been made passable, facilities for organized camps and other simple park structures built, water and sanitary

systems installed, dams constructed, and other activities carried on that are necessary for the conservation and protection of water, soil, forests, and wildlife resources.

Two projects of particular interest have been operated. At the Colorado National Monument units of road construction have been undertaken to expedite the completion of the Scenic Rim Drive approved in the Service's "Master Plan" for this area, and at the proposed Cape Hatteras National Seashore on the North Carolina coast extensive beach-erosion control work has been done. WPA funds have also been used for research and educational work at the Washington and regional headquarters of the Service and in some park and monument offices. Together the various WPA-financed projects of the Service have provided jobs for between 10,000 and 16,000 persons during the course of the year ending in June 1939.

### Division of Territories and Island Possessions

About \$800,000 in WPA funds was transferred to the Division of Territories and Island Possessions for project work in Alaska and the Virgin Islands on which employment has ranged from 400 to 2,000 persons. In Alaska, project activities have largely been limited to work on the Alaska Railroad and certain public improvements in municipalities. In the railway work WPA funds have been used exclusively for the labor needed in improving the railroad way. Through the municipal improvement undertakings, streets have been repaired, sewer and water lines installed, and sidewalks built in certain towns that previously lacked many of these facilities.

Project activities in the Virgin Islands vary widely in type. In the islands of St. Croix and St. Thomas, workers have improved streets and highways. Sanitation and water supply systems on both islands have been extended or improved. On three of the islands pens and dipping vats for control of cattle ticks have been constructed. A project to study the epidemic aspects of certain skin and blood diseases has been conducted which ultimately is expected to include examination of the entire population of Charlotte Amalie. Sewing rooms and several nursery-school projects have also been operated

and aid has been given to a local cooperative association in order to facilitate the handicraft work, cabinet-making, fruit-preserving, and farming by needy persons.

## Office of Education

With about \$590,000 transferred by the WPA, the Office of Education has been employing between 400 and 700 persons on its Federal forum and educational radio projects. Workers in various white collar classifications have assisted local school authorities in organizing, planning, and conducting public affairs forums. The local public agency of education provides the necessary supervision and also makes available school buildings and equipment. In connection with this program experiment stations have been established in 38 states. The educational radio project has as one of its major activities the production of network programs dealing with topics of national significance, such as the origin and development of the Bill of Rights, the work of the Federal Government, and relations with Latin-American countries. Another important project activity, carried on in 16 states, makes available to local educational groups such services as a script exchange, guides to production and training centers, transcriptions and recordings, and assistance in local radio production and research.

## Department of Labor

The *Bureau of Labor Statistics* has conducted three studies with the \$850,000 made available to it by the WPA. Employment has been provided for an average of about 760 persons during the year.

More than half the funds have been used for the building permits survey which covers four major kinds of information: building cycles previous to the World War; residential building by cost groups and by types of construction material for the years from 1936 through 1938; dwellings erected in unincorporated suburban sections of metropolitan areas, beginning with 1936; and the relationship between permit valuation and selling prices of dwellings. Field work has been conducted in all states under the direction of seven regional offices.

Work on the Bureau's urban study of consumer purchases has involved summarization for final publication of material on this subject obtained under an earlier project. (See page 123.) The two series of bulletins being prepared—one on consumer incomes and purchases and the other on average expenditures for specific goods by families of different income levels—provide a basis for predicting the probable shifts in demand for certain types of commodities which would result from given changes in income distribution and movements of population.

The Bureau's survey of employment in state, county, and city governments will enable it to fill the major gap which remains in its series on nonagricultural employment in the United States. The study covers the period from 1929 to 1938 and includes all state governments, all cities having a population greater than 100,000 and the counties in which these cities are located, and a representative sample of smaller cities and less populated counties.

## Department of the Navy

The *Bureau of Yards and Docks* of the Navy Department has been operating a program of construction, extension, and improvement of its facilities and structures chiefly at navy yards and air stations, and also at the Naval Academy and at some fleet operating bases, training stations, Marine Corps stations, submarine bases, field and supply depots, naval hospitals, and radio stations. For this purpose a total of \$14,011,000 was transferred from the WPA to the Navy Department. These funds, available for paying relief laborers, were used in conjunction with approximately \$36,000,000 that was supplied by the PWA for the purchase of materials and equipment and for the employment of skilled labor. WPA workers numbered from 12,000 to 22,000 persons during the course of the year.

Building work carried on under the Navy's improvement program involves the new construction or extension of shops, storehouses, barracks, hospital buildings, dispensaries, aviation and ordnance storehouses, and miscellaneous structures. Operations have been conducted in 14 states—all but three of them along the eastern seaboard—and in Puerto

Rico and the District of Columbia, with the most extensive work being done at the naval operating base in San Diego, and at the Mare Island (California), Philadelphia, and Brooklyn navy yards. Project workers have improved waterfronts through both new construction and rehabilitation of piers and quay walls. They have built railroad tracks, roads, and distribution systems; improved power plants and ship-building ways; provided increased storage facilities for water, gasoline, and fuel oil; and improved aviation landing fields.

## Department of the Treasury

### Office of the Secretary

Allocations of WPA funds totaling \$1,640,000 to the Office of the Secretary of the Treasury have been used by the *Bureau of Internal Revenue* and the *Division of Tax Research* for tax investigation and research. During the year the Revenue Bureau's project workers averaged 840 in number, many of whom were employed on investigations of stamp and other miscellaneous tax collections. Through this work millions of dollars of delinquent and deficient taxes about half of the total that project employees reported for assessment have been collected. Other project workers have canvassed retail liquor establishments to ascertain the compliance of dealers with liquor laws. Reported violations have resulted in collections also totaling several million dollars.

The Division of Tax Research with some \$600,000 in WPA funds has conducted research designed to meet the growing demands of both governmental and private agencies for more detailed information than has previously been available regarding income tax returns. From duplicate copies of about 5,600,000 returns for 1936 from individuals, four major groups of tabulations are being prepared. These include data on sources of income and deductions (including number of sources), family incomes (combining separate returns of husbands and wives), capital gains and losses, and the geographic distribution of various income classes. In addition a number of other tabulations have been made utilizing over 700,000 returns from corporations, partnerships, and fiduciaries.

Tabulation of these materials, on which employment increased steadily from about 100 to almost 2,000 persons after the project's initiation in November 1938, will make valuable data available for use in tax research, revenue estimation, and related fields.

### Coast Guard

The Coast Guard has undertaken a construction and improvement program with the \$330,000 transferred to it by the WPA. At most of the Coast Guard stations the work has largely been clearing, grading, trenching, and related roadway and ground improvement activities. On one project, however, steam, fire, electric, water, and sewerage services were provided. Through two other projects telephone wires were extended, and at one Coast Guard air station a runway was built.

### Other Bureaus

The project of the *U. S. Public Health Service*, for which \$179,000 was transferred by the WPA, provided for the summary tabulation and analysis of data collected in the National Health Survey conducted by the Service with funds made available under earlier ERA Acts.<sup>2</sup> The tabulations cover data collected in the chronic disease survey, the communicable disease study, and the occupational morbidity and mortality study. That portion of the work which had been financed with WPA funds was concluded by the end of February 1939, the remaining technical work being carried on by the regular Public Health Service staff under its regular appropriation. A small amount of WPA funds (\$8,000) was transferred to the *Procurement Division* for a project to decorate Federal buildings with painting and sculpture.

## War Department

### Quartermaster Corps

The Quartermaster Corps received the largest allocation of any of the Federal agencies to which WPA funds were made available during

<sup>2</sup> For a description of the National Health Survey see the *Report on Progress of the WPA Program*, June 30, 1938, pp. 95-100.

the year. A total of \$21,045,000 was transferred for construction and improvement work at 17 air fields and depots, 77 regular army posts, and 19 national cemeteries. A large part of these funds has been used to employ workers on a construction program for which PWA funds have provided materials and the skilled labor not available from relief rolls. Some WPA funds have also been used in extensive repair and rehabilitation work at various army stations. The number of workers employed through WPA allocations has ranged from 20,000 to over 45,000 during the year.

The construction work undertaken with WPA and PWA funds includes various types of buildings and utilities. Many of the buildings are to provide quarters for the personnel—quarters for about 700 none commissioned officers, for over 300 officers and families, and for about 80 nurses, and 69 barracks to accommodate a total of almost 19,000 men. Five hospitals have been built, with space for some 900 beds; outstanding among these is the Fitzsimons General Hospital at Denver, Colorado, with a capacity of 600 beds. The 12 theatre buildings constructed by project workers help fill a long-felt need for recreational facilities at army posts. In addition, a number of other buildings such as ordnance magazines, warehouses, garage and shop buildings, radio and fire stations, and schools were included in the combined WPA-PWA-financed construction work.

On the utility phase of the construction program, workers have installed auxiliary sewer systems of both sanitary and storm types, and have extended electrical distribution and transmission lines, water systems, telephone lines, and railroad tracks. Project workers paid from WPA funds have also been employed in the construction of roads, sidewalks, and curbs and in extensive landscaping work. These activities have been carried on in almost all states; prominent among the projects were those at the Air Corps Technical School in Colorado, at Fort Jay in New York, and at certain posts in Utah, Texas, Oklahoma, and Massachusetts.

The repair and rehabilitation work undertaken at various army stations through Quartermaster Corps projects financed with WPA funds included the renovation and remodeling

of barracks and quarters and the rewiring of buildings. Project workers also have modernized heating and plumbing systems, painted both exteriors and interiors, renovated windows and screens, and replaced foundations and defective masonry on all types of buildings. Of particular interest in connection with the rehabilitation program is the work begun on old Spanish fortifications, seawalls, and barracks at army posts in San Juan, Puerto Rico. The restoration of these structures will give several hundred years more of use to military monuments already over 400 years old.

### Corps of Engineers

The \$3,353,000 which was transferred to the Corps of Engineers by the WPA has been used for flood protection work in New England. Earth-fill dikes and embankments, concrete flood walls, and stop-log structures have been built and pumping plants have been installed in some instances to protect various cities along the Connecticut River in Connecticut and Massachusetts. Sites have been prepared for flood control dams and reservoirs on the Contoocook and Pemigewasset Rivers which flow into the Merrimack River above Concord, New Hampshire. In addition, flood control examinations, which include field surveys and sub-surface explorations, have been made in various river basins of five of the New England states. This project work has provided employment for between 100 and 1,000 persons during the first ten months and for as many as 2,150 persons during the remainder of the year ending in June 1939.

### Other Federal Agencies

Several other departmental bureaus or independent establishments of the Federal Government in addition to those already mentioned received allocations of WPA funds under Section 3 of the 1938 Act. Although funds in excess of half a million dollars were transferred to two of these agencies, most of the allotments involved much smaller amounts.

Of the \$683,000 transferred to the *Bureau of Fisheries* in the Department of Commerce the greater share was made available to improve

Federal facilities for satisfying the increased demands upon fish hatcheries in connection with restocking commercial and game fish. Project workers, numbering from 600 to over 2,200 persons, have renovated or enlarged buildings and equipment, laboratories, and rearing ponds at hatcheries in 35 states. On some projects, particularly those in states where the most extensive work has been carried on (Washington, Oregon, Texas, and West Virginia), water supply and drainage lines have been installed. For most of the work PWA funds were made available to finance the purchase of materials and the payment of such technical or skilled labor as could not be secured from among the needy unemployed. In addition, through a few of the WPA-financed projects, clerical and other white collar workers have aided in special scientific studies made in California, Michigan, and Massachusetts.

The *Bureau of Prisons*, in the Department of Justice, was provided with \$50,000 in WPA funds to operate two construction projects. Project workers built a utility tunnel, installed sewer and water lines, put up fences, and did clearing and grading, surfacing of roads, and incidental work around the institution at Tallahassee, Florida. On the other project at La Tuna, Texas, a dairy barn, hay and grain shed, and machinery shed were built and some incidental work done. The Department received an additional \$3,000 to complete a five-volume survey of release procedures (including probation, parole, pardon, and other forms of release both from penal institutions and through the courts), which had been conducted by the *Attorney General's Office* with funds from earlier ERA Acts.

A *Library of Congress* project in New York City, continuing the work carried on under previous ERA Acts, is making talking-book machines for blind persons. Reproducer needles and record envelopes and containers, as well as the book machines, were made under the \$142,000 allocation. The American Foundation for the Blind, Inc. furnished plans and technical supervision for the project, which employed an average of 114 persons, a large proportion of whom were blind or otherwise physically handicapped. The distribution of

the machines is handled by the Librarian of Congress who lends the equipment to such libraries as he deems appropriate to serve as regional or local centers. Talking books for use in the machines are provided by the Library from an annual appropriation of \$175,000 under "An Act to Provide Books for the Adult Blind."

The *National Resources Committee* project financed by \$40,000 in transferred WPA funds provides technical and coordinating service to two Nation-wide projects sponsored by State Planning Boards, one recording the extent and usage of publicly-owned and tax-reverting land and the other preparing six-year advance public improvement programs for states and their subdivisions. Units of the coordinating project in Cincinnati, Omaha, Portland (Oregon), and Dallas during April, May, and June employed an average of about 40 persons in assembling material for a permanent file of reference material, chiefly in map form, and developing detailed techniques for operating state projects in the two fields.

A total of \$167,000 was transferred to the *Rural Electrification Administration* for two projects which have employed an average of 200 persons during the year ending June 1939. Workers on one project were engaged in completing the construction of electric transmission lines in four counties of Mississippi, begun under allocations from the 1937 ERA Act. The bulk of the transferred WPA funds, however, was used in Baltimore, Maryland, and Washington, D. C. for the preparation of record strip maps or diagrams covering areas in the vicinity of REA projects. These maps, combining tracings of road maps with details from aerial photographs, are valuable in checking the operation and extension of transmission lines in rural areas.

The *Veterans' Administration* has been using WPA allocations totaling \$568,000 for work in connection with its PWA construction program carried on in 17 states. Workers on the parts of the program that are WPA-financed, ranging in numbers from 100 to over 1,000, have been employed chiefly on grading and excavating; building roads, sidewalks, and curbs; installing sewers and water mains; and extending steam and electric service lines.

# EMPLOYMENT ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PUBLIC RELIEF<sup>1</sup>

**D**URING June 1939 approximately 6,610,000 different households received some form of relief under public assistance programs or benefited from the wages paid to members of the households employed on Federal work and construction projects. It is estimated that there were about 19,500,000 persons in the households, a number equal to 15 percent of the population of the continental United States. Members of nearly half of the households had public employment; over two and a half million workers received wages for WPA work, a quarter of a million persons were employed on PWA projects, and another quarter of a million on the regular and emergency work of other Federal agencies. Youths benefited through enrollment in the CCC, assignment to NYA project work, and NYA student aid; between 210,000 and 280,000 youths were assisted under each of these programs in June 1939. Large numbers of households obtained aid under the state and local public assistance programs in which the Social Security Board participates. Thus aided in June 1939 were nearly 1,850,000 recipients of old-age assistance, over 300,000 family groups receiving aid for dependent children, and nearly 70,000 recipients of aid to the blind. Needy farm families received assistance under the Farm Security

Administration through the payment of nearly 70,000 grants. An additional type of public aid—general relief—was extended by state and local welfare agencies to 1,570,000 needy families and single persons who were either not benefiting or else receiving insufficient benefits under other programs.

Between June 1938 and June 1939 a moderate decline took place in the total numbers receiving relief or benefiting from Federal work and construction wage payments; the decline amounted to 1 percent in terms of households and 6 percent in terms of persons. The reduction in the aggregate for the different programs is attributable primarily to the decline of more than 11 percent in WPA employment, as measured by the average number of persons employed in each month on WPA-operated projects. The decline in WPA employment was offset to a very limited extent by increases in the other, relatively smaller, employment programs among which the Federal and non-Federal activities of the PWA were outstanding.

Over the year a substantial increase occurred in the number of students aided under the NYA, and smaller advances took place in the number of CCC enrollees and youths working on NYA projects. The number of recipients obtaining aid through the special types of public assistance programs also increased—old-age assistance by 11 percent, aid to dependent children by 20 percent, and aid to the blind by

<sup>1</sup> The subject matter of this article will be presented in more detail in a forthcoming publication of the Divisions of Research and Statistics of the Work Projects Administration.

<sup>A</sup> Percentages based upon data before rounding to the nearest thousand.<sup>B</sup> No Federal agency projects were financed by transfer of WPA funds prior to July 1938.

9 percent. In June 1939, however, there were 26 percent fewer farm families receiving Farm Security Administration grants than in June 1938, and the number of families and single persons receiving general relief had declined by 5 percent.

The early part of the 12-month period ending in June 1939 was marked by a substantial rise in WPA employment, a rise that was occasioned by the large amount of unemployment then prevalent. The early expansion, however, was more than wiped out in the last seven months of the fiscal year. There was continued expansion of the programs providing special types of assistance and, during that part of the year when seasonal demands for relief were greatest, in the aggregate number of families and single persons receiving general relief. An additional offsetting influence, though limited in its significance, was present in the expanding programs conducted under other agencies operating work and construction projects. This was a reversal of the situation existing in the summer of 1938 when there had been a relatively large transfer of workers from Federal agency projects to the WPA.

## Major Changes in the Number of Households and Persons Benefited, 1933-1939<sup>2</sup>

An analysis of the trends in the numbers of households and of persons benefiting through the Federal employment and relief programs during the 1933-39 period must recognize the reformulation of responsibilities that occurred in 1935. Outstanding among the changes brought about at that time was the initiation of the WPA program and the continuation or inauguration of allied programs through which the Federal Government accepted primary responsibility for meeting the problems created by unemployment. Until the latter part of 1935 the general relief program conducted under the Federal Emergency Relief Administration was the chief form of aid, except during a few months in the winter of 1933-34 when the Civil Works Administration program was in operation. In the latter part of 1935 emphasis shifted to the provision of work for different groups of employable persons under

<sup>2</sup> Estimated unduplicated totals of households and persons benefited are shown by months in Tables 56A and 56B on pages 132 to 135.

the programs of the WPA, NYA, PWA, and other Federal agencies. Another feature of the 1935 reformulation of responsibilities was the initiation of a broad program of social security, one phase of which involved Federal participation in the special assistance programs. After 1935 general relief as the residual program became a responsibility of states and localities.

### The 1933-35 Period

The years 1932-33 marked the beginning of actual Federal participation in providing assistance and work for needy persons. In preceding years such Federal construction activities as were carried on through use of regular appropriations had been comparatively limited in scope. Nor were the earlier activities directed towards meeting the unemployment problems which during the depression had rapidly outgrown state and local bounds and had soon overtaken their capacities.

The transition to Federal participation was begun in 1932 through the passage of legislation providing for distribution of Federally-owned cotton and grain and of the Emergency Relief and Construction Act. These measures, however, were noteworthy more for the change they introduced than for the extent of participation they involved. Through the Emergency Relief and Construction Act the Reconstruction Finance Corporation was authorized to make relatively small advances to states and loans to municipalities for unemployment relief purposes at the same time that it was authorized to make loans for self-liquidating projects of private concerns. The act also made available a relatively limited amount of emergency funds for public works of the Federal Government.

Participation in meeting the unemployment problem on a realistic scale was initiated in 1933 when the grant-in-aid program of the Federal Emer-

gency Relief Administration was inaugurated. This program accounted for the largest share of the households and persons receiving relief and public employment benefits during most of the remainder of 1933. Through this program general relief activities were conducted by states and localities with FERA financial assistance.

Other forms of work and assistance, although significant, were of limited importance in terms of the numbers of beneficiaries. Among the programs in which the Federal Government took part were the emergency work activities of the newly created Civilian Conservation Corps (then known officially as Emergency Conservation Work) and Federal Emergency Administration of Public Works (PWA), and the regular work of established Federal agencies. State and local governments, in addition, continued to give assistance to the aged, dependent children, and the blind, and to the various families and single persons who had been obtaining poor relief; these were forms of aid not superseded by the Federal measures initiated in 1933.

The work and relief programs were expanded in late 1933 and in 1934 to a level more nearly commensurate with the needs that existed during the depression years. The totals of over 8,000,000 households and 28,000,000 persons

CHART 8

### HOUSEHOLDS AND PERSONS BENEFITING FROM EMPLOYMENT ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PUBLIC RELIEF

which were reached in January and February 1934 and have not since been equaled were the outcome largely of the program conducted under the Civil Works Administration. This was a Federal program of project work that was broadened, for the purpose of stimulating recovery, to include many persons who, though unemployed, were not among those on the relief rolls. According to estimates about half of the 4,300,000 CWA employees in January 1934 were nonrelief workers. The CWA program was discontinued in April and replaced in part by an expanded FERA program which, after being substantially limited to direct relief activities during the CWA period, was enlarged

to include a broad work project program within its scope.

During the remainder of the FERA period the total numbers of households and of persons benefiting from the several relief and public employment programs moved generally downward with only temporary interruptions. From a low point of 5,800,000 households including 21,200,000 persons in June 1934, the total numbers increased moderately in the summer of 1934 as a result of intense drought and in the winter of 1934-35 because of seasonal needs—to 6,900,000 households and 24,800,000 persons in January 1935. In the spring and summer months of 1935 the expected seasonal declines

<sup>A</sup> See notes on pages 150-52 for description of data included.

<sup>B</sup> Less than 500 persons.

in combination with the generally downward trend resulted in large reductions. By November of that year the numbers of different households and persons aided through the relief and employment programs had dropped to 5,700,000 and 19,600,000 respectively.

The FERA program gave chief emphasis to its general relief activities under which both work and direct relief were extended, the former ordinarily accounting for a little less than half of total recipients. Special programs to take care of specific groups of persons were also developed; under the FERA these programs included transient relief, emergency education, college student aid, and rural rehabilitation.

Through other programs that were operative during the three-year period ending in 1935, public employment was provided under the CCC, PWA, and other Federal agencies and special types of assistance and poor relief through state and local agencies.

### The 1936-39 Period

The reformulation of responsibility which took place in 1935 gave recognition to the differences in the types of work and relief needs by the establishment of agencies to deal specifically with each of several phases of the problem. Funds for carrying on the programs

which the Federal Government then undertook were appropriated by the Emergency Relief Appropriation Act of 1935.

The Works Progress Administration was established with the primary objective of providing project work for a large share of the employable heads of families whose need for relief was occasioned by unemployment. The construction work of the PWA was continued with allocations of money from the ERA Act of 1935 that were used chiefly for non-Federal

construction projects. Emergency work was also undertaken by many other Federal agencies through use of funds provided by the 1935 ERA Act. The number of youths employed in CCC camps was increased, and the National Youth Administration was established within the WPA to conduct a program of part-time project work for young men and women no longer in regular attendance at school and a student aid program to assist high-school, college, and graduate students in remaining in

<sup>A</sup> See notes on pages 150-52 for description of data included.

<sup>B</sup> Less than 500 persons.

these circumstances relates to the care of needy persons not aided, or insufficiently aided, through other programs.

The unduplicated totals of households and of persons receiving relief and public employment after the reformulation effected late in 1935 and early in 1936 show no substantial break with the earlier data. The general downward trend that had begun two years previously continued in 1936 and most of 1937, reflecting the improvement in business conditions. Minor interruptions in the downward movement may be attributed to the greater seasonal needs for relief during winter months and to the 1936 drought. A large part of the decline was accomplished through curtailment in the number of WPA workers and, to a lesser extent, through reduction in the number of recipients of general relief—changes for which there was only partial compensation in the

rapidly expanded old-age assistance program.

The sharp depression beginning in the second half of 1937 reversed the downward movement in the aggregate number of households and persons benefiting under the various relief and public work programs. Between September 1937 and February 1939 the number of households increased from about 4,700,000 to 7,200,000, and the number of persons from 14,000,000 to 21,800,000. General relief played an important part in the initial phases of this expansion despite the limited capacities of state and local governments to enlarge their relief expenditures. The somewhat delayed increase in WPA employment was effectively under way in January 1938 and reached its peak in the autumn of that year. Throughout the period the programs providing special types of public assistance to meet the needs of the aged, dependent children, and the blind also continued to expand.

### PERSONS BENEFITING FROM EMPLOYMENT ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PUBLIC RELIEF, BY PROGRAMS

## Total Numbers of Persons Benefited

Trends in the total number of persons benefiting from the relief and employment programs during the 1933-39 period differ in one important respect from the trends in the number of households.<sup>3</sup> The count of persons has tended to rise more slowly and to drop more sharply than the count of households—an indication of the decline in the average number of persons per household. To some extent the decrease in the number of persons in the average household from almost four persons in 1933 to about three in June 1939 is attributable to the increased representation of single-person households. An important factor contributing to this result has been the continued expansion of the old-age assistance program through which successively larger numbers of one- and two-person households have been included in the aggregate number of recipients.

The program composition of the totals for persons throughout the 1933-39 period is shown in Chart 9. For consideration of the relative sizes of the different programs use is made of the program distribution of persons rather than of households because the former is better suited to a portrayal in broad terms of the relative significance of each of the programs. The data for persons avoid the implication of attaching equal importance to households benefiting from one program which would average between one and two persons per household and households benefiting from another program which might average in excess of four persons per household. Whether the actual data relate to persons or to households, however, a chart of the program composition of relief and public employment figures cannot show the exact importance of the different programs because of the existence of some duplication between programs.<sup>4</sup> The problem of duplication has been met in Chart 9 by including persons in households which benefited from more than one program in that program which occupies the lower position in the chart.

<sup>3</sup> For most programs the number of persons benefiting was not regularly reported; in such cases estimates were prepared in accordance with information derived from special studies of the WPA and the Division of Public Assistance Research of the Social Security Board.

<sup>4</sup> The nature of the duplication is discussed in the notes to the tables appearing on page 150.

## Movements in Indexes of Unemployment and Persons Benefited

A marked degree of correspondence has been present between trends in estimated unemployment and in the total number of persons benefiting through the relief and employment programs. This may be seen in Chart 10 which equates at 100 percent in the July 1934-June 1935 base period the unemployment estimates prepared for the Committee on Economic Security and the count of persons benefiting from the several programs. The chart indicates that the downward movements of the indexes from 1934 to the middle of 1937 were substantially equivalent; in 1938 and 1939, however, the particular measure of unemployment used in the chart was clearly above the measure of relief and public employment. The year and a half preceding the 1934-35 base period appears as a formative stage—during most of 1933 the relief and employment programs had not yet assumed the breadth that they were later to develop and in the winter of 1933-34 the CWA program raised the scale of activities to a level not since attained.

Characteristic seasonal changes are found in the unemployment index and these are generally paralleled by comparable fluctuations in the number of persons benefiting under the relief and public employment programs although the influence of droughts introduced contraseasonal changes in the latter series in 1934 and 1936. Most interesting from many viewpoints, however, are the two years ending in June 1939. It is noteworthy that the adjustment in the scope of the combined programs to the reversal in employment conditions was slow in getting under way and was not great enough in magnitude by the winter of 1938-39 to bring the relief and public employment index into line with the index of unemployment.

Any analysis of the similarities in the movements of the unemployment and persons indexes must recognize the element of incomparability that is introduced by the inclusion in the latter series of persons whose need is attributable to unemployability rather than to unemployment. Exclusion of such persons before comparison is made with the unemployment series, although desirable, is difficult

of accomplishment because of the technical problems arising, particularly during the first half of the 1933-39 period. The effect of including in the count of persons those individuals who were aided because of unemployment is to increase the absolute totals for the series throughout, to reflect the 1936-39 expansion in the programs providing special types of assistance, and to limit the relative magnitude of the seasonal fluctuations in the series.

A number of factors tend to cause the lag, such as occurred in 1937 and 1938, in the reaction of the relief and public employment programs to increases in unemployment. There are, on the one hand, those factors which delay the provision of assistance on a broader scale. Mention should be made of limitations on available funds and the time required to make additional funds available; another factor arises from the time needed to effect the necessary administrative and procedural adjustments. More important in some respects is the influence which originates with the workers who have lost their jobs in private industry.

Many of the newly unemployed persons are able to support themselves and their families for varying periods of time through use of their savings and resort to other temporary expedients. Unemployment compensation benefits have recently provided an additional means

of support since in January 1938 unemployment compensation payments were begun in 21 states and the District of Columbia. (A program was in operation in Wisconsin prior to January 1938 and all but two of the remaining states had initiated payment of unemployment compensation by June 1939.) The effect of this program has been limited, however, partly as a result of the relatively short duration of the period during which benefits can be paid (seldom in excess of 16 weeks) and partly because of other factors such as the length of the interval during which wage credits had accrued and the existence

of important fields of activity that are not covered by compensation plans. With the exhaustion of the various expedients upon which reliance could temporarily be placed, the unemployed turned to the relief and public employment programs for assistance.

### Recent Changes under the Various Programs

The following summaries of the relief and employment programs are limited to a brief review of the general character of each of the programs and the major changes that have taken place during recent years. Quantitative aspects of the discussion in each instance are in terms of the recipient data reported for the particular program, without reference to the extent of duplication that may occur between programs. The basic data are provided in Tables 56A, 56B, and 57, the first two of which show the number of recipients under each program from the beginning of 1933 through June 1939, and the third, the number by states and by programs in June 1939.

### Works Progress Administration

The program of the WPA has been of outstanding significance in recent years among the

employment-providing activities undertaken by the Federal Government. Since 1935 other programs have seldom engaged workers numbering in excess of 400,000, whereas WPA employment has ranged upward from about

1,450,000 to slightly over 3,000,000. The WPA program has also evidenced a variety and flexibility which, in addition to its magnitude, are necessary to the fulfillment of the purpose for which the WPA was established in 1935.

that of providing a maximum number of jobs for needy unemployed workers on useful public projects.

In its broad approach the WPA program stands in contrast with other types of Federal work and construction programs. The latter have either provided employment for special groups of workers, such as the CCC and NYA programs for youths, or afforded work to relatively large proportions of experienced construction workers as has been true of the heavy construction of the PWA and similar undertakings of other Federal agencies. WPA workers have been drawn from all classes of the unemployed in all parts of the country and have represented the economic heads of families in need of relief because of unemployment. They have received monthly security wages in accordance with a schedule of earnings designed to meet the subsistence requirements of families.

The number of WPA workers, as is noted in greater detail in another section of this report, rose rapidly in 1935 after the initiation of WPA project employment in the summer of that year and reached approximately 2,700,000 workers by the end of December. Many of the newly assigned WPA employees had previously been working on projects prosecuted under the Emergency Work Relief Program of the FERA. Early in 1936 further increases in WPA employment brought the total number of WPA workers to slightly more than 3,000,000 (February 1936). For about a year and a half thereafter the number of persons working on WPA projects moved downward in keeping with the improved private employment conditions; a low average of less than a million and a half was reached in the fall of 1937. The reversal in business conditions then caused an upward movement in the trend of WPA employment which lasted for a year and resulted in an employment peak about 200,000 above the high point of 1936. Subsequent curtailment of the WPA program reduced the number at work on WPA projects to less than 2,500,000 during June 1939.

Throughout the year ending in June 1939, WPA funds were used to finance a certain amount of Federal agency project work that closely resembled the project activities conducted by the WPA. Such Federal agency

work represented a continuation of part of the activities that in prior years had been carried on by the Federal agencies with direct allocations of emergency funds. The actual number of workers employed by Federal agencies on WPA-financed projects was not large, however, in comparison with the employment provided on WPA-operated projects. During the first nine months of the year the WPA-financed Federal agency employment did not vary far from 90,000 and only during May and June 1939 did it reach an average of 130,000 workers.

The preponderance of the WPA program in the total for the several Federal work and construction programs has already been noted as well as its flexibility in adapting itself to changing unemployment conditions. In comparison with all programs through which relief has been extended or employment provided on Federal work and construction projects the WPA program also is outstanding. During a considerable share of the time since 1935 the persons benefiting from WPA work accounted for more than half of the total number assisted under all programs. Only in 1937 and in early 1938—a period of relative prosperity followed by the first months of recession—did the number of persons benefiting through WPA work fall substantially below half the total number (Chart 9).

## National Youth Administration

The NYA was established in 1935 to administer a program of assistance for young people. Through project activities the NYA has provided part-time employment and work experience for out-of-school youths in need of relief; the student aid program has supplied monthly earnings to needy young persons who are attending school. The latter program is a continuation of the college student aid program of the FERA, broadened to include high-school students as well as college students.

The NYA student aid program for young people who without this help would not have been able to continue their education assisted somewhat larger numbers of students during 1938-39 than during the preceding school year. In June 1939, at the end of the school year, about 280,000 students benefited under the

NYA. The maximum for the year was reached during the first few months of 1939 when about 380,000 were aided; this figure represents about 50,000 more students than were assisted during the same months of 1938 and 50,000 less than in the first four months of 1937. Students receiving NYA aid are required to work under the direction of local school authorities for a sufficient number of hours each month to earn their monthly allowances at prevailing hourly rates of pay. The varied activities planned by the school authorities range from construction and improvement work in connection with grounds and buildings to laboratory, library, research, and clerical work.

Employment on the NYA work project program increased steadily throughout the calendar year 1938 to reach an all-time peak of 242,000 in February 1939. Gradual declines during the following six months brought the number down to about 211,000 in June 1939, a figure only slightly higher than that for June 1938. NYA project workers, practically all of whom are between 18 and 24 years of age, have been engaged on a part-time basis in the many types of work that have been prosecuted under the direction of NYA authorities.

NYA projects have involved construction activities such as road improvement and remodeling and new construction of buildings and recreational facilities; conservation work; production activities conducted through sewing, woodworking and metalworking projects; and recreational leadership, book repair, clerical and research assistance, and other kinds of non-construction activities. Training related to project work or to specific occupational requirements of private industry has been made available to NYA project workers, partly on their own time and partly on project time. NYA supervisors and personnel from other agencies or from educational institutions have supplied the instruction.

### Civilian Conservation Corps

The CCC program was initiated in 1933 to operate camps providing employment and vocational training for young men who are unemployed and in need of employment. For

enrollment in the CCC it has been required since July 1, 1937, that young men, in addition to being unemployed, must be between the ages of 17 and 23 inclusive, unmarried, not in regular attendance at school, and willing to allot to their dependents about three-quarters of the usual \$30 monthly cash allowance. During the six-month enrollment period the enrollees live in camps where most of them participate in education and training programs that supplement the experience gained through project work.

CCC projects, in the supervision of which various Federal and state agencies cooperate, have dealt chiefly with the conservation and development of natural resources. Among the major kinds of CCC operations are those for improving the Nation's forests and protecting them from fire and destructive diseases and insects; controlling erosion and floods; providing irrigation and drainage; developing recreational facilities in parks and forests; and establishing wildlife refuges.

From month to month during the year ending in June 1939 the average number of CCC enrollees fluctuated between 260,000 and 300,000 with discharges and replacements at the end of the enrollment periods chiefly responsible for such changes as occurred. During 1935 and early 1936 the total number of enrollees was considerably above the recent enrollment levels. Average monthly enrollment exceeded 480,000 in August and September of 1935 and only once between April 1935 and April 1936 was it below 350,000. By the spring of 1937 the number was reduced to a little below 300,000, a level from which there have since been only minor deviations.

### Public Works Administration

Since 1933 the Federal Emergency Administration of Public Works has been administering a program of heavy construction projects prosecuted on a contract basis and supplying work for large numbers of construction workers. During 1934 and 1935 most of the PWA funds were used for Federal projects; these projects provided employment for almost 450,000 persons at the peak of activities in June and July of 1934, a height not approached in later years.

The larger part of PWA employment since early 1936 has been on the non-Federal projects of state and local governments. The PWA has made grants of Federal money up to 45 percent of the total cost of these projects—the remainder either being supplied to the sponsors through PWA loans or raised directly by the sponsoring bodies.

Employment on PWA non-Federal projects reached a peak of about 250,000 workers in the summer of 1936 and declined thereafter until the late summer of 1938. At that time the influence of newly appropriated funds initiated an increase in PWA non-Federal employment that continued throughout the fiscal year. In June 1939, about 240,000 persons were employed on PWA projects, most of which were non-Federal undertakings; this figure was larger than any reported since November 1936.

Variations in the volume of employment on the Federal projects of the PWA reflected the different methods used in financing Federal construction work. From the latter part of 1933 until about the end of 1935 the largest share of the heavy construction work of the Federal Government was financed with PWA appropriations. Beginning in 1935 funds for Federal construction activities were for a time supplied chiefly through the ERA Act of 1935; this accounted for the greater importance after 1935 of the emergency employment provided through other Federal work and construction projects. Although some funds for Federal projects were made available to the PWA in the PWA Appropriation Act of 1938, the recent tendency has been towards the financing of Federal construction through the regular appropriations of the various agencies. The shifting away from PWA financing of Federal construction has restricted PWA operations more and more to non-Federal undertakings.

### **Other Federal Work and Construction Projects**

Other Federal work and construction activities, referred to in connection with the PWA program, include both the regular construction work undertaken by various Federal agencies that is financed from regular appropriations

and the extension of operations made possible through the use of emergency funds. Some, though by no means all, of the Federal agency work provided through the non-PWA emergency funds has emphasized the employment of persons certified as in need of relief.

Employment on Federal work and construction projects financed with emergency funds—chiefly from the ERA Act of 1935—reached its peak during June, July, and August 1936 when more than 400,000 persons were at work. Gradual but continued declines in this employment brought the total to approximately 150,000 workers in July 1938, and by June 1939 less than 10,000 persons were employed on the other Federal projects financed with emergency funds. The decline in the last year may be attributed in large part to the fact that many of the projects that at one time had been financed with emergency funds were later financed in other ways: with regular appropriations, with PWA funds, or with WPA funds transferred under authority of Section 3 of the ERA Act of 1938.

Construction employment provided through regular Federal funds was relatively large until the latter part of 1933 when a decline to fewer than 50,000 workers reduced the number to less than a quarter of the previous volume. This decline reflected a shift in the manner of financing the construction work of Federal agencies. Construction activities of Federal agencies that were formerly financed from regular appropriations were provided for under provisions of the National Industrial Recovery Act which appropriated substantial sums to PWA to be allocated for these purposes.

Especially noteworthy was the suspension of Federal-aid highway grants beginning with the fiscal year 1933-34 and the substitution of PWA funds for the continuation of highway and road construction work of the Bureau of Public Roads. Persons employed on all such projects have been included in the PWA Federal project employment totals. The resumption of Federal-aid highway grants in the fiscal year 1935-36 was an important factor in the gradual upturn of regular Federal construction employment in 1936. Subsequent increases were in part attributable to the fact that a number of agencies which had been receiving

PWA and other emergency funds obtained regular appropriations to continue and expand their construction activities. Employment on regular Federal construction projects reached a total of about 246,000 workers in September 1938, the peak for the 1933-39 period.

### Special Types of Assistance

Important among the various programs under which aid has been extended through other means than by the provision of project work are the three special assistance programs in which the Social Security Board participates. The programs for assisting the aged, dependent children, and the blind are administered by the states and localities with Federal participation in those states where programs meet the requirements of the Social Security Act. The Federal Government participates through grants of funds proportional to the amounts made available by the states—one-third of the state's contribution in the case of aid to dependent children (one-half beginning in January 1940) and one-half in the case of the other two programs.

Assistance for the aged, the blind, and dependent children had been provided under state and local auspices on a limited basis prior to 1936. In 1936 and 1937 initiation of Federal financial participation stimulated a large expansion of the special assistance programs. In the two-year period the number of recipients of old-age assistance quadrupled to reach a total of approximately 1,600,000 in December 1937; the number of families receiving aid to dependent children rose from about 120,000 to almost 230,000; and the number of blind persons aided increased from about 35,000 to 56,000. Further but more gradual expansion of these programs took place in 1938 and the first half of 1939.

By July 1938 approved plans for old-age assistance were in operation in 47 states and the District of Columbia; in Virginia a program of old-age assistance was inaugurated in September 1938. During the course of the year—from July 1938 through June 1939—the number of recipients increased from 1,660,000 to 1,850,000, a rise of 11 percent. Differences in age limitations, residence, and other eligibility requirements and in the amounts of state and

local funds available have been important factors influencing the relative numbers aided in the various states.

Between June 1938 and June 1939 the number of families receiving aid to dependent children rose 20 percent. Part of this increase from 258,000 to 311,000 families was due to the beginning of Federal participation in Florida and Virginia during the year; a total of 40 states and the District of Columbia had approved plans in operation by June 1939.

Programs for aid to the blind under plans approved by the Social Security Board were in operation in 40 states and the District of Columbia during June 1939. Federal participation in this type of aid was begun in Connecticut, Mississippi, and Virginia during the last fiscal year. The number of recipients rose in the course of the year from 62,000 to 68,000.

### Farm Security Administration

The FSA is concerned primarily with assisting low-income farmers and farm tenants. This agency took over and expanded work that had been initiated under the rural rehabilitation program of the FERA, under certain bureaus of the Department of the Interior, and under the Agricultural Adjustment Administration. The FSA has given chief emphasis to assisting farm families in agricultural areas either through grants to families in need or through loans for the purchase of livestock, equipment, and land to families likely to become self-supporting. Grants have been made to provide needy farm families with food, clothing, and medical attention when conditions prevented the development of standard farm loans.

During June 1939 about 69,000 FSA grants were made to farmers, a total that represents a decline of 26 percent from the June 1938 figure. A large proportion of the recipients of FSA grants reside in the agricultural states of the Middle West, and a third of the families receiving grants in June 1939 were located in North and South Dakota.

Throughout the operation of the FSA program the monthly volume of grants has shown wide fluctuations. As might be expected a large seasonal element has been characteristic, reflecting variations in agricultural activity.

The highest of the winter levels occurred during the first few months of 1937 when large numbers of farm families in need of assistance as a result of the severe drought of the previous summer were transferred from the WPA to the FSA. The numbers of grants made during the two succeeding winters were of about equal magnitude—usually between 120,000 and 130,000 per month. The spring decline of 1939, however, was much more rapid than that of 1938; largely responsible for the greater change in 1939 were the reduction in available funds and the general improvement in agricultural conditions.

## General Relief

General relief has been a residual program since 1935 when the Federal Government withdrew from this field to participate in programs designed to aid the unemployed and special groups needing assistance. Subsequent to the discontinuance of the FERA the practices of the state and local welfare and relief agencies in extending general relief have varied greatly from place to place. The general relief programs of different areas, however, have been residual activities which provide assistance to persons not receiving other kinds of aid or

receiving insufficient aid under other programs. A residual group of needy persons necessarily remains after the operations of other programs have been taken into account, because the other programs as a group do not assist all classes of the needy and because the coverage of other programs is often incomplete. For this reason general relief has been extended to such types of needy persons as the following: unemployable persons not qualifying for the aid provided through the three special programs in which the Social Security Board participates; families that are not assisted through the work programs of the WPA and other agencies because of shortage

of funds, limitations in the occupational backgrounds of the persons needing employment, and similar factors; families and persons requiring temporary assistance; and families needing assistance in addition to that provided through other programs.

Fluctuations in the number of cases receiving general relief reflect the influence of a number of factors which differ greatly from state to state and from community to community. Marked seasonal variations occur in many areas as a result of increased physical needs during winter months and a characteristic tendency towards larger numbers of unemployed

TABLE 58A. EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PAYMENTS FOR PUBLIC RELIEF, BY PROGRAMS—Continued

MONTHLY: JANUARY 1933 TO DECEMBER 1935

[In thousands]

at that season of the year. The effect of unemployment, however, has been much less marked in some areas than in others. This is particularly true of the South where most states give little or no aid to families with employable persons; in this region limited funds have kept the general relief loads relatively low and many needy families receive no form of aid except surplus commodities. In other areas general

relief is greatly influenced by the amounts of funds made available through state and local financial provisions.

Administrative policies with respect to eligibility of employable single persons and families benefiting under other programs or from private employment have their effect in the areas to which they apply. Payment of unemployment compensation benefits tends somewhat to reduce

TABLE 58B—EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PAYMENTS FOR PUBLIC RELIEF, BY PROGRAMS <sup>a</sup>

<sup>a</sup> See notes on pages 150-52 for description of data included.

<sup>b</sup> Less than \$500.

or delay the need for relief but has not been a major factor in this respect, partly because of the limited duration of the benefit periods which seldom may exceed 16 weeks. Despite the effects of such influences as have been mentioned, the national relief totals have necessarily been responsive to changes in economic conditions and in the volume of other relief and employment activities.

When unemployment began to mount in the fall of 1937, the general relief program was the first to be affected. Between October 1937 and February 1938 general relief cases rose from 1,270,000 to nearly 2,000,000. The expansion in WPA employment was slower in getting under way, but soon took over a considerable share of the burden. However, general relief rolls remained high in the early months of 1938

because of the continued influx of the unemployed who had exhausted their resources, and throughout the year the number of families and single persons aided remained above the number for the corresponding months of 1937.

Some improvement in business conditions and a relatively high level of WPA employment assisted in reducing the numbers receiving relief in the first half of 1939. Declines were particularly noticeable in the industrial areas of the Middle West which had shown unusually large increases in the previous year. Shortage of funds contributed to the decline in many areas. Limitations of state and local funds tended to prevent the 1939 declines in WPA employment from increasing materially in the number receiving general relief in many areas.

A notable proportion of the recipients of general relief have been concentrated in a few states. The six states which in June 1938 reported caseloads of over 100,000—California, Illinois, Michigan, New York, Ohio and Pennsylvania—accounted for three-fifths of all families and single persons receiving general relief, although their populations represent only two-fifths of the population of the United States. Furthermore, the concentration was even more marked in June 1939 when these states together reported 64 percent of the Nation's general relief recipients despite marked reductions in Michigan and Ohio.

## Payments to Recipients

Total payments made to recipients under the various relief and employment programs, shown by months in Tables 58A and 58B on pages 144-45 and 146-47, respectively, were determined in part by the factors affecting the number of recipients. Influences of this kind are reviewed above in connection with the recipient data. Total payments are also affected by the amounts paid to individual recipients. In the course of the years since 1933, the total amounts to recipients increased relative to the total unduplicated number of households aided, indicating that the average payments increased.

General relief, which was extended on a budgetary deficiency basis, represented a major portion of the total payments during the three years ending in 1935. Throughout this period

when the FERA was making grants to states, the average monthly amount of relief extended per case increased substantially as a result, in part at least, of the measures taken by the FERA to promote the payment of adequate benefits. With the development in 1935 of the various specialized programs of employment and relief, payments made on a budgetary deficiency basis declined in relative importance. More adequate payments were made in the form of security wages on WPA projects. The expansion of the PWA and other Federal work and construction activities also tended to increase average payments. Most of this employment was provided through private contractors at prevailing rates of pay and hours of work.

The total amount extended to recipients of relief and employment under all programs in June 1939 was 3 percent higher than the total for June 1938 despite the fact that the number of households was 1 percent lower than the corresponding 1938 figure. The difference reflects the increased wage rates paid on WPA projects in southern states and the continued expansion of employment on projects financed from PWA and regular Federal funds.

The amount spent for general relief also increased slightly whereas the number of cases receiving this type of aid decreased by 5 percent between June 1938 and June 1939. In this instance the increase in the average was attributable in part at least to the greater concentration of general relief in states where relatively large payments are characteristic.

In the course of the year there was considerable variation in the state averages of payments under the special types of public assistance programs although the month-to-month changes in the various states offset each other sufficiently to leave the national averages fairly constant. No change occurred in the averages for the CCC since the monthly amounts shown for this program were estimated at \$70 per enrollee throughout the entire period of its operation.

The total amounts paid to recipients under each of the different relief and public employment programs during June 1939 are shown by states in Table 59. The state data for the general relief program and the three special

<sup>A</sup> See notes on pages 150-52 for description of data included.<sup>B</sup> Less than \$500.<sup>C</sup> Estimated.<sup>D</sup> Excludes medical care amounting to \$7,000 because the number of cases receiving this type of aid only is not available.

types of public assistance administered under the Social Security Act were greatly influenced by local differences in living costs and the adequacy of state and local funds. Differences in WPA monthly security earnings and in prevailing local wage rates were factors affecting the state data for the employment programs.

### Notes on Coverage and Source of Data

The estimated unduplicated total numbers of households and persons, discussed in preceding pages and shown together with amounts received in Tables 55 through 59, include recipients benefiting under the following programs and agencies: Emergency relief financed in part from Federal Emergency Relief Administration funds; general relief, including outdoor poor relief, financed from state and local funds; subsistence grants made by the Resettlement Administration and its successor, the Farm Security Administration; the three special types of public assistance (old-age assistance, aid to the blind, and aid to dependent children) which, from February 1936, have been financed in part from Federal funds under the Social Security Act; the Civilian Conservation Corps; the Civil Works Program; the Works Progress Administration; the National Youth Administration; the Public Works Administration; and employment on all other work and construction projects financed in whole or in part from Federal funds. The estimates do not include institutional care and the distribution of surplus commodities, nor are the regular construction activities of state and local governments that are carried on without Federal grants-in-aid covered in the composite totals. The scope of the compilation has not been extended to include the programs whereby rural rehabilitation loans have been made by the Resettlement and Farm Security Administrations and unemployment compensation and old-age benefit payments made through the insurance programs of the Social Security Board.

The scope of the data for each of the several Federal employment and public relief programs is reviewed by agencies in the notes that follow. Only the continental United States is covered in each instance. Employment and earnings figures for Federal work and construction projects cover all workers—both relief and nonrelief, if such a distinction is made. Administrative employees are excluded throughout. Unless otherwise specified the WPA is the source of the data.

Both the household and the person estimates are based on data reported for the programs adjusted to eliminate the duplication which arises from the fact that in the course of any given month some households (or persons) receive aid through more than one program. Allowance for duplication between programs is required in such cases as that of a WPA worker receiv-

ing general relief to supplement his WPA earnings or that of a family supported chiefly by its WPA worker but aided also through the NYA or CCC employment supplied to another member of the family. Duplication between programs is sometimes technical in nature, a result of the fact that assistance or work may be provided during part of a month under one program and during the remainder of the same month under another program; this type of duplication assumes important proportions at certain times, as, for example, in the fall of 1935.

A third kind of duplication would be present if the recipient totals reported for two of the programs were used directly as a measure of the number of households. In the case of one of these—the CCC program—a small adjustment is required because of instances of enrollment in the CCC of more than one member from a household. Similarly, the reported number of recipients of old-age assistance must be adjusted because in certain states it is required that separate grants be made to husbands and wives when both are eligible to receive old-age assistance.

Unduplicated totals of households and of persons are presented for each of the months in the 1933-39 period only on a Nation-wide basis. The allowances for duplication in certain instances were based on sample information which was believed to be adequate only for making adjustments in totals for the country. Such information is not suited for use in adjusting individual state figures because of the existence of wide variation among the different states. Unduplicated state totals consequently have not been developed.

The unduplicated estimates were prepared by the Social Security Board and the WPA. Duplication within the three special types of public assistance (old-age assistance, aid to the blind, and aid to dependent children) and between these programs and general relief for months subsequent to June 1936 was estimated by the Division of Public Assistance Research, Social Security Board. All other adjustments for duplication were prepared in accordance with methods developed by the Division of Statistics and the Division of Research of the WPA.

### Works Progress Administration

*Employers:* Data represent average weekly employment during the calendar month on projects financed from WPA funds. Separate figures are shown for WPA-operated projects and for WPA-financed projects operated by other Federal agencies.

*Amounts:* Data represent total earnings as shown on payrolls ending during the calendar month of persons employed on WPA-financed projects as described above.

### Public Works Administration

*Employers:* Data represent average weekly employment during the month ending on the 15th of the

specified month on projects financed in whole or in part from PWA funds.

*Amounts:* Data represent total earnings shown on project payrolls ending within the aforementioned monthly period of persons employed on the PWA projects as described above.

*Source:* Bureau of Labor Statistics, Division of Construction and Public Employment.

### Civil Works Program

*Employees:* Data represent the number of persons employed under the Civil Works Program during the peak week of the calendar month in each state.

*Amounts:* Data represent the estimated amount of earnings during the calendar month of persons employed under the Civil Works Program.

### Other Federal Work and Construction Projects

*Employees:* Data represent average weekly employment during the month ending on the 15th of the specified month on *other* work and construction projects financed in whole or in part from Federal funds. These include projects financed from RFC funds; from funds appropriated or allotted to agencies other than WPA, NYA, PWA, and CCC, under the ERA Acts of 1935, 1936, 1937, and 1938; and from regular Federal appropriations, including Federal-aid highway funds.

*Amounts:* Data represent total earnings shown on project payrolls ending within the aforementioned monthly period of persons employed on the Federal agency projects as described above.

*Source:* Bureau of Labor Statistics, Division of Construction and Public Employment, January 1936 to date. Data for months prior to January 1936 are partly estimated.

### National Youth Administration

*Employees:* Data represent the number of different students employed under the student aid program and the number of different persons employed on NYA work projects during the calendar month.

*Amounts:* Data represent total earnings shown on payrolls ending during the month of student aid recipients and of persons employed on NYA work projects.

### Civilian Conservation Corps

*Enrollees:* Data for total United States represent average monthly enrollment (including enrollment of Indians). State data represent enrollment as of the last day of the month by state of residence, with the exception of Indian enrollment for which the monthly average by state of employment is used.

*Amounts:* Data are computed from average monthly enrollment and estimated average monthly benefits of

\$70 per enrollee. The distribution of the United States total by state of residence is estimated.

*Source:* Civilian Conservation Corps.

### Special Types of Public Assistance

*Recipients:* Data represent the number of recipients in states which granted aid under the titles of the Social Security Act providing for old-age assistance, aid to the blind, and aid to dependent children, and the number of recipients of similar types of assistance in states not participating under the act; the latter are partly estimated for all months. Recipients of the first two types of aid may relate to families, couples, or single unattached individuals, depending on state practices. For the aid to dependent children program, data represent the number of families receiving aid. Programs for aid to dependent children were not operating with Federal participation during June 1939 in Connecticut, Illinois, Iowa, Kentucky, Mississippi, Nevada, South Dakota, or Texas; nor programs for aid to the blind in Illinois, Missouri, Nevada, Pennsylvania, or Rhode Island.

*Amounts:* Data represent obligations incurred from Federal, state and local funds for each month for the three special types of assistance in states administering the special types of assistance under the Social Security Act, and payments from state and local funds in states not participating under the act. Beginning with July 1937, data include relief in kind, payments to physicians for medical care, and other items which are not reimbursable from Federal funds. Data on assistance given in states not participating under the act are partly estimated for all months.

*Source:* Division of Public Assistance Research, Social Security Board.

### General Relief

*Recipients:* Data on the number of emergency relief cases for the period 1933-35 represent the number of different families and single persons receiving work and direct relief at any time during the calendar month under the general relief program of state and local emergency relief administrations. The estimated number of outdoor poor relief cases aided by local authorities during the month under provisions of the poor laws is shown separately for this period but after 1935 this type of relief is included in the general relief figures. Data on nonrelief employment represent the number working on Emergency Work Relief Program projects during the peak week of the month in each state. All general relief recipient totals are partly estimated for January through June 1933 and for January 1936 to date.

*Amounts:* Data represent obligations incurred during the calendar month for relief extended to cases and earnings of nonrelief persons as described above.

*Source:* April 1937 to date, Division of Public Assistance Research, Social Security Board.

**Transient Relief**

*Cases:* Data represent the estimated number of families and single persons receiving transient relief during the calendar month from state and local emergency relief administrations.

*Amounts:* Data represent obligations incurred during the calendar month from Federal, state, and local funds for transient relief extended to cases by state and local emergency relief administrations. Data for the first six months of 1933 and for months subsequent to June 1935 are partly estimated.

**Emergency Education (FERA)**

*Employees:* Data represent the number of different persons employed during the month.

*Amounts:* Data represent the obligations incurred during the month for earnings of persons employed on the program.

**Student Aid (FERA)**

*Students:* Data represent the number of different students employed during the month.

*Amounts:* Data represent obligations incurred during the month for earnings of students employed on the program.

**Rural Rehabilitation (FERA)**

*Cases:* Data represent the number of cases receiving advances for subsistence or capital goods during the month. Data are partly estimated for months beginning with July 1935, when this program was transferred to the Resettlement Administration.

*Amounts:* Data represent the amount of obligations incurred during the month for advances to cases specified above. Data for months beginning with July 1935 are partly estimated.

**Farm Security Administration Grants**

*Grant Vouchers Certified:* Data represent the net number of emergency grant vouchers certified by the Farm Security Administration (formerly the Resettlement Administration). Ordinarily only one grant voucher is certified per month for a given case. Beginning in April 1938 the number of cases receiving commodities purchased and distributed by the Farm Security Administration is included.

*Amounts:* Data represent the net amount of emergency grant vouchers certified during the month for subsistence payments to cases as described above. Also included is the value of commodities distributed by the Farm Security Administration during the calendar month.

*Source:* Farm Security Administration.

| XVI. Expenditures of Federal and Sponsors' Funds on WPA-Operated Projects, by States and by Major Types of Projects—Year Ending June 30, 1939                  | 174  |
| XVII. Selected Items of Physical Accomplishment on WPA-Operated Projects, by States—through June 30, 1938                                                      | 176  |

## EXPLANATORY NOTES

The WPA employment data shown in various detail in the first tables of the appendix relate to persons employed on "WPA-operated" projects, to persons employed on "WPA-financed projects of other Federal agencies," or to a combination of the two comprising all WPA-financed employment. The first group, much larger than that of the other Federal agencies, includes workers on projects directly operated by the WPA. This series extends from August 1935 to date. The Federal agency group includes persons working on projects similar in type to those of the WPA and operated by other Federal agencies with WPA funds transferred under Section 3 of the Emergency Relief Appropriation Act of 1938. This series begins in July 1938. Project workers paid by sponsors of WPA projects are not included, nor are administrative employees of the WPA included in the project employment tables. In showing detail of employment the last Wednesday of the month, or quarter, has, in general, been used—the employment counts are taken as of Wednesday. The scope of the data presented in Table V which provides state distributions as to age, size of family, and duration of employment is described in footnote 2, page 101.

Tables VIII and IX are based upon reports of the Treasury Department and refer to moneys appropriated by the ERA Acts of 1935, 1936, 1937, and 1938 for relief and work relief programs. The period covered is from the beginning of operations, as early as April 1935 under some agencies, through June 1939. Certain of the terms that are used may be defined as follows:

1. "Allocations" represent amounts either directly appropriated by Congress or transferred by the President to an agency, warrants for which have been issued by the Treasury.

2. "Obligations" represent actual or contingent liabilities incurred against funds allo-

ated. The figures are cumulative and represent paid, as well as unpaid, obligations. Requisitions for materials, supplies, and equipment are set up as obligations when submitted. Items which are certain to become due in a short period are recorded in advance, e. g., payrolls, rents, travel expenses, etc., are obligated one period in advance.

3. "Expenditures" represent checks issued in payment of payrolls and other certified vouchers.

Neither obligations nor expenditures necessarily provide a wholly accurate reflection of operations at any given time since obligations in part reflect future operations and expenditures lag behind the current situation because of the time consumed in making actual payments.

Tables XI to XVI, dealing with expenditures of Federal and sponsors' funds on WPA-operated projects, are based on data compiled from WPA project registers maintained by the WPA divisions of finance in the states. Totals of Federal expenditures as shown in these records agree throughout with comparable Federal expenditures as reported by the Treasury Department; adjustments have been made to allow for small differences resulting largely from items in transit between WPA offices or between WPA and Treasury offices.

The state data on physical accomplishments on WPA-operated projects presented in Table XVII cover certain selected items of work. Totals reported in each instance relate to the physical units of work that were completed in the operation of projects from the beginning of activities through June 30, 1938. For further discussion of physical accomplishment data see the accomplishment section of the chapter on "WPA Project Accomplishments and Operations."

All data presented in this report are for the United States and territories, unless otherwise specified.

TABLE I. NUMBER OF PERSONS EMPLOYED ON WPA-OPERATED PROJECTS

WEEKLY AUGUST 1935 TO JUNE 1939

| Month     | 1935  |         | 1936  |           | 1937  |           | 1938  |           | 1939  |           |

a Transfers of WPA funds to other agencies under the ERA Act of 1938 are included in the respective agency amounts.

b Expenditures made by the PWA Housing Division on projects transferred to the U. S. Housing Authority are included in the Housing Division item.

c Includes the Bureau of Internal Revenue.

d Excludes \$1,277,162 not yet reimbursed to the work relief supply fund by agencies for which purchases have been made.

e Includes state work programs, Federal National-wide program, purchase of surplus clothing, and aid to self-help and cooperative associations.

f Excludes transfers under the ERA Act of 1938. Includes land utilization and rural rehabilitation programs administered by the Farm Security Administration and a project in Texas administered by the Bureau of Reclamation.

g Transferred from funds appropriated to the WPA and made available for Presidential allocation to Federal agencies.

REPORT ON  
PROGRESS OF  
THE WPA PROGRAM

JUNE 30, 1940

WORK PROJECTS ADMINISTRATION

F. C. HARRINGTON, Commissioner

CORRINGTON GILL, Assistant Commissioner

EMERSON ROSS, Director, Division of Statistics

## PREFACE

This report on the progress of the Work Projects Administration program continues the series of statements which have reviewed the employment, accomplishments, and expenditures of the WPA. The present report, like those preceding it, contains a summary of WPA activities in the fiscal year ending June 30, 1940, and certain special sections that provide more detailed accounts of particular aspects of the WPA program. The special sections cover WPA activities for strengthening national defense, a summary of WPA airport and airway work, and a brief review of operating policies and procedures. The five other sections of the report bring earlier accounts of major aspects of the WPA program up to date. They cover the employment supplied through the WPA, the accomplishments on project undertakings, the expenditures of Federal funds and of funds supplied by various state and local public agencies that propose and sponsor WPA projects, the legislative provisions for the current fiscal year, and the place of the WPA program among the public work and assistance programs in the United States.

# REVIEW OF THE WPA PROGRAM DURING THE FISCAL YEAR 1940

## WPA Employment in the Fiscal Year 1940

**T**HE Emergency Relief Appropriation Act of 1939 appropriated to the Work Projects Administration \$1,477,000,000, together with unobligated balances remaining from the previous year, to provide employment on useful public projects during the year ending June 1940. This appropriation represented a reduction of about a third from the amount that had been made available for the operation of the WPA program during the preceding fiscal year. During the 12-month period covered by this appropriation, the number of workers employed on WPA projects averaged approximately 2,054,000 per month, as compared with an average employment of 3,014,000 during the preceding 12 months.

The last half of the preceding fiscal year was marked by improvement in private industry and a downward trend in unemployment. In line with the increase in opportunities for private employment the number at work on the WPA program had been reduced steadily from a peak of 3,335,000 in the fall of 1938 to 2,578,000 in June 1939. The appropriation for the fiscal year 1940 anticipated a continuation of improvement in economic conditions.

Industrial production increased throughout the summer and the rate of increase was accelerated after the outbreak of hostilities in Europe in September. However, many industries had accumulated large inventories by the end of 1939 and, as a result, industrial production was

reduced sharply in January and February, offsetting much of the expansion that had been generated by anticipation of increased war business. More than 1,000,000 nonagricultural workers lost their jobs during the month of January. This short but severe contraction was followed by relatively small increases in private employment which began in March and continued throughout the remainder of the fiscal year. These increases were not sufficient to offset the January–February setback, and in June 1940 total private employment was at a level lower than it had been in October 1939.

Except for the normal seasonal increase during the winter months, when unemployed workers are most in need of jobs and wages, WPA employment followed the general trend of business activity and private employment. From the June 1939 average of 2,578,000 workers, the number at work on the program was reduced during the summer by 857,000 to 1,721,000 during September. The rate of this reduction (about 33 percent) was much more rapid than the rate of decrease in unemployment, which amounted to less than 10 percent during this period.

Because of the seasonal increase in applications for WPA jobs, average employment on the program increased after September by about 130,000 workers per month to 2,123,000 in December 1939. Seasonal factors together with the rapid decline of private employment in January and February necessitated further

additions to the program, and the number employed averaged approximately 2,310,000 in February and March.

A general reduction of about 554,000 in the number of WPA jobs during April, May, and June coincided with seasonal increases in farm employment and the gradual improvement in the number of jobs available in other private industry. The extent of the reduction, however, was determined largely by the amount of funds available for the program. The 280,000 voluntary separations from the program which occurred in these three months were equivalent to about one-half of the total decline in WPA employment.

### WPA Employees

Nearly 97 percent of all project workers during the fiscal year were eligible for WPA employment on the basis of their relative need for work. The remaining 3 percent represent supervisory, technical, and other key personnel whose services were necessary to permit project operations but whose jobs could not be filled from the available list of certified eligible workers. The relative need of applicants is determined locally. Lists of eligible workers

are referred to the WPA by public welfare agencies and those most in need of employment are selected for WPA jobs. The need of workers assigned to jobs is reviewed periodically. Workers are required by the WPA to accept offers of private employment, and they lose their eligibility if they refuse such offers.

About 84 percent of the workers employed on projects during fiscal 1940 were men and 16 percent were women. The WPA employs only one worker from any family. That worker usually is the family head or the most employable member of the family group.

Out of every 100 workers employed on projects in fiscal year 1940, about 3 were project supervisory employees; 3 were assigned to professional or technical project work; 10 were skilled workers, such as bricklayers, cement finishers, or operators of heavy equipment; 14 were intermediate or semiskilled workers, such as carpenters' helpers, truck drivers, and operators of light equipment; and 70 were assigned to unskilled manual work.

### Type and Location of Projects

Practically all WPA projects are planned and initiated by local public agencies. Job speci-

WPA workers paving Harding Boulevard in San Francisco

fications and cost estimates are prepared locally and submitted to the WPA for technical review and approval as to suitability for operation. A condition of this approval is that the project shall develop useful facilities or benefits to the public. A further condition is that the work shall not replace a regular function of the local government, or displace persons who would normally be employed on similar work. A steady flow of project applications from local communities provides the WPA with a large reservoir of available projects which can be brought into operation quickly. This is essential to flexibility of program operations, enabling rapid expansion in employment when that is necessary and permitting the selection of projects on which the particular skills of available workers can be used to best advantage.

At the end of June 1940, projects for the construction or improvement of highways, farm-to-market roads, and city streets provided 43 percent of all WPA jobs. Ten percent of the workers employed at that time were on projects involving water supply and sewer systems, and 9 percent were at work on projects for the construction and renovation of schools and other public buildings. Sewing projects, on which a large number of women were engaged in the production of garments for distribution to needy families, accounted for 7 percent of total employment at the end of June. The remainder of the workers were employed on a wide variety of activities including the extension of recreational facilities; the construction of airports and airway facilities; land and water conservation; malaria control and other sanitation work; the teaching of subjects related to literacy, naturalization, art, music, and other fields and various other educational activities; research projects and work on public records; indexing and cataloging projects in libraries and museums; serving lunches to undernourished school children; and other kinds of work related to many different community services and public facilities.

About 40 percent of the workers employed on the WPA program at the end of June 1940 were working in counties in which there is a city with a 1930 population of 100,000 or more; 16 percent were in counties having cities ranging between 25,000 and 100,000 in population; 23

percent worked in counties in which the largest town had between 5,000 and 25,000 inhabitants; and 21 percent were in rural counties having no towns with as many as 5,000 inhabitants.

Although, in general, the distribution of WPA employment reflects the concentration of population in urban centers, the need for WPA employment is not necessarily related directly to the total population of any area. Wide variations in unemployment and need occur in cities of approximately the same size because of differences in types of industries, the regularity of the employment provided in those industries, the growth or decline of certain industries, and related factors. Furthermore, an unemployed worker's need for a job is likely to be relatively more intense in an urban area, where the family depends on money income for subsistence, than in rural areas where subsistence is possible for some families without much actual cash.

### Relation of WPA Employment to Unemployment

Only a fraction of the total number of workers who do not have private jobs can be employed by the WPA. Within the limits of available funds, employment is provided for those workers who are most urgently in need of it.

The need for WPA employment is related basically to the total volume of unemployment, but because of a number of factors this relationship is not necessarily constant from month to month or from year to year. The relative need of an unemployed worker and his family at any given time is determined by the amount of his savings and the length of time he has been out of work. Some workers are able to accumulate more than others and so can provide for their families without outside help for longer periods. Some families can be supported by relatives for at least a short period after the family head loses his job. Some unemployed workers are eligible for unemployment compensation payments. Some are members of families in which another worker has employment. Those with no resources whatever need some form of public assistance as soon as they are thrown out of work. In general, the relative proportion of the unemployed workers who are in need increases as the average period of unemployment for the entire group lengthens.

The need for fuel and clothing and other items that must be purchased, and therefore the need for jobs and wages, increases during the winter months, causing an important seasonal factor in the relationship between unemployment and WPA employment. The winter increase in need is intensified by simultaneous increases in the total number of persons out of work, because of the curtailment of outside construction and of other enterprises during cold weather.

Another important factor affecting the relationship between the number of workers seeking WPA employment and the total number unemployed is the need which exists among rural and farm families. A tenant farmer, for example, is technically excluded from a count of unemployed workers, although his need for a job may be fully as intense as that of an industrial wage worker.

Droughts that cut off farm income, and other disasters and emergencies, such as hurricanes or floods, that have no relation to employment or previous need, have necessitated rapid expansion of WPA employment at various times, further modifying its relationship to total unemployment.

The proportion of the unemployed workers who are provided with WPA employment has declined since 1936. On the basis of the estimates of the National Industrial Conference

Board, the ratio declined from 33½ percent during the calendar year 1936 to 28 percent during 1937, 27 percent during 1938, and 26½ percent during the calendar year 1939. During the first half of the calendar year 1940, the ratio was 23½ percent. The decline in the ratio is accounted for in part by the operation of the unemployment compensation program and by other factors affecting the proportion of the total number of unemployed workers in need. In part, it is an indication of the changing proportion of the need for employment that the WPA program has met.

### Turnover in WPA Employment

The volume of turnover in employment on WPA projects continued to be large during fiscal 1940, despite the fact that the level of employment was reduced by one-third from that of the previous fiscal year. While this reduction was in process about 3,850,000 separations occurred and more than 3,000,000 assignments were made, including replacements and additional assignments during the winter peak period. About 1,150,000 of the separations were voluntary, most of them representing persons known to have left the program to take private jobs. WPA employment has assisted these workers in maintaining work habits and skills, and they have been able to qualify for new jobs in private industry when employment conditions have improved.

A continuous movement of workers from the program and their replacement by other workers from the certified lists has characterized the operation of the program. To insure the continuation of this process and to shorten the period during which certified eligible workers have to wait for WPA jobs, the ERA Act of 1939 provided that no workers, except veterans, should be retained in WPA employment continuously for more than 18 months. At the expiration of 18 months of continuous employment, WPA

CHART 1  
ESTIMATES OF UNEMPLOYMENT  
January 1936 - June 1940

\*Monthly data through 1938 are not available

workers are automatically discharged and cannot be recertified for a period of at least 30 days.

The initial application of the 18-month provision resulted in the separation of over 780,000 workers from the program during the first two months of the fiscal year. This large forced addition to the normal volume of separations did not result in widespread reentry into private employment of those separated. Only about 13 percent of the workers discharged during the first two months of the application of the 18-month provision (July and August) were able to find private employment during the next four months; in many cases they were hired at wages considerably less than those paid on the WPA program. The great majority of them were forced to apply for public aid and await their turn for reassignment to WPA jobs. However, this forced rotation of jobs enabled the WPA to provide employment for hundreds of thousands of other workers who had previously been awaiting assignment.

After August 1939 the number of workers discharged under the 18-month provision declined steadily. During June 1940, less than one-half of 1 percent of all the workers employed on WPA projects were discharged because they had been employed under the program continuously for 18 months.

## Earnings and Hours of Work

During the fiscal year 1940 the full-time rate of monthly earnings for all WPA workers averaged about \$57.50. This represents the average of the full-time rates of individual workers as determined by an established schedule of monthly earnings. Standard monthly wages are paid in accordance with the skill required for the job to which the worker is assigned. These standard wages vary only according to the degree of urbanization of the various counties, as determined by the population of the largest municipality in the county, and according to the location of the county in one of the three wage regions into which the country has been divided (Chart 14, page 81). The ERA Act of 1939 specified that regional differentials in wages paid for similar kinds of

work should be no greater than differentials in living costs.

The full-time monthly wage for the unskilled employees varies from \$31.20 in the rural counties of the southern wage region to \$57.20 in the metropolitan areas of the North and West. Intermediate or semiskilled workers receive between \$42.90 and \$68.90. The corresponding rates for skilled workers vary from \$54.60 to \$89.70. Professional and technical workers receive the highest rates paid to certified employees, which range from \$55.90 per month in the rural counties of the South to \$94.90 per month in northern and western cities.

The monthly rates of pay under the earnings schedule have been established at a level below the monthly wage prevailing for similar work in private industry. This prevents competition with private employers for the services of unemployed workers and provides an incentive to WPA workers to accept private jobs. On the other hand, the standard payment is intended to meet minimum subsistence requirements for a family of average size during the interval of the family's emergency, when none of its gainful workers has other employment.

In order to facilitate the scheduling of project operations and to increase the efficiency of project activities, a standard work month of 130 hours was established by the ERA Act of 1939. Maximum hours were set at 8 in any one day and 40 in any week, except in the case of disasters, emergencies, and certain specifically exempted projects which may require deviations from these standards.

## Expenditures

The total cost of operating the WPA program is directly related to the number of workers employed. Expenditures from funds appropriated to the WPA totaled \$1,520,106,000 for the fiscal year 1940. Wage payments to project workers aggregated \$1,339,194,000, or 88 percent of the total. In addition to the wage payments, a limited amount of WPA funds has been made available for nonlabor project costs, such as the purchase of materials and supplies and the purchase or rent of equipment, in proportion to the amount of employment provided. Under the ERA Act of 1939 this nonlabor allowance

was limited to \$6 per worker per month in any state. During the fiscal year expenditures for these nonlabor costs amounted to \$125,534,000, or 8 percent of the total amount expended from WPA funds.

Administrative costs totaled \$55,331,000, or 3.6 percent of total WPA expenditures, and miscellaneous costs, including the settlement of property damage claims and special grants for disaster relief, accounted for the expenditure of \$47,000.

Operations supervised directly by the WPA accounted for \$1,461,790,000 of the total WPA expenditures (\$1,520,106,000) made during the year. The remaining \$58,316,000 was expended from funds allocated to other Federal agencies for the operation of WPA projects.

As part of their sponsorship of WPA projects, state and local agencies have provided substantial sums to supplement Federal expenditures. They have been required to meet engineering and other costs associated with the planning of the work. The sponsors have also supplemented the Federal allowances for project nonlabor costs by providing additional funds for materials, supplies, and equipment. The amount of such supplementation has varied depending upon the type of facility or service which the communities have desired and their financial ability.

The ERA Act of 1939 provided that sponsors must meet at least 25 percent of the total costs of all state or locally sponsored projects approved and placed in operation after January 1, 1940. Between January 1 and June 30, 1940, projects representing an aggregate cost of \$1,005,323,000 were approved. The sponsors of these projects had pledged varying portions of the cost of the individual projects, but their combined pledges amounted to \$313,752,000, or 31 percent of the total cost.

The total amount of funds expended by sponsors of projects operated by the WPA has increased each year since the program began, and the ratio of sponsors' expenditures to total expenditures also has increased since the first years of the program. During the fiscal year 1940, sponsors expended \$494,378,000, or 26 percent of the total cost of all projects operated by the WPA. In comparison, 19 percent of the total cost was met by sponsors in the fiscal year

1939, 21 percent in 1938, 15 percent in 1937, and 10 percent in the fiscal year 1936, the first year of WPA program operation. The increase in sponsors' financial participation in WPA operations has facilitated improvement in the quality and value of the work which has been done under the program.

Altogether, a total of \$1,902,950,000 from WPA and sponsors' funds was expended for the operation of work projects by the WPA during the fiscal year 1940. Of the total expenditures, highway, road, and street projects accounted for about 42 percent; public buildings, 10 percent; parks and other recreational facilities, 6 percent; water supply and sewer systems, 11 percent; airports and airways, 2 percent; land and water conservation, 3 percent; sanitation, health, and other construction projects, 3 percent; adult education projects, 2 percent; sewing projects, 6 percent; art, music, writing, library, and museum projects, 3 percent; and various other types of professional and service projects, 12 percent.

### WPA National Defense Projects

Legislation enacted in June 1940 enabled the WPA to expand work on national defense projects of the kind that it had been operating since the beginning of the program. A large number of WPA projects for the construction and improvement of facilities of military and naval agencies already had been completed by the end of June 1940. In conformity with provisions of appropriation acts the WPA does not manufacture munitions or implements of war, but it has constructed many types of facilities for military and naval agencies including barracks, garages, warehouses, training fields, rifle ranges, administrative buildings, armories, roads, water mains, sewer lines, and other structures at military and naval posts. These projects have been sponsored or operated by the War Department, the Department of the Navy, the Coast Guard, and the National Guard.

WPA workers have also completed extensive improvements at most of the military, naval, and municipal airports in the United States. About 1,600 hangars and other buildings and 2,600,000 feet of runways had been constructed

and improved through the operation of WPA projects by the end of June 1940.

An expansion of WPA work on these and similar national defense projects was undertaken just before the close of the fiscal year 1940. Special procedures have since been initiated to facilitate the review and approval of projects related to national defense, and these projects will be given priority in the assignment of workers and in other respects.

Special provisions of the ERA Act, fiscal year 1941, permit greater use of the WPA program as a means of strengthening the country's defenses. Several restrictions that ordinarily apply to the operation of WPA projects have been waived by law to expedite the operation of projects certified by the Secretary of War or the Secretary of the Navy as important for military or naval purposes. Such projects are exempted from the limitation of WPA Federal expenditures for nonlabor purposes to a maximum of \$6 per worker per month. They are also exempted from the provision which requires that sponsors provide at least one-fourth of the total cost of non-Federal projects approved in each state after January 1, 1940.

Exemptions from other statutory provisions have been authorized in connection with certified military and naval projects.

In the Second Deficiency Appropriation Act of 1940, the Congress gave special authority to the WPA to operate projects for training workers in occupations required for industries engaged in production for national defense purposes. Under this authority a project, sponsored by the Advisory Commission to the Council of National Defense and cosponsored by the Office of Education, was initiated in June 1940 to operate vocational training programs in schools in every state. In these schools workers selected from WPA files and other workers from registration lists of public employment offices are being trained in skilled trades and crafts that are essential to the coordinated production of materials and goods for defense purposes.

### Accomplishments of the WPA

The accomplishments of the WPA program can be evaluated in various ways, in accordance with its various purposes. Of first importance is the total number of jobs that the WPA has

Thousands of persons enjoy this WPA-built aquatic park and the recreational facilities it provides

provided. Since the beginning of the program about 7,800,000 different individuals have worked more than 130,000,000 man-months on WPA projects. This statistical fact can be translated in terms of the economic value of individual workers' skills and the maintenance of the total labor resources of the country. It can also be translated in terms of payments to landlords and grocers or of the preservation of health and morale in the families of the Nation's productive workers.

Another purpose of the WPA program is to bring together the productive capacity of unemployed workers, whose individual needs must be provided for, and the needs of the community as a whole, which cannot be met if the labor of these workers is not put to use. Through the WPA program public resources, that otherwise might have been used to support a considerable part of the working population in idleness, have been directed into the construction and improvement of essential public facilities and the provision of useful public services.

The types of work that WPA employees have accomplished and the value of their contribu-

tion to the communities throughout the country have been determined primarily by the nature of the projects that the communities themselves have planned and proposed. The statistical record of work completed on WPA projects is an indication, rather than a complete measure, of the contribution which the program has made to the physical assets of the Nation.

The most extensive accomplishment of WPA workers has been the construction and rebuilding of secondary and farm-to-market roads. Work completed on all highways, roads, and streets from the beginning of the program through December 31, 1939, exceeded 470,000 miles, and 412,000 miles of this represented work done on rural roads. Roads that were impassable during bad weather have been straightened, graded, drained, and surfaced, bringing about a vast improvement in the accessibility of markets, shops, schools, and medical and other vitally important services to hundreds of thousands of farm families. Road improvement work also has included the replacement or reconstruction of outworn or unsafe bridges, culverts, and viaducts. In all, the WPA program has built or reconditioned nearly 856,000 structures of these types. The construction and reconstruction of drainage facilities and roadside clearance work on more than 100,000 miles of highways have been an essential part of these activities. Through its highway program the WPA has made an important contribution to the safety and convenience of highway travel.

WPA workers have constructed or improved almost 90,000 public buildings, including schools, libraries, garages, storage buildings, town halls, and other administrative buildings. The overcrowding, obsolescence, and unsafe conditions that have prevailed in thousands of school buildings have frequently been pointed out by local and national educational authorities. There has been a large demand for the construction and modernization of school buildings through WPA projects, and work has been completed on more than 30,000 of them.

WPA workers have conducted literacy, naturalization, vocational training, and other adult education classes in which the enrollment has totaled millions of persons. Art and music instruction classes as well as art and music

Road through Parley's Canyon (Utah) constructed by WPA workers

A concert of the Colorado WPA Symphony Orchestra

production projects for the benefit of the public have been an integral part of the educational activities of the WPA, as have the library units built, operated, or assisted, the millions of volumes of public library books renovated, and the cataloging projects for modernizing library record systems.

The need for improvements in public utility systems and in sanitation and public health facilities is evidenced by the volume of work of these kinds that has been planned and sponsored by state and local agencies. WPA workers have built or improved 12,000 miles of water mains and distribution lines and 18,000 miles of storm and sanitary sewers. Malaria control has been greatly advanced by drainage work done on 3,500,000 acres of swamp land. In rural areas, mostly in the hookworm and typhoid "belts," 1,760,000 sanitary privies have been constructed.

The inadequacy of hospital and clinic facilities in many localities has been attested by public health authorities. Forty percent of the counties in the United States have no registered general hospitals, and the structure and equipment of many existing hospitals are both inadequate and obsolete. The WPA has rebuilt

and modernized 1,500 hospital buildings and has built 132 new hospitals. Projects for the operation or assistance of medical and dental clinics, for nurses' visits, and for home treatments have been conducted in cooperation with local agencies. In a typical two-week period in January 1940, nearly a quarter of a million persons were examined and treated in health clinics with the assistance of WPA workers.

Projects for serving lunches to undernourished school children from needy families are closely related to other WPA welfare activities. On one day in January, 1,018,000 lunches were served in 11,000 schools throughout the country. From the beginning of the program through December 31, 1939, WPA workers served a total of 384,000,000 lunches.

These examples illustrate the variety and extent of public work that has been done through the WPA program. The complete list includes parks, playgrounds for children, airports for the national transportation system and for the national defense, soil and water conservation, flood control, reforestation, and many other kinds of development of properties in which the public has an interest and an investment.

# PROVISIONS FOR THE WPA PROGRAM DURING THE FISCAL YEAR 1941

**P**ROVISIONS for the operation of the Work Projects Administration program during the year ending June 30, 1941, are contained in the Emergency Relief Appropriation Act, fiscal year 1941.<sup>1</sup> This act in general continues the provisions made in the previous year's act, which was cited as the Emergency Relief Appropriation Act of 1939. The new legislation differs chiefly in the provisions designed to facilitate cooperation of the WPA in measures to strengthen the national defense and in the allowances made for unforeseen changes in the trends of business activity and unemployment during a period of world-wide instability and economic uncertainty.

The European war with its economic repercussions on the industrial life of the United States has made it extremely difficult to forecast with any degree of accuracy the extent of the unemployment problem and of relief needs for a period as long as a year. War orders of foreign nations as well as national defense expenditures tend to be concentrated in a few key industries, such as aircraft, machine tools, shipbuilding, and steel. Employment resulting from these activities, therefore, will undoubtedly be concentrated to a large extent in specialized skilled trades. Other skilled groups and unskilled workers probably will not be affected directly, and the indirect effects are not susceptible to accurate estimation at this time. Exports to many parts of the world have already been stopped, and there exists a very definite

threat that further economic dislocation in the world may continue to affect American industries seriously and to throw many people out of work. Faced with uncertainty as to the economic outlook for the next year, Congress granted the President authority to apportion the WPA appropriation for a lesser period than the 12 months of fiscal year 1941, if in his judgment unemployment conditions necessitate such action. The apportionment may not, however, be for less than 8 months.

## Appropriation to the WPA

The ERA Act of the fiscal year 1941<sup>2</sup> appropriates to the WPA the sum of \$975,650,000 together with the unobligated balances of funds made available to the WPA by the ERA Act of 1939. This appropriation represents a reduction of approximately one-third from the amount made available for the 1940 fiscal year. If unemployment conditions in the country are such as to require the expenditure of this amount

---

<sup>1</sup> The ERA Act, fiscal year 1941, also made funds available to other agencies as follows: \$50,000,000 to the Farm Security Administration; \$4,000,000 to the Puerto Rico Reconstruction Administration; \$1,700,000 to the Bureau of Indian Affairs; \$16,611,357 to various administrative agencies (General Accounting Office, Treasury Department, Public Health Service, and the Civil Aeronautics Authority) to carry out the purposes of this act; \$750,000 to the Office of Government Reports; \$50,000,000 for war relief through the American Red Cross or other agencies; and \$50,000,000 for the Agricultural Adjustment Administration. These bring the total appropriations made under this act to \$1,157,711,357. In order to furnish the Secretary of Agriculture with additional funds with which to make rural rehabilitation loans to needy farmers the Reconstruction Finance Corporation is authorized and directed by this act to make advances up to \$125,000,000 to the Secretary for that purpose.

<sup>2</sup> Public Resolution No. 88, 76th Congress, approved June 26, 1940.

in the first 8 months of the fiscal year, the funds appropriated will be sufficient to maintain the WPA program at about the same level as in the previous year with an average monthly employment of nearly 2,000,000 persons. Apportionment over all 12 months of the year would necessitate limiting average monthly employment to about 1,300,000 persons.

The financing of work important for national defense is facilitated by the authority granted to the Commissioner in the new act to use an amount not exceeding \$25,000,000 to supplement the amounts authorized for nonlabor costs in connection with the prosecution of projects which have been certified by the Secretary of War or by the Secretary of the Navy as being important for military or for naval purposes. This proviso will permit the sponsoring of many projects for the construction of airports, armories, and other facilities of military usefulness by state and local agencies that would otherwise be unable to provide adequate financial assistance to make possible the prosecution of such undertakings. It should be noted that the extent to which Federal funds may be used for nonlabor purposes is fixed by another section of the act.

WPA expenditures for administrative purposes are limited by the new act as they were by the ERA Act of 1939. If the total appropriation is spread over the 12 months of the fiscal year, up to \$41,534,000 may be spent for administration. If it is apportioned for an 8-month period, however, the amount that may be used for administrative expenses is \$39,875,000. In the event that the appropriation is used for a period of less than 12 months but more than 8, the Director of the Bureau of the Budget is authorized to apportion the amount that may be used for administration. The fixed limitations for the 12- and 8-month periods are 4.3 percent and 3.2 percent, respectively, of the total appropriation to the WPA and represent a substantial reduction from the maximum of \$53,950,000 set for the previous year. In addition to the limitation on the total administrative expenditures, definite restrictions have been placed on the amounts that may be expended for salaries, communication service, travel, and printing and binding under the two alternative limitations.

As in the previous WPA appropriation act, provision has been made in the new act for allocations of WPA funds to other Federal agencies for expenditure on projects which are similar in type to those operated by the WPA. The act authorizes the Commissioner of Work Projects to allocate up to \$40,000,000 to other Federal agencies for the operation of such projects, with the restrictions that not more than 4 percent of the total allocation to any agency may be used for administrative purposes and that at least 90 percent of the total workers are certified as in need of relief. The \$40,000,000 is only two-thirds as large as the amount authorized for transfer in the previous year, but it represents about the same proportion of the total WPA appropriation.

Several other relatively minor restrictions have been placed on the use of funds appropriated to the WPA. The amount of funds that may be used for radio broadcasting is limited by the act to \$100,000, and no funds may be devoted to the acquisition, rental, or distribution of motion-picture films.

### Types of Projects

The funds appropriated to the WPA under the ERA Act, fiscal year 1941, are available for administration; for the prosecution of Federal and non-Federal public projects subject to the approval of the President; and for the prosecution of projects previously approved by the President under the provisions of the ERA Acts of 1937, 1938, and 1939. In the specification of the types of projects that may be prosecuted<sup>3</sup>

<sup>3</sup> Section 1 (b) enumerates the following types of projects: "Highways, roads, and streets; public buildings; parks, and other recreational facilities, including buildings thereon, public utilities; electric transmission and distribution lines or systems to serve persons in rural areas, including projects sponsored by and for the benefit of nonprofit and cooperative associations; sewer systems, water supply, and purification systems; airports and other transportation facilities; flood control, drainage; irrigation, including projects sponsored by community ditch organizations; water conservation; soil conservation, including projects sponsored by soil conservation districts and other bodies duly organized under state law for soil erosion control and soil conservation, preference being given to projects which will contribute to the rehabilitation of individuals and an increase in the national income; reforestation, and other improvements of forest areas, including the establishment of fire lanes, fish, game, and other wildlife conservation; eradication of insect, plant, and fungus pests; the production of lime and marl for fertilizing soil for distribution to farmers under such conditions as may be determined by the sponsors of such projects under the provisions of state law; educational, professional, clerical, cultural, recreational, production, and service projects, including training for nursing and for domestic service; aid to self-help and cooperative associations for the benefit of needy persons; and miscellaneous projects."

two minor changes have been made from the list of eligible types contained in the previous act. First, the types of conservation projects have been specified and divided into groups such as water conservation, soil conservation, forest conservation, and fish, game, and other wildlife conservation. The only change made by this specification in the types of projects permissible for operation is the extension of the class of irrigation projects to include those sponsored by community ditch organizations. The other change involves the specific addition of a new type of training project to the kinds of work that may be carried on; training for nursing may now be given as well as the training for domestic service that was permitted under previous acts.

Training projects eligible for prosecution by the WPA have been further extended to include the training of workers for manual occupations in industries engaged in production for national defense purposes. This provision, however, was not contained in the current ERA Act, but was added to the eligible project list by means of an amendment made by subsequent congressional action.<sup>4</sup> Such projects will serve the dual purpose of providing jobs for unemployed workers and, at the same time, of furnishing training which will equip them to secure employment in industries which are vital to the national defense.

Certain types of projects are specifically made ineligible under the fiscal year 1941 Act. None of the funds made available by this joint resolution are to be used for the operation of any theatre project or for the operation of any project sponsored solely by the WPA. Neither may funds be devoted to the establishment or expansion of mills or factories which produce articles for sale in competition with existing industry; to the manufacture, construction, or purchase of naval vessels, armaments, or munitions for military or naval forces; or to work on penal or reformatory institutions, unless the President finds that the projects will not promote the competition of products of convict labor with products of free labor.

Several kinds of restrictions are imposed on the operation of permitted types of project

activity. None of the funds appropriated to the WPA may be used for the construction of any Federal or non-Federal building that would require more than \$100,000 of Federal funds. This is to be compared with similar limitations in the previous act which restricted Federal funds to \$50,000 and \$52,000 for Federal and non-Federal buildings, respectively. Projects certified by the Secretary of War and the Secretary of the Navy as being important for military or naval purposes are exempted from this provision. Also exempted are non-Federal buildings for which the project was approved by the President prior to May 16, 1940, for which an issue of bonds was approved at an election held prior to that date, or for the completion of which funds have been allocated and irrevocably set aside under prior relief appropriation acts. It is also specified that no Federal construction project, with the exception of flood control and water conservation projects authorized under the law, can be prosecuted until funds sufficient for its completion are irrevocably set aside.

### Financing of Projects

The fiscal year 1941 Act continues the requirement initiated in the preceding act that sponsors must furnish not less than 25 percent of the total cost of all non-Federal projects undertaken in any state that were approved for operation after January 1, 1940. This provision does not mean that at least one-fourth of the cost of each project must be borne by its sponsor, but applies to the total cost of all such projects in each state. Exemption from this requirement is made in the case of projects which have been certified as being important for military or naval purposes or projects which authorize necessary temporary measures to avert danger to life, property, or health in the event of disaster or grave emergency.

Sponsors of non-Federal projects (except the Puerto Rico Reconstruction Administration) are required, as under the previous act, to enter into a written agreement to finance such part of the entire cost thereof as the Commissioner of Work Projects determines is an adequate contribution, after taking into consideration the financial ability of the sponsor. The Commissioner is authorized to prescribe rules

<sup>4</sup> By the Second Deficiency Appropriation Act, 1940 (Public, No. 668, 76th Congress), approved June 27, 1940.

and regulations relating to the valuation of sponsors' contributions in kind, to which an actual cash value can be assigned. Credit may be allowed, however, only to the extent that the furnishing of such contributions represents a financial burden to the project sponsor.

The nonlabor cost restriction—a provision that, along with the 25 percent sponsors' requirement, serves as a control over the amount of sponsors' contributions—is continued under the fiscal year 1941 Act as under the previous act. This limits the Federal expenditure authorizations for nonlabor costs in any state to an average of \$6 per month per worker for the fiscal year. In cases where the increased cost of materials would have the effect of raising this average above \$6 the Commissioner of Work Projects may authorize an increase in the limitation up to as much as \$7 to offset the rise. Funds authorized for nonlabor costs may not be used to purchase construction equipment or machinery if such equipment can be rented at reasonable prices (as determined by the Commissioner). Also, as mentioned earlier, an amount not to exceed \$25,000,000 may be used by the Commissioner to supplement the amounts authorized for nonlabor costs in connection with the prosecution of projects which have been certified as being important for military or naval purposes.

The 1941 Act contains a new provision stipulating that when it is found that public projects have been sold or disposed of for private use, as a result of bad faith, fraud, or misrepresentation on the part of the sponsor, the sponsor and the transferee are made liable to the United States jointly and severally for the amount of Federal funds expended on the project.

## Monthly Earnings and Hours of Work

The fiscal year 1941 Act continues the 130-hour work month and the security wage provisions under which the WPA has operated during the 1940 fiscal year.<sup>5</sup> The Commissioner may authorize the exemptions from the limitation on hours of work and monthly earnings that were permitted under earlier acts to protect work already done on a project, to permit making up

lost time, to meet emergencies involving the public welfare, and to permit flexibility in the hours and earnings of supervisory personnel employed on work projects. Under the new act he may also authorize exemptions of persons employed on projects certified as being important for military or naval purposes and, at his discretion, may require a lesser number of hours and correspondingly lower earnings of certified workers with no dependents.

## Labor and Employment Provisions

In general the employment provisions of the previous act are continued in the fiscal year 1941 Act. These provisions deal with eligibility for employment, criteria for priority in assignment, certification procedures, the period of continuous employment, and other regulations affecting the WPA worker in his project employment.<sup>6</sup>

Some requirements, however, were modified slightly and a few new provisions were introduced. Preference in employment formerly granted only to veterans was extended to unmarried widows of veterans and wives of veterans who are unemployable and in need. Discharged draft enrollees without service-connected disability are not considered as veterans. Exemption from the requirement that all relief workers who have been continuously employed on WPA projects for more than 18 months must be removed from such employment for at least 30 days and their eligibility recertified before they can be restored to employment is extended to include unmarried widows and wives of veterans in addition to the veterans themselves. A new provision specifies that blind persons receiving aid under the Social Security Act shall not be prohibited from temporarily relinquishing such aid in order to accept employment on a WPA project.

The previous act's restriction against providing employment for aliens was extended in the 1941 Act to apply to Communists, members of any Nazi Bund organization, or any person who advocates, or is a member of an organization which advocates, the overthrow of the Government of the United States. An affidavit

<sup>5</sup> The wages and hours provisions are described in detail in another section of this report, pp. 83 to 85.

<sup>6</sup> Employment regulations applicable during the fiscal year 1940 are described in another section of this report, pp. 81 to 83.

regarding citizenship and membership in any of the above groups is required from all persons receiving funds under this act, and such an affidavit is to be considered *prima facie* evidence in this respect. Another change was made in connection with the requirement that the need status of relief employees on work projects be investigated at least once in every 6 months by WPA; the 1941 Act requires an investigation once every 12 months.

### **Other Provisions of the Act**

A new provision of the fiscal year 1941 Act permits WPA appropriations to be used for the provision of medical and hospital facilities for employees in work camps and for burial expenses and transportation of remains of deceased employees. Deductions are to be made from the earnings of all work camp employees in amounts estimated to be sufficient to offset

the expense to the United States resulting from the provision of these services.

The usual provisions concerning the financial aspects of the program are continued under the new act. These provisions relate to receipts and collections, revolving funds, purchases amounting to less than \$300, items allowable as administrative expenses, property damage claims, and the submission of required reports to the Congress. Other provisions which remain unchanged refer to employees' compensation, authority to prescribe rules and regulations, specifications concerning appointment and separation of administrative employees, cooperation of the Commissioner with the various state and local governments on the unemployment problem, prohibition of the promising of employment as a reward for political activity, political solicitation, political activity of employees, and prohibition of compensation to candidates for public office.

# THE WPA AND NATIONAL DEFENSE

**L**EGISLATIVE action following the President's messages to Congress requesting a rapid enlargement of the program of national defense has been chiefly concerned with appropriations for the equipment, supplies, and personnel required by the Nation's armed forces. It also has extended to the work of other governmental agencies whose activities are directly related to the defense program. These agencies, while continuing their normal work, have been directed and authorized to assume various new functions in the interest of national defense. Coordination of this work is a primary function of the Advisory Commission to the Council of National Defense, created in May 1940 under authority of the Act of August 29, 1916.

The Work Projects Administration is one of the Federal agencies that are cooperating in the preparedness program. The function of the WPA continues to be that of furnishing jobs on useful projects to workers in need of employment; but at the same time, as much as possible of the available manpower of WPA workers will be devoted to projects which will strengthen the country's defenses. To facilitate the operation of projects of military and naval importance, the Congress incorporated a number of special provisions in the Emergency Relief Appropriation Act for the fiscal year 1941.

Much of the work that had already been accomplished through the operation of WPA projects before this legislation was enacted is of considerable importance to effective defense. The roads and bridges, many of the buildings, and numerous other facilities constructed or improved through project activity during the first

five years of the program were not originally undertaken as protective measures but serve that purpose to a great extent. However, some WPA work, such as that sponsored or operated by the War Department and the Department of the Navy, was designed specifically for defense purposes. A review of WPA accomplishments that are of particular value in the preparedness program is presented at the close of this section following a discussion of the plans for expanding defense work during the coming fiscal year.

## Legislation Facilitating Operation of WPA Defense Projects

The Emergency Relief Appropriation Act, fiscal year 1941, contained a number of specific provisions intended to permit greater use of the WPA program as a means of strengthening the country's defenses. The act exempts all projects certified by either the Secretary of War or the Secretary of the Navy as being important for military or naval purposes from certain general statutory regulations applicable to other WPA projects. These exemptions became effective July 1, 1940.

Work of importance to defense plans, such as the construction of civil airports located in strategic areas, barracks, National Guard armories, and similar facilities, frequently involves nonlabor costs which project sponsors would be unable to finance without more Federal assistance than the \$6 per worker per month ordinarily permitted by law for nonlabor purposes.

Financing of such work under certified defense projects was facilitated by an authorization permitting the supplementation of the usual Federal nonlabor allowance in amounts not to exceed a total of \$25,000,000.

Certified defense projects were exempted from the requirement that in each state 25 percent of the total cost of all non-Federal projects approved after January 1, 1940, must be met by the state or its political subdivisions. The \$100,000 limitation placed on WPA expenditures for work on any public building was also waived in the case of certified defense projects, thus making possible the construction of many airplane hangars, military hospitals, and other buildings desirable for defense purposes, which would have been prohibited under the regulations governing regular projects. An additional aid to the prosecution of defense projects is a provision permitting exemp-

tions from the regular schedule of monthly earnings and hours of work.

WPA's participation in still another type of defense activity was authorized by the Second Deficiency Appropriation Act of 1940. A provision of this act specifies that WPA funds appropriated by the Emergency Relief Appropriation Act, fiscal year 1941, may be used for the training of workers "for manual occupations in industries engaged in production for national defense purposes."

### Development of Defense Projects

Experience gained in operating public projects during the past five years and the high degree of flexibility of its program enabled the WPA to adapt its activities readily to the needs of the intensive defense program initiated in the spring and summer of 1940. The WPA organization, functioning in every state and nearly every county of the United States, has established and coordinated working arrangements with both local and Federal agencies and is able to assign qualified workers to defense projects as rapidly as working plans are developed and approved.

The ERA Act of 1935 and subsequent appropriation acts definitely prohibited the use of WPA funds for munitions, warships, or instruments of war, but permitted the construction and improvement of buildings and airports and of other types of construction and nonconstruction work on military or naval reservations, posts, forts, camps, or fortified areas. Many projects operated by the WPA had been sponsored by the War and Navy Departments, the Coast Guard, and the National Guard. Beginning in July 1938 the Federal defense agencies themselves operated a number of similar WPA projects with Federal funds allocated to them by the WPA. In his testimony before the Senate Committee on Appropriations in regard to the Emergency Relief Appropriation Act, fiscal year 1941, the Commissioner of Work Projects stressed the work which could be done by WPA in improving or developing military and naval air bases, mobilization centers, armories, rifle ranges, housing for troops, and other training facilities.

Over 200 National Guard armories have been erected by the WPA—Santa Fe, New Mexico (top), and Birmingham, Alabama

In addition to its emphasis on projects of these general types during the fiscal year 1941, the WPA will continue its work on municipal airport and airway projects sponsored by state and local public bodies, most of which have an important place in defense plans.

The WPA will also cooperate with the War and Navy Departments and with other agencies in the improvement of roads of strategic military importance. Access roads to army posts, to naval stations, and to military and naval depots, arsenals, and reservations, and roads within these reservations will be developed. Road shoulders of strategic highways will be widened sufficiently to permit the parking of army convoys without obstructing usual traffic, and emphasis will be given to the development of auxiliary roads that parallel main routes included in the strategic highway network. Bridges will be widened and strengthened and obstructions will be eliminated. Roads and streets in industrial areas and those providing access to important civil, military, and naval airports also will be improved through WPA project work.

Certain selected types of work which the WPA has already done in connection with national defense illustrate the extent and importance of the contribution this program can make to the expanded defense program. At the end of May, before attention became concentrated on defense measures, 740 projects involving construction and improvement of

Improvements made at Fort Monmouth, New Jersey, include the construction of roads and turning circles, grading, and landscaping

military or naval facilities and municipal airports were either in operation or approved and available for operation by the WPA. The 559 active projects were being conducted at 367 different sites located throughout practically all the states. Available for initiation were 181 additional projects located at 152 different sites. These totals do not include the projects then in operation or available for operation by the War or Navy Department or the Coast Guard with WPA funds.

Employment on projects operated by the WPA that were sponsored or cosponsored by the Army, Navy, Coast Guard, and National Guard totaled about 47,000 workers in the first week of June 1940. An additional 13,000

<sup>A</sup> Limited to projects sponsored or operated by the War and Navy Departments, the Coast Guard, and the National Guard, and all airport and airway projects sponsored by state and local civil agencies.

At the Wilmington (Delaware) marine terminal WPA workers erected this brick administration building, reconditioned the towers, and laid new concrete walks along the river front

persons were working on airport and airway projects sponsored by state and local agencies and 39,000 persons were employed on WPA projects operated by the War and Navy Departments and the Coast Guard, bringing employment on projects of importance to national defense to about 100,000 (Table 1).

More than half of the employees were engaged in the construction or improvement of arsenals, barracks, armories, and other types of buildings essential to military and naval operations. Of the remaining workers a majority (25,000) were employed on airport and airway projects; among them were almost 10,000 persons working on airport projects that were sponsored or operated by the War Department.

More than 1,000 persons were employed on professional and service projects sponsored by the chief defense agencies. Almost half of these workers were engaged in engineering surveys and the others were indexing state military records, preparing handbooks of military terms, drafting maps needed by the War Department, and performing similar work.

Practically every state was represented in the list of projects on which these WPA workers were engaged. The number employed was largest in California (9,823) and New York (9,372). In Massachusetts 6,655 persons were at work and the number engaged on such projects in 13 other states ranged between 2,000 and 5,000. In addition to the workers employed in continental United States, about 8,000 workers were employed on projects for

the construction of buildings at an army post and a landing field at the air base in Puerto Rico, nearly 1,000 on projects operated by the WPA in Hawaii, and some 300 on an airport and various transportation projects in the Virgin Islands.

TABLE 2.—NUMBER OF PERSONS EMPLOYED ON WPA AIRPORT PROJECTS AND ON OTHER WPA PROJECTS SPONSORED OR OPERATED BY MILITARY AND NAVAL AGENCIES, BY STATE<sup>a</sup>

JUNE 5, 1940

| State                | Total  | Projects Operated by WPA | WPA Projects Operated by Other Federal Agencies |

<sup>a</sup> Limited to projects sponsored or operated by the War and Navy Departments, the Coast Guard, and the National Guard, and all airport and airway projects sponsored by state and local civil agencies.

As one of the first steps in expanding WPA participation in the preparedness program, instructions were issued on June 5, 1940, giving priority status to work at 73 locations in 31 states, the District of Columbia, and Hawaii. At some of these locations projects were already in operation. At others, approved projects were to be started immediately and all were to be completed at the earliest possible date. Work on the priority projects includes camp and cantonment development and construction and improvement of airports in strategic areas, of housing for military garrisons, and of facilities at navy yards and military reservations.

During June, Presidential approval was given to many other applications for projects of importance for the defense of the United States. Illustrative of these are projects sponsored by National Guard units, state military departments, and other state and local public bodies, such as the projects that were approved for the construction of armories or additions to armories at Williamsburg, Kentucky; Elizabethton, Tennessee; and Jacksonville, Florida.

WPA projects sponsored by the Army or Navy were approved during June and July for the construction of motor vehicle sheds, warehouses, and target houses at Fort Sheridan, Illinois, and for the installation of gasoline tanks and pumps and the construction of rifle and pistol ranges and other facilities at Miller Field and Fort Wadsworth, New York. Proj-

ects were also approved for the improvement of magazines at the Curtis Bay Ordnance Depot, located in Anne Arundel County, Maryland, and for the rehabilitation of warehouse facilities at the San Antonio Arsenal in Texas.

Predominant among the first allocations of newly appropriated WPA funds for WPA projects operated by other Federal agencies were those made to the War and Navy Departments. Projects approved immediately after July 1, 1940, for operation by the Bureau of Yards and Docks of the Navy Department include a \$1,000,000 job for the construction and rehabilitation of buildings and improvement of the sea wall and of the barracks at Mare Island Navy Yard in California. Also approved for operation by the Navy was a \$900,000 project in San Diego through which rifle ranges will be extended, buildings constructed and renovated, landing fields improved, and railroad tracks laid at the Marine Corps Base, the Naval Air Station, the supply depot, the training station, and the destroyer base. For the Army, a \$750,000 project was approved for construction work on roads, buildings, and utility systems at Fort Knox, Kentucky. Construction work will also be undertaken on projects approved for operation at Lowry Field near Denver, a key site in the Nation's military air system, and at Fort Sill, Oklahoma; Fort Bragg, North Carolina; and Edgewood Arsenal near Baltimore, Maryland.

WPA workers rebuilt the hangar and added administrative offices and recreational facilities for the National Guard at the Little Rock (Arkansas) municipal airport

While as much project employment as possible is being devoted to defense activities, continuous efforts will be made to place project workers in private industry and special efforts will be made to aid project workers in finding employment in industries connected with the defense program. Registers are being established that will facilitate selection of WPA workers who possess skills or abilities that are useful for defense industries. Many of these workers are already qualified and are available for immediate employment in defense industries. Others who would be qualified after brief retraining or reorientation are being assigned to the nation-wide vocational training project

approved July 1, 1940; such workers receive WPA monthly wages during the period of their assignment to the training project. This project, sponsored by the Advisory Commission to the Council of National Defense and cosponsored by the United States Office of Education, was certified by the Secretary of War as important for defense purposes. Under it WPA employees and other workers will be trained for jobs in strategic industries. Regular staff members of state and local vocational educational authorities will be assigned as instructors. For many of the trainees, already grounded in the fundamental skills, the work will be in the nature of "refresher" courses. Others

will receive training that is supplemental to employment experience.

## Work Accomplished on Projects Related to National Defense

Although the resources of the WPA were not specifically directed towards defense purposes until the spring of 1940, the WPA had been performing many aspects of this function during the entire period of its existence. In carrying out the objectives of the ERA Acts, the WPA has helped to maintain the morale and health of over 7,800,000 unemployed workers

and to preserve or increase their skills by providing work which utilized their abilities.

Among the 7,800,000 individuals who were employed on projects at some time in the five years ending June 30, 1940, are carpenters, bricklayers, mechanics, asphalt workers, cement finishers, power shovel, crane, and other machine operators, sheet-metal workers, electricians, plumbers, and workers in many other skilled occupations. Also included are white collar, professional, and service workers with a variety of occupational backgrounds. Some workers in sewing rooms have acquired experience in making surgical dressings and hospital supplies and others have been trained in the

Includes seaplane base buildings.

use of power equipment for the production of clothing. Through courses taken on house-keeping aide and adult education projects, workers have become proficient in first aid. Thousands of certified workers have been employed in hospitals, public institutions, and convalescent homes caring for patients unable to pay for nursing care and many more have acted as technicians in laboratories, clinics, and public health departments. Skills such as these are of fundamental value for purposes of national preparedness.

Project accomplishments are more specific evidences of the contributions that the WPA has made to the defenses of the United States. Professional and service projects that are of direct value include numerous projects for engineering surveys, the drafting and reproduction of maps of military importance for use by the Army, the indexing of military records, and the production of surgical dressings and hospital supplies.

Among construction projects operated for defense agencies public buildings and airport work have predominated. By the end of June 1940, about 600 armories had been constructed or improved on projects operated by the

WPA, nearly all of which were sponsored by the National Guard. Through other projects operated by the WPA that were sponsored by the War and Navy Departments, the National Guard, and the Coast Guard, about 1,800 storage buildings, 750 garages, 180 hospitals and infirmaries, and 8,300 other buildings including barracks, quarters, mess halls, and kitchens were constructed, improved, or enlarged. Other WPA construction work done for these agencies is shown in Table 3.

An outstanding contribution of the WPA program to national preparedness has been the expansion and improvement of airport and airway facilities. Work accomplished through June 30, 1940, on airport and airway projects operated by the WPA is discussed in a separate section of this report (pages 26 to 37). Additional work has been done on WPA projects operated by the Army and Navy Departments for the construction or improvement of military and naval airports. At the end of March projects either had been completed or were in operation at 24 of the Army's air stations and flying fields. For the Navy 13 projects had been completed and 10 projects were in operation at that time.

At Fort Sill (Oklahoma) military reservation these quarters for noncommissioned officers were built under a WPA project operated by the War Department

Fort Dix, located about 15 miles from Trenton, New Jersey, is one of the army reservations on which extensive work has been done by the WPA under the sponsorship of the War Department. The first project at Fort Dix was started in December 1937, and 16 projects had been completed by May 31, 1940. Camp-wide improvements were made including construction of rifle pits and ranges, target sets, and gun supports and grading and sodding.

Seven projects were in operation at Fort Dix on June 5, 1940. Over 500 persons were employed at that time, and it was anticipated that employment would reach approximately 800 in July. Given priority status by an order of June 5, four of the projects were expected to be completed by the first of August. These active projects include a wide range of improvements which will increase the adequacy of this strategically located reservation. Barracks with capacity for 800 men have been reconstructed. Two new dining halls are being built and 13 have been improved. Concrete floors for 75 tents for enlisted men are in process of reconstruction. Both the combat and aerial gunnery ranges are also being reconditioned. A military landing area is being graded, back-filled, seeded, and sodded. Hangar aprons with low type surfacing are to be constructed. Narrow-gauge railroad tracks are being extended 5,000 feet to connect with the anti-aircraft target range. Topographic and boundary surveys are being made preliminary to the drawing of detailed maps of the boundaries, roads, and land contours of the reservation. A 70-acre parade ground is being graded and drained. These specific items are indicative of the types of work being done but are far from an exhaustive list of the total accomplishments at Fort Dix.

Seven other projects at Fort Dix had been approved but not yet placed in operation as of May 31, 1940. These projects include the drainage of the training area, elimination of hazardous open ditches, reconditioning and resurfacing of additional tent floors, painting of magazines and barracks, construction of gravel foundations for macadam roads, construction of macadam floors for motor sheds, and further improvement of the rifle range.

Similar work has been done on other reserva-

The WPA-built runways seen from this control tower at the Harrisburg airport were paved with different kinds of surfacing materials to test their relative durability

tions throughout the country. Among these is Camp Ord, located on the Pacific coast, roughly 85 miles south of San Francisco on the Monterey Peninsula. The War Department has sponsored WPA projects for the development of this 17,000-acre reservation as an important military training ground. During the last two years sponsors' funds totaling more than a million dollars have been expended on this site. The work included the clearing of thousands of acres of brush-covered terrain for maneuver grounds and the construction of many miles of roads.

Camp Ord (California), an important West coast training ground, is being equipped with new 50- to 500-yard rifle ranges (one shown above), 10- to 26-target pistol ranges, and machine gun and artillery ranges

A project at Camp Ord that was started in April 1940 employed 1,000 men in June and will probably be completed by the end of the year. Under this project, a 1,361-acre maneuver area is being reconditioned and secondary dirt roads are being graded. Twelve officers'

quarters are being painted and otherwise renovated. The foundations and the electrical and plumbing fixtures of five mess halls are being improved, and other work on four stables with an area of 4,800 square feet each is under way. Gun ranges for rifles, pistols, and machine

TABLE 4—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED ON WPA AIRPORT PROJECTS AND ON OTHER WPA PROJECTS SPONSORED OR OPERATED BY MILITARY AND NAVAL AGENCIES, BY STATE AND BY SPONSORING AGENCY<sup>1</sup>

CUMULATIVE THROUGH JUNE 30, 1940

(In thousands of dollars)

| State                  | Total   | War Department | Department of the Navy | U. S. Coast Guard | National Guard | Other Agencies (for airports and airways only) |

<sup>1</sup> Limited to projects sponsored or operated by the War and Navy Departments, the Coast Guard, and the National Guard, and all airport and airway projects sponsored by state and local civil agencies.

guns are being developed at Camp Ord. A bombproof shelter has been completed and an ample water supply assured through the construction of storage tanks and wells and the installation of pumps.

Total expenditures on all WPA projects sponsored or operated by the War and Navy Departments, the Coast Guard, and the National Guard, and on the airport and airway projects sponsored by state and local agencies amounted to approximately \$432,272,000 through June 1940. About \$352,491,000 of the total was supplied from WPA appropriations. Expenditures for civil airports and airways sponsored by municipalities, states, counties, and other political subdivisions amounted to \$182,197,000. Projects for the War Department accounted for \$154,131,000, nearly

one-third of the total. State distributions of these expenditures and of the amounts expended on WPA projects operated for or by the Department of the Navy or the Coast Guard and for the National Guard are presented in Table 4.

---

At the close of the fiscal year 1940, the WPA was thus performing a significant role in national defense. Preference was already being given to projects in strategic areas and new defense projects were rapidly being approved and placed in operation. A definite program had been undertaken which will measurably strengthen the physical defenses of the country and will develop trained manpower for employment in key defense industries.

# WPA AIRPORT AND AIRWAY WORK

ADVANCES in the aviation industry during recent years have brought faster and heavier airplanes into use and have extended tremendously the scope of air transportation. Essential to this development has been a parallel expansion of ground facilities, particularly of longer runways and types of surfacing that would be adequate to withstand the shock of landing and the static load of heavy equipment. The need for housing for planes; maintenance, repair, and terminal facilities; administrative offices; lighting and radio facilities; and airway marking has also grown. WPA project work has been an important medium through which ground facilities have kept pace with the swift development of flying equipment.

WPA airport work has been particularly important along scheduled commercial air routes. When an air-line-stop airport has been found inadequate for the modern transport planes which can land with safety only on long paved runways, the WPA in cooperation with local sponsoring agencies has made the improvements necessary to bring the ground facilities up to the standard of the air equipment. The extent to which WPA airport work has been related to the requirements of scheduled air transportation is gauged by the fact that more than 90 percent of the 191 airports that were air-line stops on March 31, 1940, had been improved or constructed through WPA project activities. Among them were major air terminals such as those in New York, Cleveland, Chicago, and San Francisco, as well as many other important stops along the principal airways in the United States.

WPA airport work has enabled many communities to retain air mail, passenger, and express services which they otherwise would have lost. Project activities also have brought these advantages for the first time to other municipalities through construction of new airports or extensive improvements to those that were formerly inadequate for such services. Since the beginning of WPA airport work in 1935 more than five thousand miles of new air routes or extensions have been developed. These include the new route from Huron, South Dakota, to Cheyenne, Wyoming, by way of Pierre, Spearfish, and Rapid City, South Dakota. This route not only opened up new commercial possibilities in an area where there is no through rail transportation, but also provided easier access than had previously been available to the recreational opportunities of the Black Hills.

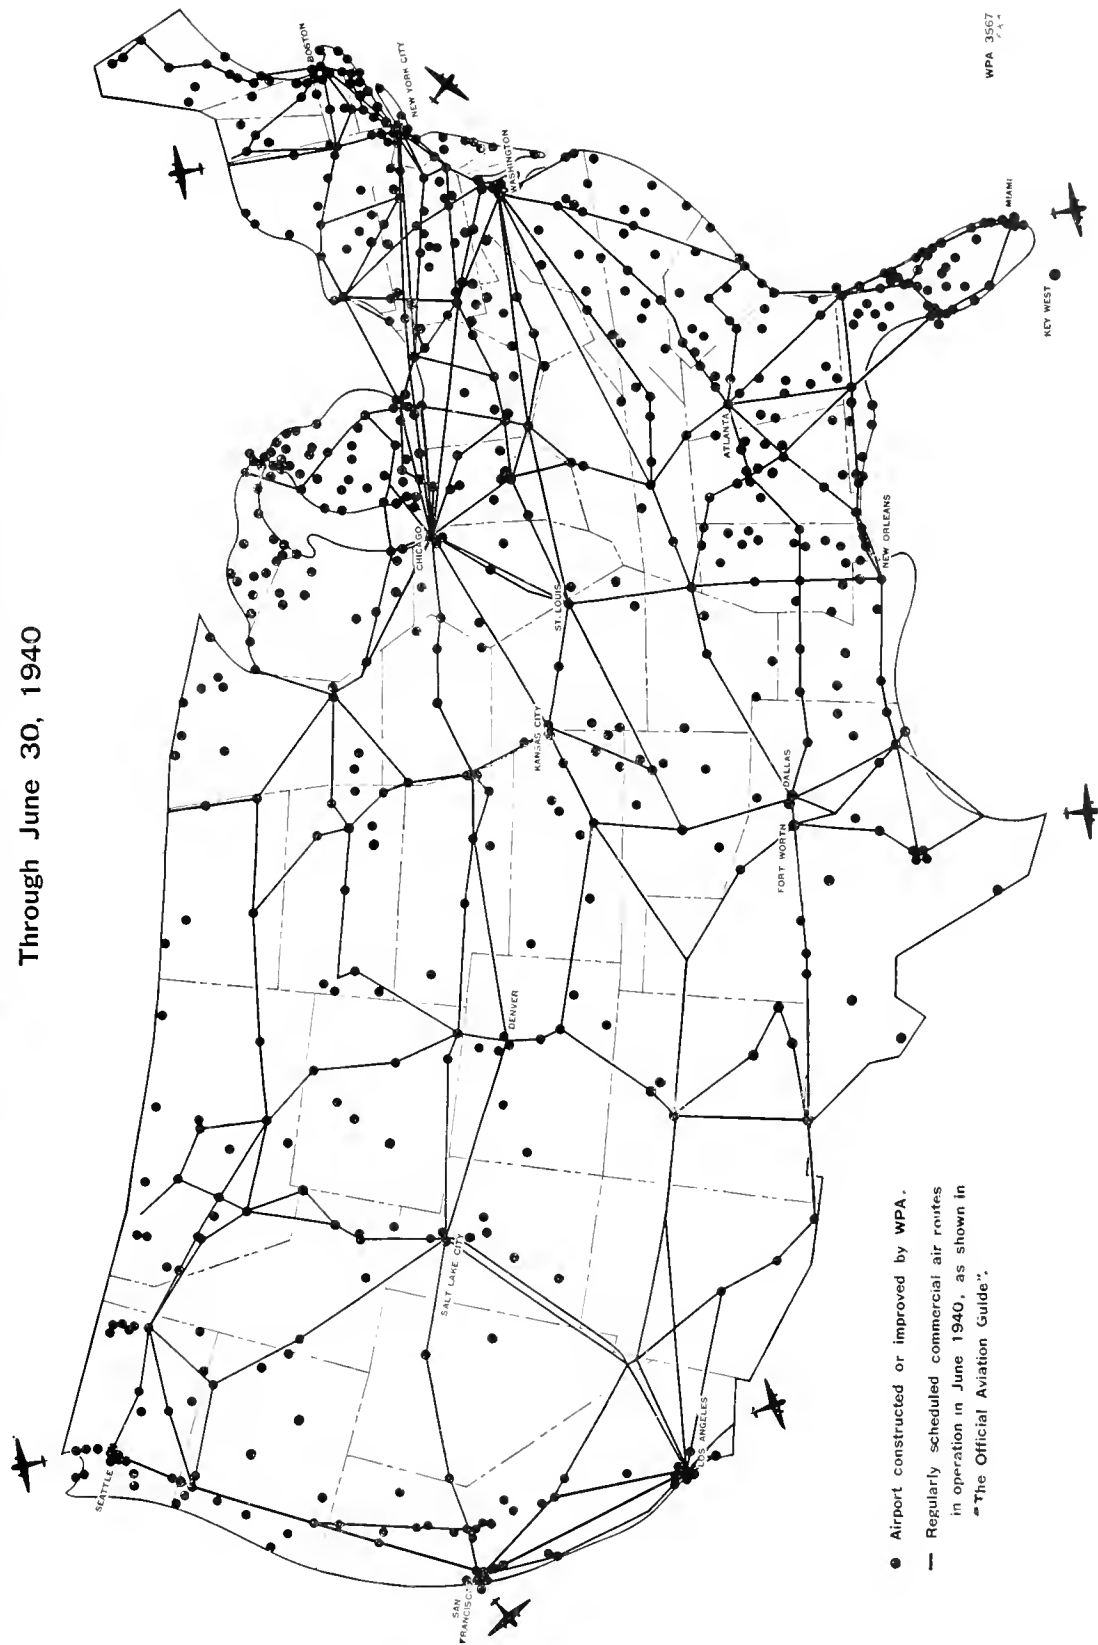

Swift transportation to all parts of the country is in itself one of the first requisites of adequate national defense. WPA airport work not only has contributed greatly to this end, but also has been coordinated with national defense plans in a more specific sense of the word. A report by the Chief of the Air Corps, submitted in November 1937 to the Conference on National Program of Airport Planning,<sup>1</sup> indicated the importance to the national defense of three categories of WPA airport work: the improvement of Air Corps flying fields; the establishment of facilities that would accommodate large

Major General Oscar Westover, "Airport Planning," *Army and Navy Register*, Washington, D. C.: Army and Navy Publishing Company, December 18, 1937, Vol. 58, No. 3028, p. 2.

# AIRPORTS CONSTRUCTED OR IMPROVED BY WPA

Through June 30, 1940

- Airport constructed or improved by WPA.
- Regularly scheduled commercial air routes in operation in June 1940, as shown in "The Official Aviation Guide".

concentrations of aircraft in areas of possible military significance; and the provision of airport facilities necessary for the movement of aircraft between such areas.

In surveying the Nation's airport facilities of all categories the Air Corps adopted certain minimum and maximum standards. Developments in military aircraft, which have increased requirements in respect to ground facilities at least as much as have the improvements in civil aircraft, were a basic consideration in determining these standards. Another factor considered was the advance made in equipment available for all-weather flying which also makes new demands on ground facilities. Only about 100 airports were found at the time of the survey to measure up to the minimum requirements although several times that number were considered to be necessary for Air Corps concentrations. The progress of WPA airport work since 1937 has substantially increased the number of airports suitable for concentration of military aircraft. Nevertheless, the fact that only two of the seven geographical areas into which the Air Corps divided the country had as many airports as were at that time considered adequate for defense purposes, combined with the fact that these requirements will probably be raised in the light of recent events, indicates the scope of the work that remains to be done in furthering the plans for national defense. The WPA in cooperation with state and local agencies, as well as with the Army and Navy, is continuing and expanding its work to translate these plans into airports adequate to serve the Nation's needs with respect to military as well as civil aviation.

## Project Procedures

Responsibility for WPA airport and airway work is shared among the Civil Aeronautics Authority,<sup>2</sup> the sponsoring agencies, and the WPA. The role of the CAA is dictated in part at least by the provisions of the CAA Act of 1939 which require that no Federal funds may be spent on the development or improvement

of any civil landing area except on the written certification of the CAA that the proposed facilities are reasonably necessary for use in air commerce or in the interests of national defense. All airport projects, therefore, must be certified by the CAA as meeting these requirements before they can be operated by the WPA. Detailed project information is submitted to the CAA by the WPA for certification purposes. It must show the roads, power and telephone lines, and all vertical structures within specified distances of the airport as well as existing facilities and proposed developments. Detailed plans and specifications must support the proposals for all projects involving grading, drainage, surfacing, and lighting. In addition to its certification functions the CAA through its own regional officers furnishes advice, consultation, and general technical supervision of the aeronautical phases of the designing and planning of each airport project to be carried out under the WPA.

Sponsors of airport and airway projects have extensive responsibilities in the initiation and planning of projects. They must provide the necessary land and must operate and maintain the completed aviation facilities in the interest of the public without granting exclusive rights for their use to any private individual or corporation. Project sponsors must supply detailed plans, specifications, and estimates for the work proposed and are also responsible for the technical supervision of the construction. Special provision with respect to ownership is made for the operation of projects relating to air navigation facilities on property leased by the CAA. Such projects include work on intermediate fields, radio-direction-finding devices, instrument approach systems, and similar facilities and may be sponsored by the CAA or by state or local governmental agencies with CAA authorization.

WPA responsibility for airport and airway projects involves engineering review prior to the initiation of work as well as the assignment of workers and the actual operation of the project. The WPA is responsible for project administration, work procedures, and the utilization of labor and equipment.

Plans for the coordination of WPA airport and airway work with national defense measures

<sup>2</sup>Effective July 1, 1940, the Civil Aeronautics Authority and its functions were transferred to the Department of Commerce by Reorganization Plan No. 14.

Seaplane landing facilities, runways, an administration building, and a hangar have been constructed by WPA workers at Tampa, Florida

involve closer relations with the governmental agencies most concerned in airport work but require no important departures from the established procedures. Recent statutory provisions relating to projects certified by the Army and Navy as important for military or naval purposes, have, however, required the development of methods to facilitate their application. These provisions, as explained elsewhere in this report (pages 15 and 16), permit the liberalization of requirements concerning nonlabor costs, sponsors' contributions, and the amount of Federal expenditures on building projects, as well as hours of work and monthly earnings.

### Examples of WPA Airport Work

The hundreds of airports built or improved in the past five years through WPA project work include ground facilities for the use of all types of planes, from large military and air transport equipment to tiny pleasure craft. They range in size from the huge international air terminal in New York City, through most of the major stops on the Nation's airways, to small fields like those at Hyannis, Massachusetts; Aberdeen, Mississippi; and Panguitch (Bryce Canyon), Utah. To illustrate the variety of facilities constructed at airports by the unemployed workers on WPA payrolls, a few of these airports are described briefly in the following paragraphs.

An outstanding example of WPA airport work is the municipal airport (La Guardia Field) built on New York's East River between Flushing and Bowery Bays in cooperation with the City of New York. From this 560-acre airport with its extensive facilities for both landplanes and seaplanes, air travelers take off to Europe and Bermuda as well as to points all over the United States, including those providing connecting services to South America, the West Indies, and the Far East. Four macadam-paved runways, the longest 6,000 feet in length in the direction of the most frequently prevailing wind (northwest-southeast), offer safe landings to the largest landplanes. Taxiways connect the runways with an apron large enough to permit the loading or unloading of as many as 15 transport planes at the same time.

Separate terminals for transoceanic seaplanes and transcontinental landplanes have been provided, each with its own administration and hangar buildings, and connected by a taxiway for planes and by an interior roadway parallel to Grand Central Parkway, one of the main approaches to the airport from Manhattan. The landplane administration building has as its center a 90-foot rotunda surrounded by ticket offices and various passenger facilities. Above it is a circular lounge and terrace restaurant. In the wings are baggage, express, and post office rooms, as well as offices and

## A GUARDIA FIELD

New York's Municipal  
Airport

A full view of the field may be had from the promenade on top of the enclosed circular loading platform (top). The longplane administration building (left) is surmounted by a copper and steel control tower (inset). In the marine terminal building (above) all facilities of a port of entry are provided for air passengers from Europe and Bermuda. Three of the field's mammoth hangars and part of its parking areas are shown below.

essential facilities for the large airport staff. The building is surmounted by a tower housing the most powerful rotating beacon in the country 13,500,000 candlepower and the latest type of wind velocity and direction indicators. Three huge landplane hangars flank the administration building on each side and are joined to it by a 1,500-foot arc of covered concrete platforms. The hangar doors give a clear space of over 163 feet on either side of the center pillar, admitting the largest transports now in use.

The marine terminal, occupying the extreme western section of the airport, is adapted to the needs of transoceanic seaplanes. Its administration building contains all the facilities of a port of entry, including customs offices, immigration inspectors' and detention rooms, and quarters for the public health service. The seaplane hangar, with its roof supported by an unusual system of trusses radiating from a single pillar to eliminate the need for any interior supports, has five sides; two of them provide door openings 204 feet wide. A passenger landing float, a ramp up which seaplanes are hauled from the water on standard gauge railroad tracks, and other essential facilities were constructed as part of the project operations.

Other work completed by WPA workers at La Guardia Field has included extensive lighting systems, equipment for night and instrument landing, construction of various maintenance and storage buildings, and other facilities required for modern air transport operations. Development of the airport site was a tremendous undertaking in itself, since over 60 percent of the airport area is made land. Cinders, ash, and refuse to fill over 350 acres were brought by hundreds of trucks over a temporary trestle from the Rikers Island dump across the channel. Thousands of feet of drainage ditch and pipe as well as similarly great lengths of sewer and water mains and underground electric cable had to be installed, and other related work done on a large scale.

In the spring of 1939 more than 20,000 workers were employed at the airport. By March 1940, however, most of the major construction work had been completed and the number working had been reduced to about

3,000 persons. They were engaged chiefly in finishing one of the landplane hangars and several maintenance buildings. Work on an administration building for the CAA and a smaller hangar for itinerant private planes was just getting under way during the last quarter of the fiscal year.

Snohomish County Airport, built on a ridge near Everett, Washington, is another of the WPA's major airport jobs. Above the altitude of most Pacific coast fogs, it has been approved as an alternate landing field for the planes that come in to Seattle (22 miles away) on scheduled flights from San Francisco, Alaska, and the East. On the first project at Snohomish, begun in late 1936, between 300 and 400 men were employed in clearing and leveling operations, removing tree trunks, and grading the large area necessary for four runways. Narrow-gauge railroad equipment (the locomotives fired with wood salvaged in the clearing operations) as well as tractors and scrapers were used to transport the several million cubic yards of material that had to be moved. Later, extensive drainage and related work was done in preparation for the runways. The north-south runway was given a five-inch gravel base and bituminous surfacing over a length of 4,800 feet. This runway, which is 200 feet wide, will eventually be extended to 5,800 feet and three other runways 150 feet wide with a total length of 14,400 feet will be constructed.

The work at Snohomish has been directed towards the maximum immediate usefulness of the airport. Lighting for the north-south runway has been provided through flush-type lights along the landing strip. A revolving beacon light on a temporary 50-foot tower and lighted wind cone have been completed, and boundary lights are being installed. Even with the limited facilities then available, about 50 landings and take-offs were made in 1939 at this field by air transport planes. The construction of a hangar, administration building, taxi strips, aprons, turning circles, and additional runways that are included in the project plans and some of which were under way at the end of June, will make this airport a notable addition to the air transportation facilities of the Pacific Northwest.

Albuquerque, New Mexico, is not a large city but, since the construction by WPA of an airport with accommodations for large trans-continental skyliners, it has become an important spot on the airway maps. For passengers from New York or Los Angeles it offers connections north to Denver and south to El Paso and Mexico City, as well as to the oil fields of eastern New Mexico and the vacation center, Carlsbad Caverns National Park. The airport, located about five miles southeast of Albuquerque, has four runways; the shortest of them is 5,200 feet long. Two of the runways are paved, as are also the two 150-foot taxiways and two aprons. In addition to the construction of these landing facilities and the related grading and drainage work, project operations included the erection of hangar and administration buildings and the installation of runway and obstruction lighting and flood-lighting systems.

The administration building, resembling the Pueblo architecture typical of the Southwest, is designed to meet all the needs of air transportation. It includes a radio station, weather bureau, and pilots' rooms, as well as the usual passenger facilities. The 207- by 200-foot hangar is of steel and reinforced concrete with a concrete floor. Its longest door, 165 feet wide and 35 feet high, will admit the large transport planes which land at Albuquerque at least 12 times each day. In addition to the work on the airport itself, which was nearly complete by the end of June 1940, the construction of an Army Air Corps barracks to house 50 men was under way at that time.

At Nashville (Berry Field), Tennessee, extensive airport development work has been carried on through a large number of WPA projects, the first of which began shortly after the initiation of the WPA program. Through the most recently started work at this 540-acre airport, from which frequent air service (more than 30 scheduled stops a day) is now available to Chicago, Washington, Miami, Dallas, and other points, the landing field is being enlarged and several taxi strips are being paved with bituminous macadam. Two new hangars are also being built with a concrete apron common to both of them. A completed hangar now houses planes of the 105th Aero Squadron of the National Guard and is used also by visiting Army and Navy aircraft. The earliest projects at Nashville involved extensive clearing, grubbing, grading, and drainage work preliminary to runway construction. The runways were then paved with asphaltic concrete. Two of them are 4,000 feet long, and one is equipped with facilities for blind landing when Cumberland fogs obscure the field. WPA workers also built administration buildings, auto parking areas, and other miscellaneous buildings constituting a service center easily reached from the runways by concrete taxi strips.

Moline Airport, built entirely through WPA projects sponsored by the City of Moline, Illinois, not only is a unit in the Nation's air transportation system and a center for private flying operations, but also is of military importance because of its nearness to Rock Island Arsenal and the Savanna Ordnance Depot

At Albuquerque, New Mexico, WPA workers have completed an administration building and a large hangar, various runways, and other landing area developments

Administration building and one of three new hangars at Nashville's WPA-built airport; the hangar houses National Guard planes and is used by visiting army and navy aircraft

located a short distance up the Mississippi River. The work of transforming over 200 acres of pastureland and lake into a modern airport began late in 1935. Large crews of workers filled in the lake and leveled the field, which was nine feet higher at the north than at the south side. In addition to moving all the soil essential to the leveling of the field, they installed thousands of feet of drainage tile, sewer pipe, and electric cable in preparation for the runways. These range from 2,950 to 3,040 feet in length and are paved with black-top asphalt to a width of 100 feet with 50-foot gravel shoulders on each side. Taxi strips and turning circles are similarly paved. WPA workers also have built a hangar, an administration building which contains a restaurant and facilities for air-line passengers, and a pump house and water system utilizing the airport's own 350-foot well. This new airport, about 50 miles west of Chicago, makes scheduled air transportation facilities available not only for East Moline but also for East Moline, Rock Island, and Davenport, which with their suburban areas include a population of about 200,000 persons.

At Morgantown, West Virginia, an industrial center and university site, the WPA has been cooperating with the city in building a new airport which not only brings safe landing facilities to this locality for the first time but also is considered of strategic importance in the protection of the industrial area between Morgantown and Pittsburgh, about 60 miles to the north. WPA workers have cleared, leveled, and drained an area of nearly 200 acres practically on a mountain top about a mile outside

the city. They have built three paved runways ranging from 3,100 to 3,600 feet in length, all 100 feet wide. Turning circles and aprons with the same high type surfacing have been completed and three 75-foot taxiways are under construction. The airport as yet has no buildings except a temporary wooden hangar. Project plans include the construction of hangar and administration buildings and other miscellaneous improvements.

WPA work at the Idaho Falls Airport, a stop on the airway between Salt Lake City and Helena, Montana, has provided landing facilities adequate for the air liners which fly the route regularly and in summer carry tourists to Yellowstone Park, less than a hundred miles away. The 5,000-foot north-south runway was constructed and boundary lights were installed for night use, and the essential grading and leveling work done on the WPA project. Other products of WPA work are the hangar, administration building, and caretaker's quarters, built of logs in a rustic style. The hangar can accommodate eight planes. Its two wings provide a repair shop and garage and also locker and class rooms for the flying school maintained at the airport. The two-story administration building has room for the airways radio station and living quarters for the radio operators as well as the usual facilities for air-line passengers.

Among the military and naval air stations which have been developed and improved through WPA project operations are Maxwell Field near Montgomery, Alabama, and Reeves Field in Los Angeles (San Pedro), California.

One of the 168 new hangars built by WPA workers at airports throughout the country

Under some of the many WPA projects that have been operated at Maxwell Field since early in the history of the program the drainage of the landing field has been extended, three runways and a taxi strip have been paved, runway lights have been installed, and an area cleared for the site of a radio beacon. Other projects have involved extensive construction and improvements of facilities, including a number of barracks (some housing 40 and others 80 men), mess halls, and garages, a quartermaster's warehouse, and additions to the officers' mess, recreation and laundry buildings, and the post hospital. Extensive clearing, landscaping, and road and sidewalk construction have also been done.

The WPA work at Reeves Field, the Navy's air base on Terminal Island in Los Angeles,

Markers pointed on roofs or roadways identify communities to pilots overhead and also direct them to nearby airports

has involved the construction of a complete airport with facilities for both landplanes and seaplanes. In addition to three paved runways, 200 feet wide and ranging from 2,200 to 3,600 feet in length, WPA workers have built a concrete seaplane haul-out ramp and platform, six paved taxiways, and a paved hangar apron, and have installed floodlighting and boundary, runway, and obstruction lighting systems. They also have constructed numerous buildings. These include two hangars; barracks, mess hall, and galley to accommodate 200 enlisted men and quarters for 50 officers; and garages and storehouses of various types. This work has been done through the operation of a number of different projects, the first of which began soon after the initiation of the WPA program. Work under way at the end of March 1940 included the construction of a dispensary, storage buildings, and shop lean-to's, as well as further improvements to the landing field and the seaplane base.

### Work Accomplished on Airport and Airway Projects

Descriptions of work done at individual airports, although illustrative of the nature of activities and their importance to specific communities and for specific purposes, do not reveal the broad scope of WPA accomplishments in the field of airport development. This is better indicated by a recent inventory of work completed over the entire period of WPA operations through June 30, 1940.<sup>2</sup> In this period about 250 airport landing fields were developed or enlarged and a considerably larger number were modernized. They include many airports along the Nation's major air lanes and strategic military airfields, as well as small airports in less populous areas off the regular lines of flight which previously had no facilities for landing or servicing of planes.

Among the greatest contributions to the airport facilities of the Nation made by WPA project accomplishments was the completion of 1,970,000 linear feet (or 370 miles) of new runways and the improvement of about 650,000

<sup>2</sup> The summary does not include work completed on WPA projects operated by other Federal agencies.

WPA project work has included numerous installations of field lighting systems to make airports adequate for night landings

feet (or 120 miles) of existing runways, as may be noted in Table 5. Nearly 60 percent of the newly constructed runways was paved with bituminous, concrete, or other high type surfacing material. A smaller portion (40 percent) of the reconditioned runways was of an equally high type of surface.

New runways were built in nearly all states. This type of airport work was particularly extensive in Pennsylvania and Colorado, where new runways totaling 144,400 feet and 127,300 feet, respectively, had been completed by June 30, 1940. (See Table 6.)

A small part of the WPA airport work has been directed towards the provision of facilities for seaplanes. Twenty-five new ramps or landing platforms have been constructed, most of them along the Atlantic seaboard. The one recently completed at La Guardia Field in New York City is the regular base for transoceanic seaplanes. In addition to the new construction work, one seaplane ramp in Massachusetts and one on a Wisconsin lake have been reconditioned through WPA work.

New airport buildings completed by WPA workers by the end of June 1940, numbered 478. Of these, 168 were hangars ranging in size from the immense structures at La Guardia

Field that can accommodate 14 large transport planes to small hangars that house a few small pleasure craft. Also included were 74 administration and terminal buildings and 236 miscellaneous structures such as repair shops, maintenance and storage buildings, and garages.

<sup>A</sup> Includes seaplane base buildings.<sup>B</sup> Includes additions.

Among the 1,090 airport buildings that were remodeled by the project workers were 260 hangars and some 830 other buildings of miscellaneous types. In addition 65 airport buildings were enlarged. A considerable portion of the airport building construction, particularly the renovation work, was concentrated in Texas, California, and New York, although some work was done in practically every state.

The lighting facilities that are essential to make an airport adequate for use by air transports have been considerably expanded through WPA project activities. Floodlighting for night landings has been newly installed at 69 landing areas in 28 states and New York City, and floodlighting facilities of 17 landing areas have been improved in 14 states and the District of Columbia.

Another phase of WPA work related to air transportation is the establishment of aids to air navigation, such as airway markers and beacons. Among the 10,490 new airway markers made by WPA workers are the 85-foot stone letters that identify New York's municipal airport from high in the air, as well as the much smaller markers painted on roofs and roadways in many sections of the country. Airway markers that were improved number 2,870. In addition, 67 new airway beacons have been built to guide night flights and 15 beacons have been reconditioned.

The accomplishments mentioned above relate to specific facilities completed between the beginning of the WPA program and June 30, 1940. They do not give adequate indication, however, of the actual amount of the work involved. Extensive clearing, grading, and drainage work was done in the construction of runways. Thousands of feet of drainage pipe, water, sewer, and telephone lines were installed. Millions of square yards of paving was completed in parking areas, roads, sidewalks, taxi strips, and hangar aprons at airports.

### Expenditures on Airport and Airway Projects

The construction and improvement of airports during the five years from the initiation of the WPA program through June 1940 has been done at a cost of \$200,505,000. Of this amount \$150,812,000 was from funds appropriated to the WPA. Although some work has been done in practically every state, it has been much more extensive in some than in others. Expenditures were largest in states where large-scale improvements have been made on major airports and air-line terminals.

Recognition by project sponsors of the value of airport development is evident from the extent of their financial participation in WPA projects of this type. During the 1940 fiscal year, sponsors carried about 40 percent of the total cost of WPA airport and airway projects; they provided \$15,018,000 of the total of \$37,279,000 spent during the year. This con-

TABLE 7.—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED ON AIRPORT AND AIRWAY PROJECTS OPERATED BY WPA, BY STATE AND BY SOURCE OF FUNDS

CUMULATIVE THROUGH JUNE 30, 1940

| State                | Total         | WPA Funds     | Sponsors' Funds |
|----------------------|---------------|---------------|-----------------|
| Total                | \$200,505,453 | \$150,811,719 | \$49,693,734    |
| Alabama              | 2,002,731     | 1,695,870     | 306,861         |

tribution was relatively greater than that of sponsors of any other major type of WPA project. It also was somewhat greater than that of airport project sponsors during earlier years. Although sponsors provided about 17 percent of the airport project costs during the earlier years of WPA operations as a whole, they made available nearly 32 percent of the total in the fiscal year 1939.

# EMPLOYMENT AND EARNINGS

**D**URING the fiscal year 1940 the WPA employed an average of 2,054,000 workers, or about a third less than the average number (3,014,000) employed in the fiscal year 1939. Starting with about 2,282,000 in July 1939, average monthly employment declined to a low of 1,721,000 in September, gradually increased in the autumn and winter until it exceeded 2,309,000 in February and March, and then dropped in the spring months to a June average that was only a little higher than that for the preceding September.

The numbers of persons employed by the WPA in the months since it was established in the summer of 1935 have fluctuated considerably in accordance with the amount of funds appropriated, reflecting changes in the volume of need arising from unemployment and from distress in agricultural areas. In the first months of its operation the program developed rapidly, until an average of 3,019,000 persons had project jobs in February 1936. From that time until September 1937, a period of expanding employment in private industry, the number of WPA workers was reduced gradually, except in the drought areas where several hundred thousand drought victims were provided with jobs in the last six months of 1936. In September 1937 only 1,456,000 workers were employed on WPA projects. The sharp recession in business activity that began in the fall of 1937 and the high level of unemployment during the ensuing year necessitated an increase in WPA employment which continued for more than 12 months. The expansion was accentuated by the serious condition of the tenant farmers and farm

laborers in the South in the summer and fall of 1938 and by the New England hurricane which occurred in September of that year. Subsequent curtailment in operations reduced the average number employed to less than 2,600,000 in June, the last month of the fiscal year 1939, and further to 1,721,000 persons in September 1939. In order to meet the greater need for assistance that arises in winter months the number of WPA jobs was gradually increased to the 1940 peak in March. Seasonal reductions then brought employment down to 1,756,000 at the end of the fiscal year, the lowest June average in WPA history. (Table I of the appendix shows the number of persons employed on WPA projects, by weeks, from August 1935 through June 1940, and Tables II and III give state distributions by selected periods.)

The generally lower level of WPA employment in the fiscal year 1940 as compared with the fiscal year 1939 is attributable to the smaller appropriation made for the operation of the program in 1940 as a consequence of increasing private employment. Fluctuations during the year, however, reflect the operation of an employment schedule planned to reduce the number of persons working in the summer months so that more jobs can be provided in the winter when need is greatest. The unusual steepness of the decline in employment during the first few months of the fiscal year was chiefly the result of the 1939 ERA Act provision which required that all certified workers, except veterans, who had been continuously employed on WPA projects for 18 months or longer must be separated from the program. The act required that the ter-

mination of all workers whose 18 months of employment had been completed by the beginning of the fiscal year be effected by the end of August. Because of the large numbers of workers affected, replacements could not be made as rapidly as terminations were required. Workers dismissed under this provision were not eligible for reemployment until 30 days after their removal and until they had been recertified as in need of employment.

Most of the workers on WPA projects are certified persons referred to the WPA by local public relief agencies. At the end of June nearly 96 percent of the workers paid from WPA funds were certified persons. The large majority of those who were not certified were employed as project supervisors and the remainder were engaged to perform skilled jobs necessary for project operations for which certified workers were not available in sufficient numbers. Some of the project supervisory workers had originally been certified as in need of employment

but were given noncertified status when they were assigned to supervisory duties. The percentage of workers on projects operated by the WPA who are certified as in need did not change much during the past year, but, in accordance with WPA regulations, a slight increase occurred in the relative numbers of certified workers on the WPA projects operated by other Federal agencies. At no time since the beginning of the program, however, have certified persons constituted less than 94 percent of the employment on projects operated by the WPA.

Some of the persons working on WPA projects are women who serve regularly as the economic heads of their families or temporarily while the usual economic head is incapacitated or otherwise unavailable for employment. Most of the women workers are employed in sewing rooms, on housekeeping aide projects, on units of the education and recreation programs, or on clerical and other types of professional and

100,000 less than a year earlier, women workers in June 1940 constituted a larger percentage of the employment total.

## Labor Turnover on WPA Projects

The group of workers employed by the WPA is constantly changing. Thousands of persons leave WPA projects each month, and thousands of others are added to the program. The number of different individuals employed by WPA at some time between the beginning of the program and June 1940 is estimated at 7,800,000, although only 1,750,000 were employed on projects at the end of this period.

Between July 1939 and June 1940, a year in which WPA employment declined substantially, nearly 700,000 persons who had never before worked on the WPA program were assigned to

project jobs. During the same period large numbers of former WPA employees who had left the program for private employment or been separated for other reasons were reassigned to project jobs. Reassignments, which ranged between 100,000 and 300,000 per month (see Chart 4), totaled nearly 2,375,000 during the 12-month period. Some persons, however, were reassigned more than once during the year, following brief periods of temporary private employment or of separation for other reasons.

Separations from the WPA program, ranging from about 200,000 to 800,000 per month, totaled over 3,850,000 for the year. Approximately 1,150,000 of these were voluntary separations, most of which were made in order to accept temporary or permanent jobs in private industry but some of them were for such reasons as new sources of income, illness, or injury. The number of voluntary separations varied between 64,000 and 148,000 each month, reflecting for the most part changes in private employment conditions. In the fiscal year 1940 the rate of voluntary separations (separations during the month as percent of employment at the beginning of the month) ranged between 3 and 7 percent and averaged approximately the same as in the preceding year. The highest rates occurred in September and October 1939. (See Table 10.)

The total volume of turnover in the 12 months ending with June 1940 was greatly influenced by the provision of the ERA Act of 1939, which required the dismissal of all certified workers, except veterans, who had been continuously employed on the program for 18 months or longer. Approximately a third of the workers employed on WPA projects at the beginning of July 1939 had been continuously employed under the program for 18 months or more. The statutory provision made it necessary to terminate these workers by August 31. Consequently, nearly 783,000 WPA workers were separated from project jobs during July and

August. After September 1, 1939, the number of workers separated in accordance with the 18-month provision declined considerably, totaling only about 257,000 in the four months from September through December 1939 and 206,000 in the six months from January through June 1940.

Workers dismissed under the 18-month provision were made ineligible for WPA employment for at least 30 days; at the end of that period they might be recertified if still in need. That a considerable number of the workers dismissed under this provision were subsequently reassigned to WPA jobs is indicated by the results of a survey conducted in 23 large cities. More than a sixth of the 783,000 workers dismissed in these cities in July and August 1939 were interviewed in September and November 1939 and February 1940. The first interview, made three or four weeks after the workers had been terminated, indicated that only 8 percent had found private employment. By November, about 27 percent had been reassigned to WPA jobs and 13 percent had obtained employment in private industry. Scarcely any more of the dismissed workers had secured private employment by the time the last interview was made in February 1940, but 54 percent of them had been reassigned to WPA.

The volume of turnover, reflecting wide fluctuations in total WPA employment as well

<sup>A</sup> Prior to January 1940 data do not include nonrelief employment. Data for workers employed on WPA projects operated by other Federal agencies are not included prior to September 1938.

<sup>B</sup> Percent of total employment at beginning of month.

<sup>C</sup> Includes separations made for such reasons as new sources of income, death, or illness, as well as separations of persons leaving for private employment.

<sup>D</sup> Separated in accordance with section 16 (b) of the ERA Act of 1939 requiring separation after continuous WPA employment of 18 months.

as the effects of the legislative provision concerning duration of continuous employment, was greater in relation to the level of employ-

ment in the year ending June 1940 than in the preceding year. This is indicated by the monthly accession and separation rates shown

in Chart 5. During the fiscal year 1939, separation rates ranged from 6 to 12 percent of employment at the beginning of the month, whereas in 1940 the lowest rate recorded for any month was 9 percent and the highest 39 percent. The maximum of 39 percent occurred in August 1939 when the large numbers of WPA workers who had been employed continuously for 18 months or more were being terminated. Assignment rates had ranged between 3 and 11 percent in the fiscal year 1939 as compared with a variation of from 5 to 23 percent during 1940; the highest rate reflects the large number of

assignments made in September 1939 to replace workers dismissed in accordance with the mandatory termination provision.

### Employment on WPA Projects Operated by Other Federal Agencies

Most WPA workers were employed on projects operated by the WPA during the 1940 fiscal year, but a few, representing from 2 to 5

percent of the total, were assigned to projects operated by other Federal agencies with transferred WPA funds. Less than 65,000 workers were employed on projects operated by other Federal agencies during July, August, and September 1939. During the next seven months average employment on these projects fluctuated around 75,000, and during May and June 1940 it reached approximately 85,000. The average for the year ending June 1940 was about 73,000 workers.

TABLE 11. AVERAGE NUMBER OF PERSONS EMPLOYED ON WPA PROJECTS, BY AGENCY <sup>A</sup>  
QUARTERLY, JUNE 1939-JUNE 1940

| Agency                                             | 1939      |           |           | 1940      |           |
|----------------------------------------------------|-----------|-----------|-----------|-----------|-----------|

<sup>A</sup> Data represent averages of weekly employment counts made during the months.

<sup>B</sup> Public land inventory projects operated by the National Resources Planning Board of the Executive Office of the President with 1938 Act funds were continued with 1939 Act funds originally allocated to the National Resources Planning Board and subsequently transferred to the General Land Office of the Department of the Interior.

The largest portion of the workers employed on WPA projects operated by other Federal agencies during June 1940 were engaged in work for the Quartermaster Corps of the War Department. This agency employed nearly 26,500 persons on projects for the general improvement of army posts, forts, stations, and airfields. About 12,900 persons were working on projects operated by the Forest Service of the Department of Agriculture for the conservation and improvement of forest and range areas and for the development of recreational areas and facilities. Approximately 10,500 workers were employed on projects of the Bureau of Yards and Docks of the Navy Department that were undertaken to improve naval and air base facilities and to develop a submarine base.

WPA projects of only three other Federal agencies were employing more than 5,000 persons—the Soil Conservation Service and the Bureau of Entomology and Plant Quarantine of the Department of Agriculture, and the National Park Service of the Department of Interior. The projects of the Agriculture bureaus were concerned with the conservation of soil and moisture through land drainage and erosion control measures and with the prevention, control, and eradication of various plant diseases and animal pests. The chief project work of the National Park Service was the development of public recreational areas. (See Table VI of the appendix for state distributions of employment on WPA projects operated by other Federal agencies.)

### Employment on Different Kinds of Projects

A wide diversity of activities is typical of the projects operated by the WPA—a diversity which reflects in part the differences in community needs for various kinds of public improvements and services and in part the variation in the occupational abilities and training of workers eligible for WPA employment in those communities. Activities in the construction field predominate, however, and provide a large majority of the project jobs.

Three out of every four WPA workers employed on projects operated by the WPA at the end of June 1940 were working on construction projects. The largest portion of this group of

| Public health and hospital work              | 10,931            | 0.7     |
| Production                                   | 13,555            | 0.8     |
| Housekeeping aide                            | 26,727            | 1.7     |
| Household workers' training                  | 894               | 0.1     |
| School lunches                               | 23,539            | 1.5     |
| Distribution of surplus commodities          | 21,631            | 1.4     |
| Other                                        | 7,633             | 0.5     |
| Miscellaneous                                | 33,076            | 2.1     |

workers were employed on highway, road, and street projects, working mainly on secondary and feeder roads and on streets and alleys; about 673,000 persons, or 42.5 percent of the total WPA project employees, were engaged on road or street work at the end of the fiscal year. Another large group of workers—almost 158,000, who made up a tenth of the total—were employed on projects for the construction or improvement of sewer systems, water purification and supply systems, and other public utilities. The majority of these employees were working on projects for the extension and improvement

of sewage collection and disposal facilities. Nearly as many workers (144,000) were engaged in the construction of public buildings; a third of them were working on schools and other educational buildings, and the remainder on recreational, administrative, and other kinds of public buildings. About 90,000 workers had jobs on projects for the development of parks and other recreational facilities. Nearly 40,000 were engaged in conservation activities directed chiefly towards reduction of soil erosion and water conservation. About 24,000 persons were engaged on sanitation projects including drainage improvement and malaria control work, 22,000 were working on the construction and improvement of airports and airways, and 33,000 on miscellaneous construction projects involving several different types of work or on projects not elsewhere classified.

One WPA worker in every four was employed on professional or service projects which provided nearly 400,000 jobs. Welfare projects, staffed mainly by women, employed more than 200,000 persons. Of these persons 110,000 were working in sewing rooms, and the remainder served as housekeeping aides, assisted in health work, conducted household workers' training classes, prepared and served school lunches, worked on furniture- or toy-mending and canning projects, or aided in the distribution of surplus commodities. Another group of more

Drilling dynamite holes into limestone preparatory to leveling for a landing field

than 100,000 persons were at work on community service projects, among which are education, recreation, library, and museum projects and the state arts programs. The remainder of the nonconstruction workers were engaged chiefly in various types of research and surveys and work on public records.

The relative number of persons employed on the various types of projects has shifted during the period of WPA operations. In the earlier years of the program the percentage of workers employed on road and street work increased,

TABLE 13. PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

<sup>a</sup> Data apply to the last half of the month.

<sup>b</sup> Not comparable with later periods since miscellaneous group for March 1940 includes certain types of work which have subsequently been included under professional and service projects.

although it has varied only slightly since the beginning of 1938. Greater emphasis has recently been placed on professional and service projects, particularly on housekeeping aide and other welfare projects and on projects for work on public records and research. On the other hand considerably fewer workers, relative to the total, are being employed on projects for the improvement of recreational facilities, on conservation activities, and on sanitation work; in the fiscal year 1940, workers on such projects represented only half as large a percentage as in the first years of the program.

The distribution of workers by type of project reflects, among other influences, the effects of seasonal factors and of expanding and contracting operations. Adjustments to weather conditions are required in a program in which outdoor work predominates. Furthermore, when the amount of employment must be changed rapidly, workers may be assigned to or terminated from certain types of projects—such as road and street work—with greater facility than from others. Fluctuations in the relative importance of the various types also result from changes in private employment opportunities in agriculture and other industries, the diversity in the trends of private employment in different sections of the country, changes in the occupational distribution of workers assigned to WPA jobs, and variation in local needs for project work.

The emphasis given to different types of WPA projects varies considerably from state to state, but construction projects, particularly road projects, predominate in all state programs. Road work, in June 1940, provided more than half the WPA jobs in 13 states and Puerto Rico. Nearly all states employed at least a fifth of their WPA workers on road projects.

Other kinds of activities were prominent in a few states. In Idaho more than a fourth of the WPA personnel were working on conservation projects but in no other state were as many as a seventh of the workers employed on this type of project. Jobs on utility projects were relatively much more numerous in New Hampshire, Rhode Island, and South Carolina than in the country as a whole; in each of these areas they represented more than a fifth of the employment. In nine states sewing projects

accounted for more than a tenth of the total employment. Employment on major types of projects is shown for each state in Tables IV and V of the appendix.

## Employment in Communities of Various Sizes

Forty out of every 100 persons employed on projects operated by the WPA at the end of June 1940 were working in metropolitan areas and counties whose largest cities had at least 100,000 population in 1930. The relative numbers of workers employed in such highly urban areas have been less during the 1940 fiscal year, however, than during earlier periods. Both in November 1937 and in June 1938 more than 45 out of 100 jobs were provided in these heavily populated sections.

As the proportion of WPA workers employed in the largest communities decreased, relatively more employment has been provided on WPA projects in rural counties—counties in which the largest community had fewer than 25,000 people. Almost half the total WPA employees were located in these counties in June 1940. Of this employment about half was in counties with cities of between 5,000 and 25,000 and half in counties whose largest municipality had less than 5,000 population. Representation of the group of counties with cities between 25,000 and 100,000 has shown little variation on a relative basis, accounting for between 15 and 16 percent of the total workers. (See Table 14.)

TABLE 14. PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY SIZE OF COMMUNITY

<sup>a</sup> Community groupings are based upon a classification of counties according to the 1930 population of the largest municipality in each county.

<sup>b</sup> Data apply to the entire month.

<sup>c</sup> Source: Fifteenth Census of the United States, 1930, Population.

Groups of communities of various sizes differ considerably in respect to the types of WPA projects which they initiate. It is apparent from the accompanying chart that the relative number of persons employed on the major types of projects tends to vary according to the size of the community. The relative emphasis placed on nonconstruction work, for instance, is greatest in counties containing the largest cities and least in rural counties. In the largest cities nonconstruction projects provided a third of the jobs at the end of March 1940. In the strictly rural counties with no incorporated community of as many as 5,000 inhabitants, however, such projects accounted for only a sixth of the employment. This general tendency for emphasis on nonconstruction work to increase with the size of the community is evident in all the major types of projects within this group.

Employment on construction projects as a group tends to be largest, relatively, in the rural counties and smallest in the metropolitan

areas. This tendency is particularly evident in the case of road work. Highway, road, and street projects provided only a fourth of the WPA employment in the metropolitan areas in March 1940, but the percentage of workers engaged in such activities increased steadily as the population of the largest city in the county decreased, until in the rural areas road work constituted almost two-thirds of the total. Similarly, sanitation work was more important

<sup>a</sup> Community groupings are based upon a classification of counties according to the 1920 population of the largest municipality in each county.

in rural than in urban areas. For other types of construction projects, such as those for the construction or improvement of sewer systems and other utilities and of recreational facilities, and, to a lesser extent, those for the construction of airports and airways and public buildings the relation differs. (See Table 15.) Over 14 percent of the entire employment in the metropolitan areas was provided on sewer system and other utility projects at the end of March, but less than 5 percent of the rural area employment was on this kind of work. Furthermore, projects for recreational facilities accounted for over 9 percent of the employment in the most highly urban group as compared with only a little more than 1 percent in the counties with the smallest populations.

Variation in emphasis on the different types of projects is a reflection of the differences in community needs in the respective areas. In the densely populated sections a marked shortage has existed in park facilities and places for children to play. In the rural and semirural areas, however, better roads are needed—particularly farm-to-market and other secondary roads, as contrasted with primary highways. The local differences in concentration on the nonconstruction projects, particularly community service and research and

records projects, reflect the variations in the skills of the available workers as well as in community needs. Relatively few white collar workers are certified for employment in the small towns and rural areas. For the most part they are concentrated in the large city areas and it is in these areas that projects designed to use their skills are likely to be found.

## Jobs in the Various Wage Classes

A majority of the jobs on projects operated by the WPA have always been for unskilled workers. Slightly less than two-thirds of the workers (63 out of each 100) at the end of June 1940 were assigned to jobs classified in the unskilled wage classes for which the lower monthly earnings are paid. This ratio was a little smaller than it had been a year earlier when nearly 66 percent of the workers were assigned at unskilled rates. During the 1940 fiscal year, however, fairly wide fluctuations occurred, the percentage of workers who were unskilled reaching as high as 72 percent in January and February.

The year ending with June 1940 marked the introduction of a new classification which

TABLE 16 PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY WAGE CLASS  
SELECTED PERIODS, JUNE 1936-JUNE 1940

| Period       | Grand Total | Project Wage Employees |             |           |           |              |         | Professional and technical | Project Supervisory Employees |     |

| June 26      |             | 100.0                  | 96.0        | 62.7      | 6.6       | 56.1         | 16.9    | 13.2                       | 4.2                           | 4.0 |

<sup>a</sup> With the inauguration of the new schedule of monthly earnings on September 1, 1939, as prescribed in General Order No. 1, the unskilled wage class was divided into two groups: group B, including workers assigned jobs of a routine, simple, nonhazardous nature, and group A, including workers assigned to types of work normally done by construction and general laborers and to routine clerical work.

<sup>b</sup> Data are based on payrolls ending during the first half of the month.

TABLE 17.—PERCENTAGE DISTRIBUTION OF PERSONS EMPLOYED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT AND BY WAGE CLASS

JUNE 26, 1940

| Type of Project                              | Total | Project Wage Employees |           |           |              |         |                            | Project Supervisory Employees |
|----------------------------------------------|-------|------------------------|-----------|-----------|--------------|---------|----------------------------|-------------------------------|
|                                              |       | Total                  | Unskilled |           | Intermediate | Skilled | Professional and technical |                               |
|                                              |       |                        | Group "B" | Group "A" |              |         |                            |                               |
| Total                                        | 100.0 | 96.0                   | 6.6       | 56.1      | 16.9         | 13.2    | 3.2                        | 4.0                           |

divides unskilled workers into two groups, unskilled "A" and unskilled "B." The unskilled "B" employees do work of a simple nature requiring little education or training and for which proficiency may easily be acquired. Their work is not hazardous and does not require heavy physical labor. Seamstresses, janitors, and messengers are included in this group. The remainder of the unskilled workers are in the unskilled "A" wage class and they are paid approximately 10 percent more than unskilled "B" workers. Persons in the "B" classification constituted nearly 10 percent of the total employment during most of the 1940 fiscal year but dropped to 6.6 in June when occupations on sewing projects were reclassified and standardized. The unskilled "A" workers have represented between 56 and 62 percent of the total project employment.

A majority of the remaining workers were assigned in the intermediate wage class which represented between 13 and 17 percent of employment during the 1940 fiscal year and was larger at the end of June than in any earlier month. The percentage represented by skilled workers ranged from 9 to 13 during the fiscal year and was generally lower than during most of the preceding years. With the curtailment of project employment in the spring of 1940, however, the relative numbers of skilled workers had increased to 13 percent by the end of June.

representing a larger portion of the total than at any other time since 1937. Persons in the professional and technical wage class have made up between 2 and 3 percent of the total, and the project supervisory employees have represented no more than 3 or 4 percent during the fiscal year. (See Table 16.)

Generally speaking, the relative numbers of unskilled workers employed are largest during

Learning to read in a West Virginia WPA literacy class

Workers constructing the foundation of a new municipal airport hangar

periods of marked program expansion and smallest when employment is being curtailed. During the summer months of 1937, for example, unskilled workers made up approximately 63 percent of the total as compared with over 70 percent in most months of 1938 when WPA employment was increasing. A reversal of this general tendency occurred in the fall of 1939 when the application of the 18-month rule necessitated the dismissal of a relatively larger number of intermediate and skilled workers than of unskilled workers. At the same time unskilled persons were relatively more numerous among those available for immediate assignment to replace dismissed workers than were skilled workers. Dismissed persons in the upper wage and skill brackets who had been doing work of a supervisory nature were difficult to replace. Another fact that affected the proportion of workers assigned in the skilled wage classes during the past fiscal year was a statutory provision effective July 1, 1939, which lengthened the hours of work for skilled personnel. These factors all tended to make the number of skilled workers relatively smaller and the number of unskilled workers relatively larger than would have been expected on the basis of previous WPA experience during periods of declining employment.

That various types of projects differ with respect to the skills they utilize is evident from Table 17, which presents the distribution of workers by wage class and by major type of project as of the end of June 1940. Workers of the unskilled "B" class were relatively most

numerous on sewing projects where 64 workers out of each 100 were assigned to this wage class. Workers in the unskilled "A" group were employed in relatively large numbers on road and street and conservation projects; more than 70 out of each 100 workers on these types of work were assigned to this wage class. Nonconstruction projects as a group utilized relatively more intermediate or semiskilled persons than did any kind of construction work. Skilled and professional and technical workers were required in relatively large numbers on the various professional and service projects. Public building projects were the only major type of construction activity on which more than a fourth of the workers were classified as skilled, and no construction projects required more than a small representation of professional and technical personnel.

### Hours and Earnings of WPA Workers

Persons employed on WPA projects are usually required to work 130 hours each month. For their work they are paid wages specified in a monthly earnings schedule which provides for variation in earnings on three bases: the region of the country in which the worker is located, the degree of urbanization (based on the population of the largest municipality) of the county in which he is employed, and the degree of skill required for the job to which he is assigned (wage class). These regulations are discussed in some detail on pages 83 to 85 of this report.

Provisions of the ERA Act of 1939 changed the requirement concerning hours of work considerably and necessitated some modification in the schedule of earnings. Prior to July 1, 1939, it had been required that the hourly rates paid to WPA workers should be the same as those prevailing locally for work of a similar nature. The application of this provision within the framework of a monthly earnings schedule meant that each worker was employed for whatever number of hours it was necessary for him to work at the local hourly rate for his skill to enable him to earn his assigned monthly wage. Skilled building construction workers, for instance, received hourly rates that were higher than those paid to unskilled laborers, and con-

sequently they were required to work fewer hours per month. Among the skilled workers themselves there were wide hourly rate variations which therefore occasioned variations in the required hours of work per month. Many different work schedules consequently had to be arranged for workers in different occupations. The 1939 Act required that all project employees should work 130 hours a month, with certain specified exceptions. The change to a standard number of hours greatly simplified the scheduling of project operations and also the timekeeping procedure.

The 1939 ERA Act provisions relating to the monthly earnings schedule required that the Commissioner of Work Projects set up a schedule which would not vary for workers of the same type in different geographic areas any more than could be justified by differences in the cost of living, and which at the same time would not substantially affect the then existing national average labor cost per WPA worker. The revised schedule became effective September 1, 1939. (The schedule is presented in Table 39, page 85.)

Full-time monthly earnings during the year ending June 30, 1940, increased slightly throughout the year and averaged about \$57.50. The increase was due in part to the new schedule and in part to variations in the relative amounts of employment in the various classifications which form the bases for differentials in the monthly earnings—the several wage classes, the different sections of the country, and the various community size groupings. Since workers may lose time during a payroll period because of interruptions in project operations, transfers between projects, and other factors outside of their control and because of time voluntarily lost through illness or other causes, actual earnings of workers employed during the year averaged several dollars less than full-time earnings, or about \$54 a month. Project workers are permitted to make up time lost involuntarily but they are not always able to do so in full.

During the fiscal year 1940, employees worked a total of more than 2,900,000,000 hours on projects operated by the WPA. About 1,239,000,000 hours, or 42.6 percent of the

total, were spent on highway, road, and street projects which typically employ large numbers of unskilled workers. Projects involving work on sewer systems and other utilities accounted for nearly 10 percent of the total or more than 282,000,000 hours of work. Persons employed on public buildings projects worked some 234,000,000 hours and those on projects for the development of recreational facilities over 174,000,000 hours. Nonconstruction activities accounted for more than 734,000,000 hours, or about a fourth of the total for projects of all types. Sewing projects on which nearly 238,000,000 hours were spent by project workers were outstanding among the nonconstruction projects.

TABLE 18. TOTAL HOURS WORKED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT

| Type of Project                                    | CUMULATIVE THROUGH AND YEAR ENDING JUNE 30, 1940 |          |                           |          |

| Recreational facilities, excluding buildings ..... | 1,186,686,897                                    | 8.2      | 174,113,124               | 6.0      |
| Sewer systems and other utilities .....            | 1,329,328,023                                    | 9.2      | 282,231,600               | 9.7      |
| Airports and airways .....                         | 208,361,556                                      | 1.4      | 35,730,255                | 1.2      |
| Conservation .....                                 | 616,813,881                                      | 4.3      | 99,020,475                | 3.4      |
| Sanitation .....                                   | 396,701,310                                      | 2.8      | 51,508,736                | 1.8      |
| Sewing .....                                       | 1,342,464,687                                    | 9.3      | 237,854,239               | 8.2      |
| Professional and service, excluding sewing .....   | 1,909,462,650                                    | 13.7     | 496,136,625               | 17.0     |
| Miscellaneous .....                                | 360,798,239                                      | 2.5      | 61,714,675                | 2.1      |

Comparison of the relative numbers of hours worked during the fiscal year 1940 on different types of projects with a similar distribution for the entire period of WPA operations reveals certain changes in emphasis. (See Table 18.) Highway, road, and street projects and the various kinds of professional and service work increased in relative importance during the last fiscal year while the percentage of total hours spent on recreational facilities, conservation, sanitation, and sewing projects declined, relative to earlier periods. Road work, nevertheless, accounted for more than two-fifths of the total of 14,419,000,000 hours worked on WPA projects during the five years since the program was initiated.

# FINANCIAL SUMMARY

FUNDS used for operation of the Work Projects Administration program during the year ending June 30, 1940, were appropriated by the Emergency Relief Appropriation Act of 1939, which was enacted into law on June 30, 1939. The act provided a specific appropriation of \$1,477,000,000 for the WPA and reappropriated the unobligated balances of funds made available to it under prior Emergency Relief Appropriation Acts.<sup>1</sup> Funds carried over from prior acts amounted to \$42,824,000. The gross amount available to the Work Projects Administration for the fiscal year, therefore, aggregated \$1,519,824,000.

Deductions from the gross amount available to the WPA totaled \$579,000 as of June 30, 1940, including \$500,000 of the funds transferred to the Division of Procurement of the Treasury Department for the work relief supply fund, which is a revolving fund to facilitate central purchasing of supplies and materials, and \$79,000 transferred to the Federal Works Agency for administrative expenses. This left a net sum of \$1,519,245,000 available for project operations and administrative costs of the WPA and for allocation to other Federal agencies for the operation of projects similar in type and in labor requirements to those of the WPA. The net amount available was approxi-

mately one-third less than the amount available for the same purposes during the fiscal year ending June 30, 1939.

## Allocations

By the end of June 1940, \$1,401,393,000 of the \$1,519,245,000 made available for the WPA program had been allocated for projects to be operated by the WPA. Allocation of the remainder of the available funds has been largely determined by statutory provisions. Under one of these provisions a maximum of \$53,950,000 was authorized for administrative expenditures; the sum of \$53,661,000 had been allocated for such purposes by June 30. The ERA Act of 1939 (in section 11) authorized the Commissioner of Work Projects to transfer

TABLE 19. AMOUNT OF FUNDS AVAILABLE TO WPA DURING THE YEAR ENDING JUNE 30, 1940

|                                                   |                 |
|---------------------------------------------------|-----------------|
| Specific appropriation, ERA Act of 1939           | \$1,477,000,000 |
| Balances available from prior ERA Acts            | 42,824,000      |
| Total funds available to WPA                      | 1,519,824,000   |
| Transfer of WPA funds to:                         |                 |
| Federal Works Agency, for administration          | 79,000          |
| Procurement Division, for work relief supply fund | 500,000         |
| Net funds available to WPA                        | \$1,519,245,000 |
| Projects operated by WPA                          | \$1,401,393,000 |
| WPA expenses for administration                   | 33,660,944      |
| Allocations to other Federal agencies             | 539,944,163     |
| Miscellaneous (tornado relief and damage claims)  | 42,000          |
| Undistributed                                     | 4,214,002       |

<sup>1</sup> Net funds available to WPA include \$9,884,299 of 1938 Act funds which continued to be available for obligation through provisions of the 1939 Act; of this amount, \$7,685,376 was available for projects operated by WPA and \$2,198,923 for WPA projects operated by other Federal agencies.

Source: U. S. Treasury Department report on the status of funds and analyses of expenditures under the ERA Acts of 1935, 1936, 1937, 1938, and 1939, as of June 30, 1940.

The ERA Act of 1939 also contained appropriations for the National Youth Administration programs; for the rehabilitation and relief programs of the Farm Security Administration, the Puerto Rico Reconstruction Administration, and the Bureau of Indian Affairs, and for administrative expenses incurred by various Federal agencies in carrying out the purposes of the act.

funds up to \$60,000,000 to other Federal agencies for the operation of projects similar to those prosecuted by the WPA, with the stipulation that not more than 1 percent of the allocations to each agency might be spent for administrative expenses.<sup>2</sup> By the end of June 1940, \$57,736,000 of newly appropriated funds and \$2,198,323 of 1938 Act funds that were still available for obligation were allocated for projects operated by other Federal agencies bringing the total available for that purpose during the fiscal year to \$59,934,463. Of this total, \$2,116,000 was for administrative purposes. Small amounts of the WPA funds were set aside for miscellaneous purposes (\$7,000 for settlement of property damage claims; and \$35,000 for direct relief of persons made destitute by the June 1939 tornado in Minnesota, as authorized by Public No. 160, 76th Congress, approved June 30, 1939). A balance of \$4,214,000 from the total WPA appropriation remained undistributed on June 30, 1940.

Twenty-eight Federal agencies received allocations from the \$57,736,000 transferred by the WPA. As is shown in Table 20, \$17,512,000 was made available to the Quartermaster Corps of the United States Army for the construction or improvement of buildings and utilities, landing fields, roads, recreational facilities, and other work at forts and other army posts. The Bureau of Yards and Docks of the Navy Department received \$10,000,000 for new construction and improvement work at the principal naval bases on the Atlantic and Pacific coasts. WPA funds were allocated to numerous agencies of the Department of Agriculture during the year. The Forest Service extended its work of conservation and development of forest and range areas with an allocation of \$6,619,000; the Bureau of Entomology and Plant Quarantine received \$5,883,000 for further work in the control and eradication of insect pests and plant diseases; and the Soil Conservation Service enlarged its program of erosion control and other soil conserving measures with an allocation of \$4,643,000. To the National Park Service in the Department of

TABLE 20. AMOUNT OF WPA FUNDS ALLOCATED TO FEDERAL AGENCIES FOR WPA PROJECTS UNDER THE ERA ACT OF 1939, BY AGENCY

CUMULATIVE THROUGH JUNE 30, 1940

| Agency                                             | Total        | Work Projects | Administrative |
|----------------------------------------------------|--------------|---------------|----------------|
| Total                                              | \$57,736,140 | \$55,619,843  | \$2,116,297    |
| Department of Agriculture                          | 18,116,541   | 17,392,147    | 724,394        |

<sup>2</sup> The 1938 Act funds allocated to the National Resources Planning Board of the Executive Office of the President were transferred to the General Land Office of the Department of the Interior in January 1940.

Source: U. S. Treasury Department report on the status of funds and analyses of expenditures under the ERA Acts of 1935, 1936, 1937, 1938, and 1939, as of June 30, 1940.

the Interior was transferred \$5,693,000 for the further development of public recreational areas in national parks. The Bureau of Labor Statistics received an allocation of nearly two million dollars (\$1,987,000). Smaller amounts were transferred to the other agencies.

The status of funds—the amounts allocated, obligated, and expended—that were appropriated to the WPA under the ERA Act of

<sup>2</sup> The 1938 Act had authorized the allocation to other Federal agencies of an amount up to \$88,000,000 out of the \$2,250,000,000 appropriated to the WPA by that act for the fiscal year 1939.

1939, as well as the status of the 1938 Act funds, as of June 30, 1940, is shown by agencies in Table VIII of the appendix.

## Expenditures of WPA Funds

WPA expenditures of Federal funds during the year ending June 30, 1940, totaled \$1,520,106,000. This amount includes not only expenditures of funds appropriated by the ERA Act of 1939, but also checks issued in liquidation of obligations which had been incurred under prior acts and were carried over into the fiscal year 1940.

Approximately 93 percent, or \$1,408,572,000, of the expenditures were made for projects operated directly by the WPA. (These Federal funds used on WPA project operations are analyzed in connection with sponsors' expenditures in a following section.) Small amounts totaling \$47,300 were spent for the relief of victims of the Minnesota tornado, for settlement of property damage claims, and for final payments in connection with the surplus clothing program and the aid to self-help and cooperative associations initiated under the ERA Act of 1938. Administrative expenses for activities conducted by the WPA amounted to \$53,171,000. Expenditures of \$58,316,000 were made from WPA funds transferred to other Federal agencies. Of this amount \$56,157,000

was spent on project operations and \$2,159,000 for administrative purposes. Expenditures under the various ERA Acts are shown by agencies in Table VIII.

## Trend of Expenditures

The expenditure of \$1,520,106,000 in Federal funds by the WPA in the year ending June 30, 1940, represents a reduction of 32 percent from the amount spent in the previous fiscal year during which WPA employment had reached a peak in the expansion of operations following the business recession that started in late 1937. Expenditures during the 1940 fiscal year were slightly higher (6.5 percent) than in the year ending June 30, 1938, were 16 percent lower than in the fiscal year 1937, and 21 percent above those in the fiscal year 1936 during which the WPA program was initiated and developed. The amounts of funds expended by the Work Projects Administration in the various fiscal years are given in Table 21 and are shown by states in Table IX of the appendix.

Month-to-month changes in WPA expenditures are determined primarily by changes in WPA employment which are analyzed in another section of the report. Total payments made during any given month, however, do not have a fixed relationship to the number of jobs provided in that period. Expenditure figures

<sup>a</sup> Does not include funds for NYA activities or WPA funds transferred under the ERA Acts of 1935 and 1936 for land utilization and rural rehabilitation programs administered by the Farm Security Administration.

<sup>b</sup> Includes NYA administrative expenses incurred prior to July 1939.

<sup>c</sup> Includes work project and administrative expenditures of WPA funds allocated under sections 3 and 11 of the ERA Acts of 1938 and 1939, respectively.

<sup>d</sup> Includes amounts for miscellaneous activities itemized in footnotes E and F, in addition to work project and administrative expenditures.

<sup>e</sup> Includes \$15,827,320 expended for purchases of surplus clothing and aid to self-help and cooperative associations.

<sup>f</sup> Includes \$47,332 expended for tornado relief, purchase of surplus clothing, aid to self-help and cooperative associations, and settlement of property damage claims.

Source: Based on reports of the U. S. Treasury Department.

do not fully reflect changes in employment immediately. Since workers are paid at semi-monthly intervals, as much as two weeks might elapse between a worker's initial assignment to a project and the receipt of his first pay check. Similarly, some time is required to check material deliveries and complete payments to vendors. Variation also arises because of differences in the number of project payroll periods ending within a month and other technical factors associated with payroll, purchasing, and accounting procedures.

The amounts expended from the beginning of WPA operations in July 1935 through June 1940 are presented by quarters in Table 22 and by months in the accompanying chart. The chart

CHART 7  
WPA EXPENDITURES\*

also depicts the average monthly rate for successive three-month periods. The moving average curve provides a more representative meas-

ure of the trend in WPA operations because it minimizes the time lag between employment and expenditures and irregularities arising from other technical factors.

During the first three months of fiscal year 1940, project operations declined steadily, partly because workers were being discharged under the provision prohibiting more than 18 months' continuous employment more rapidly than replacements could be made. By the end of the quarter, funds were being spent at a level only slightly above the monthly rate which prevailed in the autumn of 1937, when project employment was at the lowest point reached after the program got fully under way in the latter part of 1935. (See Chart 7.) The normal increase in WPA employment that begins with the approach of the winter season raised the monthly rate of expenditures gradually in the months from October through December 1939. During the next two months the unusually severe weather conditions which prevailed over large sections of the country curtailed project operations, prevented the employment of a full quota of workers, and resulted in loss of working time on the part of many employees. In March, however, operations were expanded to allow the workers to

make up time lost involuntarily, and expenditures increased about \$20,000,000 over the January-February level. Workers continued to make up lost time during the spring, and because of this factor and the normal lag of expenditures the totals for April and May showed only moderate declines from the March peak. Over the entire 12-month period, July 1939 through June 1940, WPA expenditures averaged \$126,700,000 per month, as compared with approximately \$185,900,000 per month during the 1939 fiscal year.

### Objects of Expenditures

Ninety-one percent of the total expenditures made from WPA funds in the fiscal year 1940 for programs operated by the WPA and other Federal agencies represent payments for wages and salaries. For this purpose \$1,384,489,000 was expended. Most of this sum was used for wages of workers employed on projects operated by the WPA; the total also includes salaries of administrative employees. Eight percent of all WPA expenditures is used in procuring materials, supplies, and equipment and office space. The remainder, amounting to 1 percent, is used for contractual services, such as light, heat, and

communications, and for special grants, such as that for tornado relief, and for other miscellaneous items. During the year ending June 30, 1940, the value of materials, supplies, and equipment purchased totaled \$90,816,000, rent for equipment and buildings amounted to \$26,971,000, and contractual services and miscellaneous items cost \$17,830,000.

Personal services represented a slightly smaller percentage of the funds transferred to other agencies than of funds expended directly by the WPA, as shown in Table 23. Differences also exist in the relative amounts expended for the various nonlabor purposes; a somewhat larger portion of the transferred funds than of the funds used directly by the WPA have been spent for purchases of materials, supplies, and equipment, and relatively smaller amounts for rent.

### Administrative Expenditures <sup>3</sup>

A total of \$53,171,000 was spent for the administration of the WPA during the year ending June 30, 1940. This amount represents a reduction of more than a fourth from the amount spent during the previous year. The total for the year constitutes the lowest annual amount spent by the WPA for administration in the five years of its existence. (See Table 21 above.) It should be noted that administrative expenditures in previous years included the cost of administering the NYA program, which was operated as a part of the WPA program. This cost, however, represented only a small proportion of the administrative expenditures; even with an expanded and independent program in the fiscal year 1940 the NYA has spent only \$4,583,000 for administrative purposes.

Statutory limitation was placed on the amount that might be expended by the WPA for administrative purposes from the funds appropriated in the ERA Act of 1939. A provision of this act set \$50,000,000 as the maximum that might be so expended, with sublimitations as follows: \$42,500,000 for salaries,

\$4,200,000 for travel, \$600,000 for communications, and \$500,000 for printing and binding. When these amounts proved to be insufficient for the effective administration of the WPA program, changes in the limits were authorized in the First Deficiency Appropriation Act, 1940, approved April 6, 1940. The new limitations set the total at \$53,950,000; raised the salary limitation to \$44,700,000, the amount for travel to \$4,575,000, and the amount for communications to \$725,000; and lowered the limitation on printing and binding to \$475,000 from \$500,000. The revised sublimitations totaled \$50,475,000, leaving \$3,475,000 to be spent on other items of administrative cost, such as supplies and materials, and rent of office space. The expenditures listed in Table 24 include checks issued during fiscal year 1940 to liquidate obligations incurred under earlier acts in addition to expenditures made against the several sublimitations of the 1939 Act.

Most of the administrative expenditures were made for the salaries of the administrative staff. During the year ending June 30, 1940, salary payments amounted to \$43,583,000, or 82 percent of all administrative costs. An average of 26,900 persons were employed in administrative work during the year—the smallest number to be employed during any year of WPA operations. The number of administrative employees represents a reduction of 21

TABLE 21. AMOUNT OF WPA FUNDS EXPENDED FOR ADMINISTRATION OF WPA, BY OBJECT OF EXPENDITURE <sup>A</sup>

| Other                                          | 38,136       | 0.1     |

<sup>A</sup> Does not include administrative expenditures of WPA funds allocated to other Federal agencies under sections 3 and 11 of the ERA Acts of 1938 and 1939, respectively.

Source: Based on reports of the U. S. Treasury Department

Not included in this section are the funds transferred to other Federal agencies for administrative costs in connection with projects operated by them with transferred WPA funds.

percent from the average of 34,100 employed during the year ending June 30, 1939. Most of the administrative personnel are located in state and local offices; employment in these offices averaged 25,100 persons during the past year. An average of 1,500 persons were working in the central office in Washington. The remaining 300 administrative employees were persons employed in regional offices and other field employees.

Other administrative expenditures included \$6,077,000 for travel, communication, and other contractual services; \$2,076,000 for purchases of materials, supplies, and equipment; and \$1,398,000 for rent of buildings and equipment. Expenditures for administrative purposes during the fiscal year 1940 are shown in detail in Table 24.

### Sponsors' Expenditures

The WPA, although a Federal program, is operated in close cooperation with state and local public bodies (and to a limited extent, other Federal agencies) which not only sponsor the initiation and prosecution of projects but also participate in financing them. From the beginning of the program through June 1939, sponsors expended steadily increasing amounts each year for projects operated by the WPA. In the year ending June 1940, sponsors' expenditures slightly exceeded the amount expended

in the preceding year, even though WPA funds had been reduced by about a third. Their contributions in the year ending June 30, 1940, amounted to \$194,378,000. Sponsors' expenditures in the fiscal year 1939 totaled \$493,939,000, having increased from \$371,608,000 in the fiscal year 1938, \$300,604,000 in the fiscal year 1937, and \$132,890,000 in the fiscal year 1936.

Source: WPA expenditures based on reports of the U. S. Treasury Department; sponsors' expenditures based on WPA state office reports.

In terms of the percentage of total project costs as well as in the absolute amount of expenditures, sponsors have increased their financial participation in project operations throughout the period of the WPA program. The percentage of total costs paid by sponsors, however, is necessarily affected by the level of WPA activities; a large volume of WPA employment with its consequent high level of WPA expenditures is associated with relatively smaller sponsors' contributions notwithstanding the fact that sponsors have increased the absolute amounts of their expenditures in times of expanding employment. This tendency reflects the greater financial ability of the Federal Government to deal quickly with changes in unemployment and, conversely, the less flexible financial resources of the states and localities.

CHART 8  
WPA AND SPONSORS' EXPENDITURES ON PROJECTS OPERATED BY WPA, BY FISCAL YEAR AND BY SOURCE OF FUNDS

Sponsors' expenditures represented 26 percent of total project costs during the 1940 fiscal year—a higher percentage than in any earlier period. The ratio averaged 25 percent during the July-September quarter, 27 percent during the period from October through December, 24 percent during the first three months of 1940, and 27 percent from April through June. The percentage for each fiscal year, together with the actual amounts of sponsors' funds and WPA-Federal funds expended, are presented in Table 25.

The ERA Act of 1939 provides that at least 25 percent of the cost of all non-Federal projects approved after January 1, 1940, shall be paid by sponsors. This regulation applies to the aggregate of all non-Federal projects within a state, enabling sponsors to balance a relatively low contribution rate on some individual projects with higher rates on others. Since many of the projects in operation during the last half of the fiscal year had been approved prior to January 1, expenditure figures for the year reflect only partially the effect of this provision.

Sponsors' funds, for the most part, consist of funds supplied by highway and street commissions, departments of health, welfare, and education, and similar agencies of municipalities, states, counties, townships, or other public bodies. Relatively small amounts of Federal funds are supplied by Federal agencies such as the War and Navy Departments, the Veterans' Administration, the Forest Service, and the Bureau of Entomology and Plant Quarantine, which also sponsor projects operated by the Work Projects Administration.

### WPA and Sponsors' Expenditures on Projects Operated by WPA <sup>4</sup>

The \$494,378,000 provided by sponsors for the financing of project costs during the year ending June 30, 1940, supplemented expenditures of \$1,408,572,000 from Federal funds appropriated to the WPA. In the aggregate, \$1,902,950,000 of sponsors' and WPA money

were used during the fiscal year in the prosecution of WPA work projects. This sum represents a reduction of approximately one-fourth from the total amount expended for projects operated by the WPA during the previous fiscal year. Total project costs are shown by states and by sources of funds and objects of expenditure in Tables XII and XIII of the appendix.

### Objects of Expenditures

Most of the WPA funds spent for projects operated by the WPA are used to pay the wages of project workers. The larger share of sponsors' funds, on the other hand, is spent in the procurement of supplies, materials, and equipment for project operation. Wage costs accounted for nearly 92 percent of the WPA funds expended during the fiscal year 1940 and for only 16 percent of sponsors' funds. Wage payments made by sponsors were for engineers, supervisory personnel, operators of heavy equipment, and other key personnel not available among persons certified for WPA employment.

Of the total of \$1,902,950,000 expended on projects in the 1940 fiscal year, about \$1,368,986,000 was expended for wages and salaries.

CHART 9  
DISTRIBUTION OF WPA EXPENDITURES  
BY OBJECT OF EXPENDITURE\*

Year Ending June 30, 1940

<sup>4</sup> Not included in the following discussion are WPA funds expended on projects operated by other Federal agencies.

<sup>a</sup>Includes sponsors' purchases of land, land leases, easements, and rights-of-way.

Source: WPA expenditures based on reports of the U. S. Treasury Department; sponsors' expenditures based on WPA state office reports.

This sum represented 72 percent of the combined WPA and sponsors' funds expended on projects, a slightly smaller proportion than in previous years. The lower percentage reflects the greater relative importance of sponsors' funds which are expended for materials and equipment—in total project outlays. More than 94 percent of the wage payments were made from WPA funds. The 6 percent supplied by sponsors was expended for wages and salaries of specially qualified workers who were necessary for project operations.

Outlays for nonlabor purposes during the year ending June 30, 1940, totaled \$533,964,000 and included \$298,181,000 for materials, supplies, and equipment purchased, \$175,178,000 for rent of equipment, and \$60,605,000 for rent of buildings, contractual services, and miscellaneous items. Table 26 presents the distribution of these amounts by source of funds.

### Average Expenditures per Worker Employed

The cost to the Federal Government of employing a worker for a month on projects operated by the WPA averaged about \$61.50 during the year ending June 30, 1940. Of this amount approximately \$54.25 was paid out in wages to the worker, \$5.00 was for materials and other non-labor items required for project operations, and \$2.25 for administration. In addition to WPA expenditures, project sponsors expended, on the average, about \$21.00 per month per worker paid from WPA funds.

The new earnings schedule which went into effect September 1939, raised average full-time

earnings slightly and thus tended to increase the basic earnings. This increase was somewhat offset by the lower limitation on the amount of WPA funds that might be expended for nonlabor costs (\$6 per worker per month instead of the \$7 permitted in the previous year). The average expenditure per worker employed was further reduced in the course of the year by the fact that unusually severe winter weather caused an abnormally large amount of lost time and not all of the time lost could be made up. The net effect of the various factors was an increase of about one-half dollar over the average cost per worker per month of the preceding year. The distribution by object of expenditure was only slightly changed from that obtaining in the year ending June 30, 1939, the labor cost increasing by a small amount. The distribution of outlays of Federal funds during the fiscal year 1940 by object of expenditure is shown in Chart 9 in terms of percentages.

Sponsors' expenditures per worker per month, on the other hand, increased by more than \$6.50 or about 50 percent. Of this amount approximately \$5.50 represented increased expenditures for nonlabor costs.

### Nonlabor Costs

Many different kinds of materials, supplies, and equipment, ranging in variety from spools of cotton thread to pile drivers, are required for the operation of WPA projects. Practically every kind of construction material is used as well as many goods of a nonconstruction nature.

Some machinery and equipment is purchased for use on projects but most of it, especially heavy and expensive equipment, is rented.

More than half (57 percent) of all project expenditures for nonlabor purposes have been made for the purchase of materials, supplies, and equipment. From the beginning of WPA operations through June 30, 1940, such purchases from many branches of industry have amounted to \$1,335,384,000 of which sponsors contributed 61 percent. Of this amount, \$298,181,000 was spent during the 1940 fiscal year, \$81,007,000 from Federal and \$217,174,000 from sponsors' funds. Equipment rent accounted for more than a third of the total nonlabor expenditures during the entire period through June 1940; the amounts spent for this

purpose totaled \$820,505,000 of which \$526,643,000 was provided by project sponsors. The remainder of the nonlabor expenditures were made for rent of buildings, heat, light, and other contractual services and for purchases of land by sponsors. Expenditures for these various purposes during the entire period of WPA operations through June 1940 are shown by source of funds in Table 27.

For the operation of a program involving highway and other construction activities as extensive as those of the WPA, large expenditures are necessary for construction machinery such as paving equipment, road scrapers, power shovels, electrical machinery, trucks, and tractors. Payments for all equipment rented or purchased totaled \$887,476,000 from both

TABLE 27.—AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED FOR NONLABOR PURPOSES ON PROJECTS OPERATED BY WPA, BY TYPE OF PURCHASE OR RENT AND BY SOURCE OF FUNDS

CUMULATIVE THROUGH JUNE 30, 1940

| Type                                                      | Total           |         | Sponsors' Funds |                  |
|-----------------------------------------------------------|-----------------|---------|-----------------|------------------|
|                                                           | Amount          | Percent | Amount          | Percent of total |
| Total                                                     | \$2,359,155,760 | 100.0   | \$899,614,823   | 63.1             |

A Not elsewhere classified.

B Includes space rents, contractual services such as light and telephone, land leases and easements, and other miscellaneous expenditures.

Source: WPA state office reports.

WPA and sponsors' funds through June 30, 1940. This amount comprises about 38 percent of all nonlabor expenditures during the entire period. Under the provisions of the ERA Act of 1939 construction equipment or machinery may not be purchased from WPA funds unless they cannot be rented at prices which the Commissioner determines to be reasonable. Practically all of the equipment provided by sponsors is also rented. Of the total expended for machinery and equipment since the beginning of operations, over nine-tenths has been for rented equipment.

The construction aspects of the WPA program are also evident from the predominance of construction materials among purchases made for project purposes. Stone, clay, and glass products—chiefly cement, sand and gravel, and crushed stone—required the largest expenditures. Approximately \$464,565,000, or about 20 percent of all nonlabor expenditures through June, was spent for purchases of this kind of material. A large quantity of metal products was also used; about \$265,615,000 was spent for cast-iron pipe and fittings, structural and reinforcing steel, and other metal products.

Lumber and lumber products and bituminous mixtures for paving and other purposes were also purchased in large volume, requiring the expenditure of \$135,513,000 and \$116,257,000, respectively. Other relatively important types of construction materials were chemicals and allied products for which \$41,352,000 was spent, and petroleum products, purchases of which totaled \$34,580,000. Textiles are the principal nonconstruction material purchased in large quantities and are used chiefly on sewing projects; expenditures for textiles during the entire period amounted to \$88,578,000. Amounts expended for these and other items of materials, supplies, and equipment are shown by source of funds in Table 27.

### Types of Projects

Construction activities accounted for three-fourths of the total expenditure of \$1,902,950,000 in WPA and sponsors' funds for projects operated by the WPA during the year ending June 30, 1940. Twenty-four percent of the total

was used for education, health, sewing, and other professional and service projects.

Among the various types of projects, highway, road, and street work predominated, as it has since the initiation of the WPA program. The \$791,863,000 spent for this type of work represented nearly 42 percent of the year's total. Second in importance among construction activities are projects involving the construction or improvement of sewer and water supply systems, and other public utilities which accounted for about \$199,839,000, or nearly 11 percent of total expenditures from Federal and sponsors' funds. A total of \$183,448,000 was expended for the construction and improvement of public buildings. Work on recreational facilities, excluding recreational buildings, utilized about \$119,000,000 or 6.3 percent of the total. The other major types of construction work—conservation projects, airports and airways, and sanitation projects—represented 3.4, 2.0, and 1.6 percent, respectively, of the total expenditures made during the fiscal year.

Community services, such as educational and recreational activities, arts programs, and library and museum work, accounted for more than one-fourth of the expenditures for nonconstruction work and represented nearly 7 percent of the total project costs during the fiscal year. Expenditures for sewing projects represented 6 percent of the total; 5 percent was expended for research and records projects and 5 percent for welfare projects other than sewing, including, among other activities, projects involving housekeeping aid to families in need, school lunches, distribution of surplus commodities, and health work.

The types of work accomplished on the WPA program, of course, vary considerably from state to state, because of such factors as geographic, industrial, and economic differences, population concentration, the construction needs and financial resources of local communities, and other state characteristics. Road and street construction was the most important type of work in most states, but was more important in some than in others. In five states (Alabama, Arizona, Arkansas, Tennessee, and West Virginia) more than 60 percent of the total expenditures during the year were made for projects on highways, roads, and streets. On

CHART 10

## WPA AND SPONSORS' EXPENDITURES ON PROJECTS OPERATED BY WPA, BY TYPE OF PROJECT

Year Ending June 30, 1940

In general, the sponsors' share of the total cost of projects which require a relatively large outlay for materials and other nonlabor costs is relatively high. For example, in the fiscal year 1940 sponsors provided 40 percent of all costs of airport and airway projects and 30 percent

the other hand, this type of project accounted for less than a fifth of the total expenditures in California, Rhode Island, and the District of Columbia. Work on public buildings represents a much larger part of total project expenditures in the western states of New Mexico, Oklahoma, Utah, Arizona, and California and also in South Carolina and New York than in the country as a whole. In Hawaii, nearly half the work during the year has been on public buildings. Relatively large expenditures for the extension of sewer systems and other utilities were made in several New England states and in Delaware. Conservation work has continued to be concentrated in the Far West and in some of the New England states in which the September 1938 hurricane caused extensive damage. Variations in the relative importance of other types of work in the several state programs are shown in Tables XIV and XV of the appendix.

Sponsors of all types of projects operated by the WPA provided 26 percent of the total cost during the fiscal year 1940 as compared with a cumulative average of 19 percent over the entire period of the program's operation.

TABLE 28. AMOUNT OF WPA AND SPONSORS' FUNDS EXPENDED ON PROJECTS OPERATED BY WPA, BY MAJOR TYPE OF PROJECT AND BY SOURCE OF FUNDS

CUMULATIVE THROUGH AND YEAR ENDING JUNE 30, 1940

\* Includes adjustment of WPA expenditures to total reported by the Treasury Department, sponsors' expenditures for land, land leases, easements, and rights-of-way, for which the distribution by type of project is not available; and projects not included under the headings above.

Source: WPA state office reports.

of the costs of public buildings projects, which require more materials and equipment than do some other types of work. The sponsors' share of the total cost is lower, on the other hand, for projects requiring relatively small nonlabor expenditures, such as certain conservation activities and many types of professional and service work, since the wages of all cer-

tified workers are paid from Federal WPA funds.

Detailed data on expenditures for each type of project by source of funds and object of expenditures from the beginning of the program through June 30, 1940, are shown in Table X of the appendix, and for the year ending June 30, 1940, in Table XI.

# PROJECT ACCOMPLISHMENTS

**A** BASIC requirement of the WPA program is that workers shall be employed on projects of a useful nature. Project work performed by WPA employees has involved many kinds of activity and has produced a wide variety of useful public improvements and public services. Most of the work has been directed towards the improvement and extension of physical facilities for transportation, education, recreation, public health and sanitation, and welfare, and facilities required in the performance of other government functions. More adequate highway and street systems; new airports; thousands of new and improved school buildings, hospitals, and other public buildings; additional sewage and water treatment facilities; and many other achievements that are tangible and enduring have resulted from WPA construction work. Significant contributions to the scope and quality of public services have resulted from the nonconstruction projects through which instruction, recreational leadership, personnel for planning and research, and other kinds of assistance have been made available to the various communities.

Town, city, county, and state governments and other public sponsoring agencies have taken the initiative in the WPA undertakings. They not only propose the projects and participate actively in their operation, but they also contribute about one-fourth of the total project costs. Local sponsorship under these conditions assures the prosecution of projects adapted to meet the specific needs of the individual community. The influence of local conditions also

appears in the selection of projects that are adapted to the occupational abilities of the workers referred to the WPA by local welfare authorities.

## Transportation and Communication

Improvement and extension of facilities for transportation and communication, important elements of the social and economic life of the Nation, have always predominated in the WPA program. Projects of this type—principally work on roads and streets but also including work on airports and air navigation facilities and aids to water transportation—have accounted for about two-fifths of all expenditures of project funds.

Road work is especially suitable for operation under the WPA program. Since the demand for improved roads and streets is constantly being brought to the attention of public officials in all sections of the country, practically every community has requested WPA projects relating to transportation facilities. Road improvement is a type of work that can readily be performed by the unskilled or semiskilled manual workers who constitute the majority of the persons for whom WPA jobs are required. Road projects have the additional characteristic of permitting the flexibility of operation needed on the WPA program. Work on roads and streets can be curtailed or suspended during harvest seasons when WPA workers are able to obtain temporary agricultural employment, and it can be

| Other roads        | 7,573   | 1,608             | 5,965                           |

expanded rapidly when economic and unemployment conditions make it necessary to increase WPA employment.

As a result of the operation of highway projects from the beginning of the WPA pro-

gram in the summer of 1935 through December 1939, the construction or improvement of 470,000 miles of roads and streets had been completed. This total included about 28,000 miles of new hard-surfaced roads and 23,200 miles of reconditioned highways with this type of surfacing. The extent of WPA road construction in each state is indicated in the accompanying map.<sup>1</sup>

Rural sections of the country have been the chief beneficiaries of WPA road work in terms of mileage. Roads constructed or reconstructed by WPA workers in rural areas totaled about 412,000 miles. On most of this mileage (383,000 miles) roadbeds were graded and drained and frequently surfaced with crushed stone or gravel. These are the roads, largely of the feeder or farm-to-market variety, which give the farmer year-round access to markets, shopping centers, schools, and churches and

<sup>1</sup> The total mileage of road work completed in each state is shown in Table XVIII of the appendix together with state distributions of certain other items of construction work, all of which is under the jurisdiction of the Engineering Division. Accomplishments on work in the non-construction field, performed under the jurisdiction of the Division of Professional and Service Projects, are shown by states for selected items in Table XVII.

Portions of Chicago's Outer Drive along Lake Michigan and a pedestrian overpass

Four hundred thousand miles of rural roads have been built or improved by WPA workers; the roads shown here are in Ohio (right) and Wisconsin (below)

permit regular mail delivery. A much smaller portion (29,000 miles) of the rural roads on which work was done had concrete, brick, blacktop, bituminous concrete, or macadam surfaces; these are mainly primary highways that link urban areas. Work on the roads ranged from completely new construction of road base and surface—including such operations as clearing, grubbing, excavating, grading, and surfacing—to the grading and stabilization of roadbeds.

In urban areas, much of the project work has been directed towards the reduction of traffic congestion. Streets that were built when the population was smaller and the traffic slower have to be reconstructed to meet modern conditions. This involves the widening of streets, replacing of old surfaces with more durable or suitable materials, and erection of traffic signs and traffic lights. Street work accomplished through WPA projects has been chiefly of this nature. New hard surfaces were laid on nearly 12,000 miles of streets and alleys, and 9,000 miles of such surfaces were rebuilt in the four and one-half years of WPA operations. In addition, nearly 30,000 miles of city streets and roads with dirt, clay, sand, and gravel surfaces were built or improved by the WPA (much of this mileage is in suburban areas.

Besides work on road bases and wearing surfaces, highway improvement requires the construction or reconditioning of many appurtenant structures, such as bridges, culverts, sidewalks, curbs, gutters, and guardrails. Under the WPA road building program, 57,200 new bridges and viaducts had been completed by the end of 1939. They average over 30 feet in length. Ten thousand of the new bridges are masonry or concrete structures which in many instances replace the single-lane spans of an earlier day and are wide and sturdy enough to support at least two-lane traffic. About 4,500 are of steel and average more than 50 feet in length, some being well over 100 feet. The majority of the new bridges, however, are built of wood. Half of the 42,500 new wooden bridges are in five southern states; Alabama and Mississippi together account for 11,600 of them. Many are small bridges but, nevertheless, fill a real need by replacing weakened structures

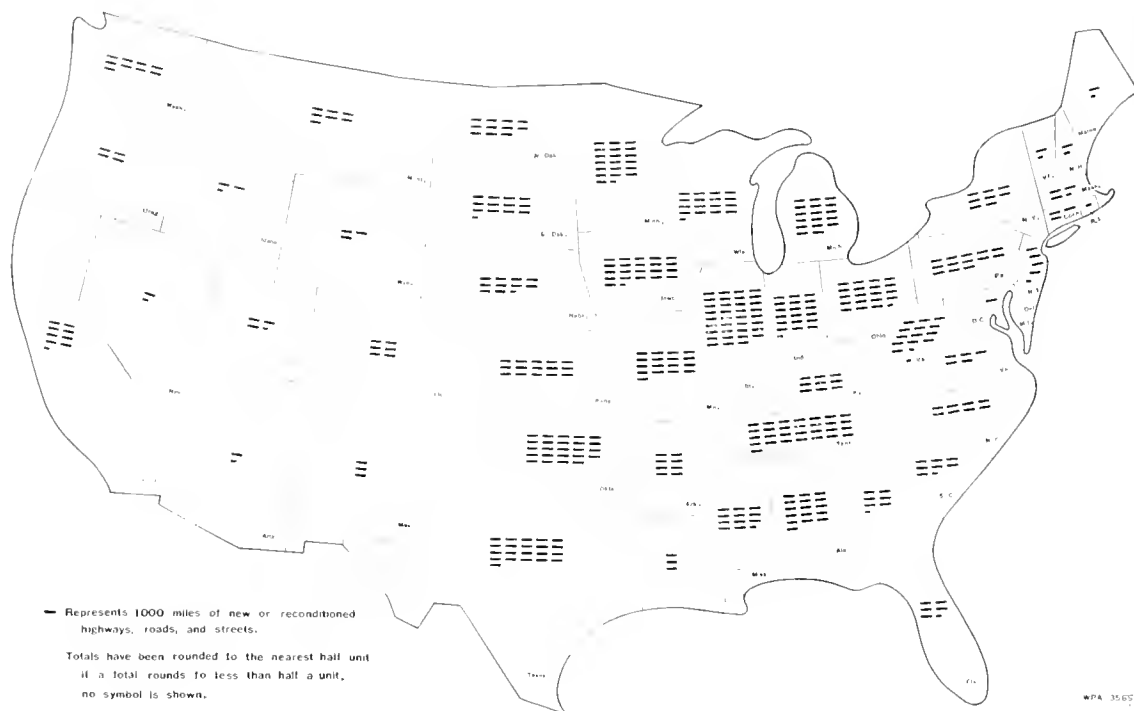

Lorings Bridge in Cortland County, New York, is one of the 10,000 concrete or masonry bridges built through WPA project activities

or by providing passage over a creek rather than through it. Other road appurtenances completed by WPA workers included the construction of 677,000 new culverts and the reconditioning of nearly 84,000 others, new construction of almost 19,000 miles and the improvement of 3,400 miles of curbs and gutters, and the completion of about 109,000 miles of drainage ditches of which approximately two-

fifths were newly dug. For the safety of motorists nearly 2,600 miles of guardrails and guardwalls were built or improved and 639,000 traffic signs were erected.

To facilitate night driving some 600 miles of road were equipped with 21,000 new light standards and on 1,400 miles of road about 58,000 light standards were reconditioned. The appearance and safety of 30,000 miles of highway were improved by the removal of stumps and other unsightly objects, planting of shrubs and trees, sodding and seeding of road shoulders and parkways, and other beautification work.

Closely related to the construction work done on roads and streets are the traffic surveys made by WPA workers. These frequently have led to changes that have reduced accidents and improved traffic conditions. Among the surveys was one conducted in the Chicago Park District which resulted in the construction of pedestrian subways, a grade separation, ramps, split drives, and improvements at

hazardous intersections designed to increase the range of visibility.

Project operations involving construction and improvement of airports and air navigation facilities have made important contributions to the development of the Nation's air transportation system and have involved work on about 90 percent of the airports that were air-line stops at the end of March 1940. Accomplishments in this field are discussed in some detail on pages 34 to 37 of this report.

Water transportation also has been facilitated by a number of project activities. These have included such work as the construction or reconditioning of docks, wharves, and piers and of jetties and breakwaters. A number of artificial channels and canals also have been constructed or improved. The extent of the work completed by the end of 1939 is shown in Table XVI of the appendix.

For improved communication services, WPA project workers have placed in conduits or strung 2,700 miles of telephone and telegraph line and have reconditioned more than 1,500 miles of line. Through this work the fire-fighting efforts of the Forest Service have been greatly facilitated and communication at army bases and on other Federally owned property has been improved. These totals do not include the 2,000 miles of police, fire alarm, and traffic signal lines which WPA workers have installed or reconditioned.

## Education

State and local governmental agencies responsible for the provision of educational opportunities in their respective communities have been aided in performing this function by activities of the WPA. Project workers have been instrumental in adding to and modernizing the educational plant and equipment of the communities and in providing instruction for groups of persons not covered by the usual public education programs.

That great need for construction and modernization of school buildings has existed in the United States for some time was indicated by surveys of the United States Office of Education and of the National Education Association. The NEA has estimated that several million

TABLE 31. SCHOOLS AND LIBRARIES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

| New construction and additions ..... | 161                 |
| Improvement .....                    | 761                 |

school children were improperly housed, in the sense that their classes were held in buildings condemned by public officials, in temporary buildings, or in buildings which could accommodate them only part time.<sup>2</sup> The Office of Education as a result of its study reported that about two-fifths of the school buildings in some 500 cities were more than 30 years old, with the comment that "school buildings which are more than 30 years old are, as a general rule, obsolescent from both an educational and construction standpoint."<sup>3</sup>

It is impossible to determine what proportion of the thousands of buildings that had been condemned as unsafe and of the other thousands that were temporary or otherwise inadequate have been replaced or modernized by WPA. Nevertheless, the 4,000 new school buildings that have been constructed through WPA project operations, the 1,500 additions built, and the 27,800 buildings renovated or modernized undoubtedly have resulted in considerable improvement in school facilities. The map on the next page indicates the number of educational buildings (schools and libraries) constructed or renovated in each state during the first four and one-half years of WPA program operations.

Much of the new construction work has involved replacing antiquated schoolhouses with modern buildings; frequently a consolidated school has replaced several old structures that were built before modern transportation made it possible for a school to serve a large area. A large proportion of the new schools have been built in the southern and southwestern states.

<sup>2</sup> "The Nation's School Building Needs," *Research Bulletin of the National Education Association*, Washington, D. C., National Education Association; Vol. XIII, No. 1, January 1935.

<sup>3</sup> Alice Barrows, *The School Building Situation and Needs*, Bulletin 1937, No. 35, Washington, D. C., United States Department of the Interior, Office of Education, 1938, p. 12.

Reconstruction work has been even more extensive than new construction. On many small rural school buildings sagging roofs and steps were replaced, and window sashes were repaired. New heating facilities and electric wiring were often installed to reduce fire hazards, new blackboards built, and badly needed painting and other desirable improvements effected. Work of this nature also was done on the buildings of city school systems. In many instances dilapidated school buildings with obsolete plumbing, heating, and lighting equipment and sometimes with serious structural faults, have been made into modern educational plants that have good lighting, heating, and toilet facilities.

Another way in which the WPA aids state and local governments in educational activities is in making available unemployed teachers to conduct classes for persons beyond school age and for preschool children from low-income families. To assure the integration of this project work with the state's regular school

system all projects for the employment of teachers are operated on a state-wide basis and are sponsored by state departments of education; units of the project are cosponsored by local boards of education and other local bodies. The classes conducted offer a wide variety of instruction and training, depending on the interests and needs of the students and on the training and experience of the unemployed teachers available. In January 1940, when a survey of the education program was conducted, enrollment in adult education classes alone totaled more than one million persons. (See Table XVII of the appendix for the state distribution.)

WPA literacy and naturalization classes are directed towards elimination of illiteracy and preparation of foreign-born persons for the responsibilities of citizenship. The need for this type of instruction is indicated by the 1930 census data, which reported about 4,000,000 persons 10 years of age and over as illiterate (unable to read and write) and more than

CHART 12

## EDUCATIONAL BUILDINGS CONSTRUCTED OR IMPROVED BY WPA

Cumulative Through December 31, 1939

3,000,000 persons of voting age as aliens. Illiteracy has been greatly reduced through WPA classes in reading and writing. Instruction does not stop there, however. Many of these people and others with only the most elementary training are enabled to continue their studies until they are functionally literate and can derive pleasure from the printed page. All instruction in naturalization classes is conducted in accordance with plans approved by the United States Immigration and Naturalization Service, and emphasis is placed on the principles of democratic government, the responsibilities of citizenship, and the history of the United States. Since ability to read and write English is one of the requirements for citizenship, literacy and naturalization work are closely related, and in a few states these classes are combined. About 293,000 persons were enrolled in WPA literacy and naturalization classes during a two-week period in January 1940 when a survey of the education program was made.

TABLE 32.—PUBLIC PARTICIPATION IN EDUCATION ACTIVITIES CONDUCTED BY WPA  
TWO-WEEK PERIOD IN JANUARY 1940

| Type of Activity                                                   | Unit of Measurement | Number  |
|--------------------------------------------------------------------|---------------------|---------|
| Adult education:                                                   |                     |         |
| Literacy and naturalization classes                                | Number of enrollees | 293,000 |
| Vocational training classes                                        | Number of enrollees | 191,000 |
| Correspondence courses                                             | Number of enrollees | 48,000  |
| Other                                                              | Number of enrollees | 534,000 |
| Lectures and forums                                                | Total attendance    | 161,000 |
| Nursery schools                                                    | Number of enrollees | 38,000  |
| Special instruction for institutionalized and handicapped children | Number of enrollees | 4,000   |
| Art instruction classes                                            | Number of enrollees | 47,000  |
| Music instruction classes                                          | Number of enrollees | 160,000 |

Classes in vocational training during the same period had an enrollment of approximately 191,000 persons. The objective of this instruction is to aid unemployed men and women in obtaining private employment through specialized training for various occupations. In family-life education the emphasis is not primarily on skills but rather on the effect of better homemaking upon family relationships. The improvement of family life may arise through discussions of such topics as diets, menu planning, child care and training, family relationships, home management, and home beautification. Also offered are classes in public affairs, in

which such local problems as sanitation or the provision of public recreational facilities are discussed. Other courses cover health education, where the emphasis is on safety, first aid, and home hygiene. In addition to those attending classes nearly 50,000 persons were receiving instruction through correspondence courses during the two-week period.

The WPA nursery school program is designed to serve children from relief or other low-income groups. The children are placed in an educational environment which provides opportunities for all-round development. The school day is so arranged as to bring to the children a consistent health program, a well balanced, nourishing noonday meal, and other advantages which they would be unable to enjoy at home. A regular well planned parent education program for mothers and fathers of children in the nursery school is an important phase of these nursery school projects. The 1,354 nursery schools in operation during the two-week period in January 1940 had an enrollment of about 38,000 children.

Other activities conducted under the education program include lectures and forums, art and music instruction, and special instruction given to handicapped children in hospitals, hospital schools, and homes. Lecture attendance totaled 161,000 persons, enrollees in art and music instruction aggregated 207,000, and handicapped children receiving special instruction numbered 4,000 in the survey period.

Some of the educational services initiated under the program have been taken over by state authorities as permanent features of their regular educational programs. This development has opened up new job opportunities for unemployed teachers and has resulted in the expansion of public services provided in the various communities.

Visual education aids for use in public schools have been produced by WPA workers employed on museum extension projects. Three dimensional models, maps, projection slides, models of derricks, and numerous other devices have been designed which bring pertinent subject matter within range of a child's sensory experience. Through a related group of projects museum staffs have been assisted in

The new South Ward School in McKinney, Texas, contains eight classrooms

classifying and indexing a wide variety of art, archeological, and historical materials.

In another educational field—that of library work—WPA project activities have resulted in marked contributions to the library facilities of many communities. Construction work has provided 161 new public libraries or additions and 761 renovated libraries. Furthermore, WPA workers have operated or assisted in the operation of thousands of public libraries; in December 1939 WPA employees served in approximately 9,400 libraries, among which were 135 bookmobiles operated for the benefit

of rural or other communities which had had inadequate library facilities. This work has been directed towards reducing the number of persons in the United States who are without library service; it is also expected that the library demonstrations provided will result in permanent increase of service through local appropriations for their continuance. Other phases of library work, not included in the work already mentioned, are the renovation of over 67,000,000 library books and the transcription of nearly 4,000,000 pages of Braille for the use of blind readers.

In addition to schoolhouses and libraries, other related work, such as the construction or improvement of administration buildings, dormitories, gymnasiums, stadiums, athletic fields, and water supply and sewage disposal facilities, has been done for public educational institutions. These accomplishments, however, are not included in the figures presented in this section; they are reported under recreation or other pertinent headings in the following pages.

### Recreation

In recent years the need for recreational facilities and services has been increasing steadily, far outstripping the development of these facilities and services in many communities. Public agencies have attempted to rem-

Bookmobiles are the means of circulating books in areas where library facilities are inadequate

edy this situation to some extent by sponsoring WPA projects for the construction of numerous parks, recreational buildings, and other recreational facilities and projects supplying leadership in the organization and direction of recreational activities.

In the course of WPA operations 6,900 new recreational buildings or additions have been completed for communities in all parts of the country. Included in this total are 411 auditoriums and over 1,000 gymnasiums; the remainder of the buildings are pavilions, bathhouses, park shelters, clubhouses, and various other structures for recreational purposes. Nearly 4,300 buildings of these types have been reconstructed, most of which are located in public parks or on school grounds.

Numerous recreational facilities other than buildings also have been constructed by WPA workers. Among them are 1,720 new or enlarged stadiums and grandstands, with accommodations for nearly 3,000,000 persons; 1,400 new or larger parks; over 2,400 school and city playgrounds; about 2,500 athletic fields; nearly 7,800 tennis courts; some 200 golf courses; 1,300 swimming and wading pools; approximately 1,000 ice skating areas; and nearly 300 miles of ski trails and 56 ski jumps. The number of these facilities reconstructed or improved exceeds the volume of new construction in many instances, as may be seen from Table 33. This is particularly true of parks and of

TABLE 33. RECREATIONAL FACILITIES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

| Type of Facility              | Cumulative through December 31, 1939 |           |                               |

| Outdoor theatres              | 115                                  |           | 23                            |

playgrounds; nearly 5,400 parks and 7,900 playgrounds were improved.

Some of the leadership and supervision required to make effective use of recreation facilities is furnished through WPA recreation projects. Recreation projects are operated on a state-wide basis with local cosponsorship of the activities. Community recreation councils represent the community point of view, indicate community recreational preferences, aid

This bathhouse and the adjoining swimming pool were built by WPA workers for the benefit of residents of Winfield, Kansas

in the planning and coordination of the local program, and assist in making materials and equipment available. The extent of public interest in the recreation program is indicated by the fact that in February 1939 some 5,500 community recreation councils were actively cooperating in the operation of the projects that provide leisure-time activities under the leadership of WPA workers.

Practically all the states and three-fifths of the 3,000 counties of the United States participate in the recreation program of the WPA. Although the recreation activities conducted vary somewhat with the section of the country and the time of year, they include nearly every sport and every type of recreation. According to the survey made in a week of February 1939,<sup>4</sup> the public devoted nearly 15,700,000 hours to recreation under the leadership of WPA workers. Hours spent by participants in the many kinds of physical recreation, such as snow and ice sports, basketball, gymnastics, and volley

ball, represented well over two-fifths (45 percent) of all hours spent in recreation activities. Social recreation, comprising indoor games, dancing, special events, and the like accounted for nearly a third (31 percent) of all participant

TABLE 34.—PUBLIC PARTICIPATION IN RECREATION ACTIVITIES CONDUCTED BY WPA

WEEK ENDING FEBRUARY 18, 1939

| Type of Activity                            | Number of Participant Hours |
|---------------------------------------------|-----------------------------|
| Total                                       | 15,680,000                  |
| Physical                                    | 7,016,000                   |
| Social (indoor games, folk dancing, etc.)   | 4,798,000                   |
| Cultural (arts, crafts, drama, music, etc.) | 3,337,000                   |
| Therapeutic                                 | 25,000                      |
| Children's play centers                     | 334,000                     |
| Other                                       | 172,000                     |

hours. Recreation with a cultural emphasis was third preference among participants in the program; about a fifth (21 percent) of the total hours were spent on this group of activities which included sculpturing, play production, sketching, painting, block printing, and instrumental and choral music as well as study groups devoted to the appreciation and history of art, music, and literature.

A relatively small part of the program consisted in the supervision of play in children's play centers and in the provision of therapeutic recreation in state hospitals, asylums, and other public institutions for handicapped and delinquent persons. These activities together consumed about 3 percent of the total participant hours. The number of participant hours for each major type of recreation activity supervised by WPA during a week in February 1939 is shown in the accompanying table.

## Public Health and Sanitation

Project sponsors and the WPA have cooperated in the operation of many projects designed to promote the public health, prevent the spread of disease, and provide healthful living conditions for the American people. These projects involve not only the construction and improvement of hospitals and of sewer and water supply systems and related drainage and mine-sealing work, but also the provision of direct medical and health services.

Treatment plant built to enlarge the sewage system of Atlanta, Georgia

<sup>4</sup> *Community Recreation Programs: A Study of WPA Recreation Projects*, Work Projects Administration, Washington, D. C., February 1940.

Among the WPA accomplishments in the public health field are the construction of 132 new hospitals and of 66 additions to hospitals or other buildings, and the improvement or renovation of about 1,500 others. Many of the newly built hospitals were provided for towns or communities which previously had been without hospital facilities of any kind. Others, such as the new building at Blythe, California—an isolated community of about 2,300 persons that was approximately 100 miles from any adequate hospital—replaced obsolete and inadequate structures. Taking the place of an emergency hospital housed in limited quarters, the new hospital has room for about 100 patients and contains a maternity ward and operating, sterilization, and X-ray rooms. Some of the new hospitals were designed to care for victims of particular diseases, such as tuberculosis and infantile paralysis, who require special care and equipment. The Morris Memorial Hospital at Milton, West Virginia, for example, is designed for the better care of victims of infantile paralysis and other crippling diseases. Work performed by WPA workers there included the installation of heating, plumbing, and electrical facilities and of operating room equipment. They also erected chlorinating and pumping equipment with which salt water from wells on the property is pumped into two therapeutic pools in the hospital building. Most of the 66 additions are new wings to provide increased ward space.

Also in the interest of public health is the work done in improving water supply and sewage disposal systems. Both the quantity

Assistance to child health clinics is one of the types of direct health service provided by WPA workers

and quality of the water supply of many communities have been improved by the work done on water treatment plants and pumping stations and by the installation or improvement of aqueducts, mains, and distribution lines. Over 130 new or enlarged water treatment plants were completed and 111 existing plants were renovated through WPA project operations. In most of these treatment plants water is chlorinated or otherwise treated to make it safe for drinking. WPA work at Hallock, Minnesota, has provided a modern water filtration and softening plant for residents who formerly had to haul water to town in tank wagons. Well water in this area, underlaid by beds of salt, was unfit for domestic use. The new plant purifies and softens nearly 300,000 gallons daily of the local surface waters, and its capacity can be increased to 430,000 gallons (adequate for a population of 5,000) by the addition of one filter unit. The 690 new or enlarged pumping stations and 228 reconstructed plants, together with 9,638 miles of new and 2,774 miles of improved aqueducts, water mains, and distribution lines, have materially increased the supply of water in many communities. Where facilities have been used to tap new sources, the quality of the water also was improved. Many communities have been provided with their first adequate water facilities through the WPA program; previously they had to depend on private wells and cisterns, and sometimes even on creeks for their supply of fresh water.

TABLE 35.—PUBLIC HEALTH FACILITIES CONSTRUCTED OR IMPROVED ON PROJECTS OPERATED BY WPA

CUMULATIVE THROUGH DECEMBER 31, 1949

| Type of Facility          | Unit of Measurement             | New Construction | Reconstruction or Improvement |
|---------------------------|---------------------------------|------------------|-------------------------------|
| Hospitals . . .           | Number                          | 3 198            | 1, 482                        |
| Water treatment plants    | Number                          | 3 133            | 111                           |
| Water lines               | Miles                           | 9, 638           | 2, 774                        |
| Sewage treatment plants   | Number                          | 3 591            | 320                           |
| Sewer lines               | Miles                           | 15, 460          | 3, 113                        |
| Pumping stations          | Number                          | 3 690            | 228                           |
| Garbage incinerators      | Number                          | 76               | 11                            |
| Mosquito control drainage | Miles of ditch, canal, and pipe | 13, 059          | 18, 106                       |
| Sanitary privies          | Acres drained                   | 1, 847, 000      | 1, 826, 000                   |
| Abandoned mine sealing    | Number of openings sealed       | 1, 761, 000      | 29, 000                       |
|                           |                                 | 173, 000         | -----                         |

\* Includes additions to existing facilities.

In many instances streams and lakes have been reclaimed for sport and recreation as a result of the construction or reconditioning of sewage disposal plants by WPA workers. Sewage and garbage that formerly polluted these waters is now neutralized in 594 new or enlarged treatment plants or reduced to harmless ash in the 76 new or 41 reconstructed incinerators. The installation of a sewage treatment plant usually calls for some extension or reconstruction of the sewer mains which often were planned to accommodate a much smaller load. For example, in one eastern city where a sewage treatment plant large enough to provide service for 30,000 persons has been added to existing facilities, five and one-half miles of intercepting sewers and three miles of lateral connecting sewers had to be laid. Some communities, whose residents have had no modern sanitary facilities, have been equipped with complete sewerage systems; illustrative of these is a small Ohio town where a treatment plant was constructed and nearly six miles of sewers laid by WPA workers.

Altogether, through December 1939, WPA workers had constructed 15,000 miles of storm and sanitary sewers and improved another 3,000 miles. These included pipe less than a foot in diameter as well as large mains with diameters of more than five feet. In rural regions where it is impractical to install sewage treatment systems, WPA workers have constructed 1,760,000 sanitary privies, nearly 800,000 of which were built in six southern states.

Another type of WPA work in the field of public health has been the sealing of openings of abandoned coal mines in order to prevent the entrance of oxygen which, together with water and the mineral pyrites found in coal veins, forms sulphuric acid. This acid, when present in streams, makes the waters unfit for drinking and stock watering, kills fish and vegetation along the banks, and damages locks, dams, waterfront structures, boats, and water systems. In the Ohio River basin, where the mine-sealing program of WPA has been a major factor in improving water supplies, the acid pollution has been reduced by more than half.

The drainage and treatment of mosquito-breeding swamps and improvement of drainage structures by WPA workers has been a strong

weapon in the fight against malaria. By the end of December 1939, drainage of about 2,900 square miles had been completed, and drainage structures on an additional 3,000 square miles had been reconditioned. WPA work in this field, according to public health officials, has greatly advanced malaria control in this country.

TABLE 36.—MEDICAL AND DENTAL SERVICES PROVIDED OR FACILITATED THROUGH PROJECTS OPERATED BY WPA<sup>A</sup>

| TWO-WEEK PERIOD IN JANUARY 1940                                                             |                   |
|---------------------------------------------------------------------------------------------|-------------------|
| Service                                                                                     | Number of Persons |
| Medical and dental examinations and treatments                                              | 242,700           |
| Tests made (Wassermann, Kahn, Schick, Mantoux, Dick, etc.)                                  | 82,500            |
| Immunizations completed (diphtheria, measles, scarlet fever, smallpox, typhoid fever, etc.) | 17,200            |

<sup>A</sup> Includes services by local agencies substantially assisted by WPA professional personnel.

Direct medical and health services for persons who could not otherwise afford them have been furnished by WPA white collar and professional workers, most of them unemployed physicians, registered nurses, dentists, and chemists. Usually these services are supplementary to those provided by local health agencies at medical and dental clinics, but often they are extended in regions where such services are otherwise not available. During a two-week period in January 1940, WPA doctors, dentists, and nurses assisted in the examination and treatment of about 243,000 children and adults. Some were treated in dental and medical clinics, others in their own homes or in public schools and other institutions. During the same period the WPA workers made about 83,000 tests (such as the Schick test for susceptibility to diphtheria) and administered 17,000 immunizations against diphtheria, typhoid fever, whooping cough, and other infectious diseases.

## Welfare

Welfare activities of state and local governmental agencies, other than health services, have also been extended through the cooperation of the WPA. On sewing room projects, operated in all states, WPA workers produce

for the use of needy persons a variety of garments; many types of household articles including sheets, pillowcases, towels, and other linens; and surgical dressings and first aid supplies. Through December 31, 1939, the project employees, most of whom are women, had completed almost 222,700,000 pieces of clothing and about 68,000,000 other articles. The accompanying map indicates the number of articles produced on WPA sewing projects in each state.

Projects on which lunches are served to undernourished school children result not only in better health but in better grades, better school attendance, and better attitudes on the part of the children. From the beginning of the program through December 1939, more than 384,000,000 lunches were served; on one day in January 1940, about 1,000,000 children received lunches prepared by project workers in nearly 11,200 participating schools.

Housekeeping aide projects provide non-nursing service in homes where the regular homemaker is incapacitated or where some other emergency exists. Up to the end of 1939, over

17 million visits had been made by housekeeping aides, who render the needed emergency assistance and also attempt to introduce into the home better methods and higher standards which will be of permanent value to the family.

TABLE 37. ACCOMPLISHMENTS ON SELECTED TYPES OF WELFARE PROJECTS OPERATED BY WPA

CUMULATIVE THROUGH DECEMBER 31, 1939

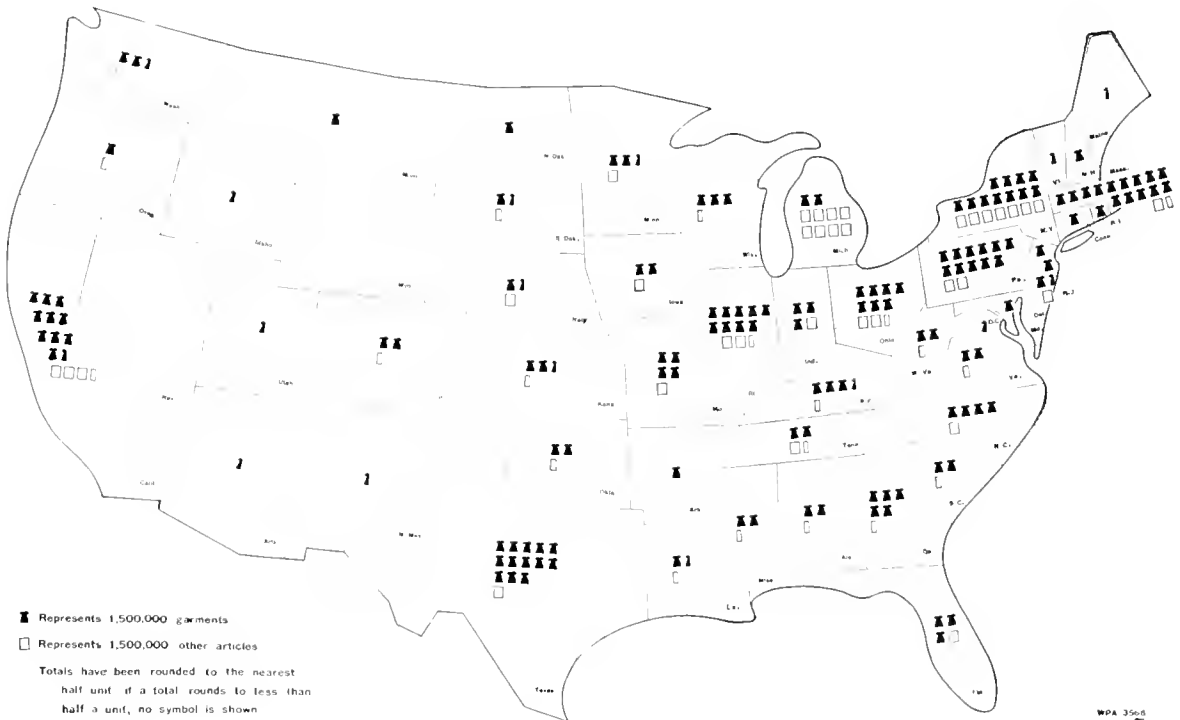

| Item                              | Number      |
|-----------------------------------|-------------|
| Visits made by housekeeping aides | 17,159,000  |
| Lunches served to school children | 384,213,000 |
| Articles produced in sewing rooms | 290,643,000 |
| Garments                          | 222,683,000 |
| Men's                             | 17,289,000  |
| Women's                           | 57,793,000  |
| Boys'                             | 41,288,000  |
| Girls'                            | 48,342,000  |
| Infants'                          | 27,961,000  |
| Other articles                    | 67,960,000  |
| Food preserved:                   |             |
| Quarts canned                     | 42,203,000  |
| Pounds dried                      | 1,839,000   |

Workers on canning projects preserve large quantities of food obtained from WPA gardening projects, the Federal Surplus Commodities

CHART 13

## ARTICLES MADE ON WPA SEWING ROOM PROJECTS

Cumulative Through December 31, 1939

WPA workers preparing lunches for undernourished school children

Corporation, or from project sponsors. During four and one-half years of WPA operations they canned over 42,000,000 quarts and dried 1,819,000 pounds of foodstuffs. On other production projects WPA workers make furniture, repair shoes, and construct and repair toys. Food canned and goods produced on WPA projects are distributed to public institutions and to needy persons designated by state and local welfare agencies. Some of the food is also used for the noonday lunches prepared for children on the school lunch projects. Similar disposition is made of the surplus commodities purchased by the Federal Surplus Commodities Corporation which, together with the goods and foods produced on WPA projects, are distributed through the use of WPA labor.

## Conservation and Flood Control

A group of WPA projects are directed towards flood control, the reduction of the loss of valuable topsoil through water and wind erosion, and the conservation of water, timber, game, and fish. The improvement of riverbank and shoreline tends to prevent erosion, as does also the work on streambeds, which involves clearing away snags and brush, straightening channels, and installing various checks upon the unimpeded flow of water. A similar purpose is served by construction or reconditioning of retaining walls and revetments along roads and streams and by extensive riprapping of critical slopes and surfaces. Numerous percolation, check, and diversion dams also have been built for soil erosion control.

For the purpose of holding unruly floodwaters in their courses many miles of new levees and embankments have been built. Other embankments with earth, cinder, and slag fills which did not effectively prevent seepage at highwater have been improved through the construction of concrete cores. The amount of such work completed by the end of 1939 is shown in Table 38.

Besides the land reclaimed by drainage work on other types of projects, WPA workers have improved or reclaimed over 3,000,000 acres (an area nearly as large as the state of Connecticut) by constructing nearly 800 miles and renovating 3,800 miles of irrigation canals, flumes, or pipes. Nearly all of this land is in the Far West; over half of it in California alone. Also in the western part of the country are many of the 436,000 acres of forest lands that have been planted and much of the large area of forest that has been protected against fire by the building of 4,700 miles of firebreaks and 4,000 miles of forest and fire trails.

Through other WPA project operations woods, lakes, and streams in all parts of the country have been stocked with game and fish. On the Atlantic and Gulf coasts from Chesapeake Bay around to the mouth of the Mississippi River, 5,800,000 bushels of oysters have been planted in depleted oyster beds. The stocking of lakes and streams with fish has been facilitated by the construction of 233 new fish hatcheries, including additions, some of which are in the form of rearing pools and ponds for broodstock, and by the reconstruction of 131 other hatcheries. Numerous sanctuaries have

A Includes additions to previously existing fish hatcheries.

been established for the protection of birds, especially waterfowl, and other animals. Furthermore noxious plants and insect pests have been eradicated from thousands of acres of land and millions of predatory animals have been killed.

Some of the work accomplished on projects of other types has a bearing on conservation. For example, the thousands of miles of drainage along roadsides, the drainage of wet weather ponds and marshes for mosquito control, the placing of culverts, the sealing of abandoned mine-openings, and the construction of storage dams all contribute, at least indirectly, towards conservation of natural resources.

## Other Buildings

The public buildings described in connection with WPA work in the fields of education, health, and recreation represent only about half the public buildings that have been erected or renovated by WPA workers. In addition to the 34,000 educational buildings, 11,000 recreational buildings, and 1,680 hospitals already mentioned, about 42,000 other buildings of various types had been completed by the end of 1939. Altogether, in the course of WPA project operations, more than 23,000 new buildings had been constructed, additions made to about 2,800, and about 63,000 others had been renovated and improved.

Among the 42,000 other buildings constructed or remodeled by WPA workers were over 4,600 office and administrative buildings housing state, city, county, and township and other government employees. About 3,200 were garages, another 3,600 were storage buildings, nearly 2,200 were fire houses, and 600 were armories.

Frequently the new or remodeled buildings make possible long contemplated economies in operation, as in the case of the new town hall at Sparta, New Jersey. Once an old country school, it now houses several governmental units that were previously located in widely scattered buildings—the fire and police departments, the township jail, and the library. Other facilities in this renovated building are an apartment for the building custodian, two

bowling alleys, an auditorium with stage and dressing rooms, a kitchen, and a heating plant. It is expected that this centralization will reduce maintenance costs, expand community services, and result in greater efficiency in township government. Similar examples are numerous among the thousands of buildings that have been constructed or modernized through WPA project operations.

Garages built to house highway equipment provide another example of the way in which WPA building construction has facilitated the normal work of local governmental bodies. Many counties have found that efficiency required the purchase of expensive highway equipment but considerations of economy frequently forced them to keep it in buildings that were not advantageously located, did not properly protect the machinery against weathering, or did not have space for repair work or for the storage of tools and materials. Some of the 1,700 new garages built on WPA projects replace such inadequate structures.

Of particular interest is the group of buildings erected for the Michigan State Diagnostic, Research, and Control Laboratory at Lansing, Michigan. They provide facilities for the

Latanka Dam built by WPA workers at Medicine Park, Oklahoma

At work on an infant mortality survey for Kentucky

preparation of serums, analysis of foods, feeds, and fertilizers, and testing of liquor, gasolines, and oil. Among the buildings of the group are stables for the horses used in the production of immunizing serums and structures to house other animals used for laboratory purposes.

Examples which might serve to illustrate the wide variety of other buildings constructed or improved through WPA activities in all parts of the country range from the municipal bus terminal in Hackensack, New Jersey, to the Juvenile Detention Home in Fulton County, Georgia. Also included are such other structures as weather stations, dormitories, teacherages, barracks, guardhouses, workshops, community centers, comfort stations, greenhouses, barns, and stables.

### Miscellaneous Types of Work

Many kinds of projects authorized for operation under the WPA, requested by sponsors to meet local needs, and worked on by unemployed persons from practically all occupational backgrounds have not yet been mentioned in this classified summary of activities. For some of them accurate measurement in physical terms is difficult and hence no accomplishment data are presented. For others the items of accom-

plishment that can be summarized give an inadequate representation of the value of the work done; this is particularly true of the arts program, the survey of historical records, and the research projects of many types.

Under the arts program WPA artists have made thousands of easel and mural paintings for schools, libraries, and other public buildings. Their work also included mosaics, sculptures, water colors, etchings, prints, photographs, and dioramas. Some of their work has been acclaimed by art critics and added to great art collections. Posters that they have prepared have been of particular value in health and safety campaigns. Through the employment of unemployed musicians on the music project, millions of persons have been able to enjoy the works of great composers; during a two-week period of January 1940, about 2,500 musical performances were given for an aggregate audience of 1,100,000 persons. Members of the writers' craft have produced works on a wide variety of American subjects. Notable among these is the American Guide Series, which has entailed an amount of research far beyond the scope of private organizations.

The survey of historical records project facilitates work in the field of historical research by arranging and cataloging records which hitherto had been inaccessible. On other research projects, sponsored by both Federal and local agencies, WPA workers have conducted housing, traffic, and engineering surveys; tabulated, analyzed, and charted weather data of value to aviation; and made studies relating to syphilis, tuberculosis, industrial diseases, public health, public welfare, family incomes, cost of living, employment and unemployment, public finance, and taxation. These projects not only have made much valuable information available to students, but also, in many instances, have aided the sponsoring agencies in solving their own administrative problems.

# OPERATING POLICIES AND PROCEDURES

THE operation of a nation-wide project program employing between a million and a half and three million workers, as the Work Projects Administration has done since it was established in 1935,<sup>1</sup> requires the formulation of definitive administrative policies, the development of detailed procedures and regulations, and the establishment of standard operating methods for effective functioning of the program. Criteria must be established for the selection of workers and methods devised for assigning them to project jobs, determining their rates of pay and hours of work, and facilitating their return to private employment. Similarly, the numerous details of eligibility, specifications, approval, and operation of the work on which employment is to be provided, must be reduced to procedures applicable to the thousands of projects operated in all sections of the country. The working rules governing employment and project operations are in the form of legislative regulations and administrative instructions from the Commissioner of Work Projects. Many of the administrative regulations developed by the WPA through experience in operating the program have been incorporated in the acts appropriating funds for the WPA. Basically, the administrative regulations have been designed to carry out the provisions of the acts and to promote efficiency in operations. They are summarized in the following pages with the

purpose of showing how the WPA program operates.<sup>2</sup>

The WPA program is operated through a system of state and regional offices. State administrations, functioning in each of the states and in Puerto Rico, Hawaii, and the District of Columbia, are headed by administrators who are responsible to the Commissioner of Work Projects for the efficient operation of the program in these areas.<sup>3</sup> Where necessary for operating purposes, the state administration functions, in turn, through two or more district offices which are directed by district managers responsible to the state administrator. Nine regional directors, who are official representatives of the Commissioner in the field, coordinate the work of the WPA in the states of their respective regions.

## Employment Regulations

Policies and regulations regarding the persons employed on work projects and the conditions of their employment have developed from both statutory provisions and administrative considerations. The various acts appropriating funds for the WPA have specified the general rules of eligibility for employment. Working procedures for determining whether or not applicants meet these eligibility requirements,

<sup>1</sup> The original name, Works Progress Administration, was changed to Work Projects Administration by Reorganization Plan No. 1, effective July 1, 1939, which made the WPA a unit of the Federal Works Agency but did not materially alter its original function.

<sup>2</sup> The WPA program includes projects operated by other Federal agencies with WPA funds; the rules and regulations discussed in this section generally apply to these projects as well as to those operated directly by the WPA.

<sup>3</sup> For administrative purposes, separate administrations have been established for Northern California and Southern California and for New York City and the remainder of New York State.

however, have been developed by the WPA in cooperation with local public welfare or relief agencies. Regulations concerning assignments to project jobs or other matters affecting the worker in his WPA employment have been established chiefly by administrative action but to some extent have been indicated by law. Wages of project workers are paid in accordance with a schedule of monthly earnings determined by the WPA in conformity with legislative requirements.

### Eligibility Requirements for Employment

In general, employment on WPA projects is provided for employable citizens in need of jobs, including men and women who have a wide variety of experience, skills, and occupational training. These workers must meet established eligibility requirements. The eligibility of unemployed workers for WPA jobs is determined primarily by their need of employment. To be eligible, the worker must also be at least 18 years of age and a citizen of the United States. Furthermore, he is not eligible for WPA employment if he is a Communist or member of a Nazi Bund or if he advocates, or is a member of an organization that advocates, the overthrow of the United States Government.

Only one member of a family is eligible for employment on the WPA program, even though there are several employable members in the family. Usually the WPA employee is the normal wage earner of the family; however, in some instances where the normal earner is unable to work the priority may be changed, permitting the employment of another member of the family.

### Referral and Certification

Need of employment has been a fundamental condition of eligibility since the inception of the WPA program. Workers meet this eligibility requirement if they are unemployed and if their incomes are insufficient to provide their families with a reasonable subsistence compatible with decency and health. In most instances the local department of public welfare or the local relief agency reviews the needs and resources of persons who apply for relief and is

responsible for determining eligibility for WPA employment so far as this basic condition is concerned.

Before referring applicants to the WPA for project jobs the welfare or relief agency investigates other conditions of eligibility. The agency will not refer persons who are under 18 years of age, who are considered to be unemployable, or who are aliens. If the worker is found eligible on the basis of these requirements and if he has registered with the local public employment office, his application is referred to the WPA. All workers are required to execute an affidavit as to their citizenship and loyalty to the United States.

Actual determination of employability—ability to perform work on a project in a satisfactory manner—is made by the WPA through its Division of Employment. A worker, whose employability has been determined and who meets the other eligibility requirements mentioned above, receives a notice of certification from the WPA and becomes available for assignment to a project. The worker's past employment history is then reviewed to ascertain the occupation for which he is best fitted by training, experience, and ability.

### Assignment

The number of persons certified as eligible for WPA employment generally is larger than the number of WPA jobs available. In placing workers on projects, preference within the group awaiting assignment and qualified to perform a given job is first given on the basis of relative need. Where the relative needs are found to be the same, preference is given to veterans<sup>4</sup> as required by provisions of the Emergency Relief Appropriations Acts. No discrimination is made among the persons awaiting assignment on the basis of age if the worker is able to perform project work satisfactorily. An individual will not be assigned if another member of the family is already employed on a WPA project; the family head, or the chief wage earner, is usually the member assigned to WPA employment.

<sup>4</sup> Beginning July 1, 1940, the wife of an unemployable veteran and a veteran's widow who has not subsequently remarried are given the same preference as a veteran.

A relatively small number of persons who have not been certified as in need may be assigned to project work. These exceptions from the basic certification requirement are made in order to permit the employment of key persons essential to the efficient operation of a project—such as certain types of skilled labor, experts, technicians, and supervisory personnel—who may not be available on the relief rolls. In general, such exempted personnel may not exceed 5 percent of the total number of persons employed on any WPA project. Under certain circumstances the Commissioner or his authorized representative may authorize exemptions from this regulation. On WPA projects operated by other Federal agencies, however, the number of noncertified persons may not exceed 10 percent.

In making assignments to project work the WPA endeavors to place the individuals on the kind of jobs for which they are best qualified. Proximity of the worker's residence to the project site is also considered and workers are assigned to projects nearest their homes so far as practicable.

The WPA has formulated certain regulations to facilitate the transfer of its workers into private industry. Persons employed on WPA projects must maintain active registration with public employment offices and must accept bona fide offers of private employment. If the worker loses such private employment through no fault of his own, the WPA will reassign him to project work provided he is still in need and has exhausted any unemployment compensation benefits which may have accrued during his period of employment. Similarly, workers employed on WPA projects are expected to accept offers of employment on projects of other Federal agencies when the earnings are comparable with those established for similar work on WPA projects. Directed towards the same general objective is the statutory provision that requires the separation of all workers (except veterans) who have been continuously employed on WPA projects for 18 months. Such workers are ineligible for WPA employment for a period of 30 days; at the end of that time, if they are still in need, they may be recertified as eligible for WPA employment. This provision was modified in the ERA Act for the fiscal year

1941 to exempt wives of unemployable veterans and veterans' widows who have not subsequently remarried.

A review of the need status of certified WPA workers at least once every six months has been required by law.<sup>5</sup> During the six months ending December 1939, 2.7 percent of the workers whose eligibility was reviewed were found to be ineligible, and their employment was therefore terminated. During the second half of the fiscal year a similar proportion of the certifications reviewed were canceled.

### Hours and Earnings

Monthly earnings of WPA workers were modified by provisions of the Emergency Relief Appropriation Act of 1939 which directed the Commissioner of Work Projects to fix a monthly earnings schedule which should not vary between geographical areas to any greater extent than could be justified by differences in cost of living and which would not "substantially affect the current national average labor cost per person." The schedule so established, given in Table 39, was placed in effect on September 1, 1939. The new schedule, like those established in earlier years, provides for variation in monthly earnings according to the degree of skill required for the job to which the worker is assigned, the geographical region, and the degree of urbanization of the county in which the worker is employed.

The country is divided into three wage regions. As shown in the accompanying map, Wage Region I includes the northeastern and north central part of the country; Region II, the western states; and Region III, the southeastern and south central sections of the country. The rates paid in Regions I and II differ only in the areas with relatively small populations; they are higher for workers in the less populated areas of the West than in areas of the same degree of urbanization in the northeastern and north central part of the country. Differences existing in the West between the cost of living in small towns and the cost of living in large cities are typically less than similar differences in other sections of the

<sup>5</sup> Effective July 1, 1940, this provision was modified to require redetermination of eligibility once in 12 months.

## CHART 14

**WPA WAGE RATE REGIONS \***

Effective September 1, 1939

\* The schedule of monthly earnings is shown in Table 39

WPA 3230

country. Rates in both Regions I and II are higher than those in Region III, where living costs are relatively low.

Within each wage region, counties are distributed among four urbanization groups based upon the 1930 population of the largest municipality in each county. The groups to which differentials in wages apply are those in which the largest city in the county had 100,000 or more inhabitants in 1930, between 25,000 and 100,000 inhabitants, between 5,000 and 25,000 inhabitants, or less than 5,000 inhabitants. In the case of 19 large metropolitan districts the wage schedule of the county with the largest municipality applies to the entire metropolitan area as defined in the 1930 Census.

In differentiating among types of work performed, five wage classes are established—unskilled “B,” unskilled “A,” intermediate, skilled, and professional and technical. Monthly earnings established by the schedule range

from \$31.20 to \$94.90. The lowest wages apply to employees doing work classified as unskilled “B” (work of a simple nature requiring little education or training and which does not involve hazards or heavy physical labor) in counties in Wage Region III in which the 1930 population of the largest town was less than 5,000. Highest rates apply to workers holding professional or technical jobs in counties of Regions I or II that contain a city having a population of 100,000 or more in 1930.

New regulations in regard to working hours of persons employed on WPA projects became effective July 1, 1939, in accordance with the Emergency Relief Appropriation Act of 1939. Under these provisions all project workers, except supervisory employees, are required to work 130 hours per month but not more than 8 hours in any day or 40 hours in any week. Prior to the introduction of the 130-hour regulation each certified employee worked as

many hours as were necessary to reach the monthly wage at which he was assigned, at the prevailing hourly rate of pay for the type of work performed. This procedure had caused considerable difficulty in scheduling project operations, necessitating several work shifts of various lengths on individual projects. The standard work month has made possible a considerable simplification of project working plans and has increased operating efficiency.

Exceptions to the limitations on hours of work and monthly earnings may be made by the Commissioner of Work Projects or his authorized representative where necessary to protect work already done on a project, to permit making up lost time, or to meet an emergency (such as flood or hurricane) involv-

ing the public welfare. Certified workers with no dependents may be required to work fewer hours and receive correspondingly smaller earnings. Hours and earnings on projects certified by the Secretary of War or the Secretary of the Navy as being important for military or naval purposes may likewise be exempted from the provisions at the discretion of the Commissioner of Work Projects.

Further exceptions up to a maximum of 5 percent of all project workers in any state are permitted in the case of technicians, certain types of skilled workers, and supervisory workers essential to project operations, when these are not available on lists of certified workers referred to the WPA. (Beginning July 1940 exemptions will be made where necessary on projects certified by the Secretary of War or Secretary of the Navy as being important for military or naval purposes.)

Wage Region III.—Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia.

<sup>A</sup> The schedule of monthly earnings applicable to counties in which the 1930 population of the largest municipality was 100,000 or more is applicable to the entire area included within the following metropolitan districts, as such districts are defined by the 15th Census of the United States, 1930: Baltimore; Boston; Buffalo-Niagara; Chicago; Cincinnati; Cleveland; Detroit; Kansas City, Kans.-Kansas City, Mo.; Los Angeles; Milwaukee; Minneapolis-St. Paul; New York City-Northeastern New Jersey; Philadelphia; Pittsburgh; Providence-Fall River-New Bedford; St. Louis; San Francisco-Oakland; Scranton-Wilkes-Barre; Washington, D. C.

## Project Procedures

In planning and prosecuting the work to which persons certified for WPA employment are assigned, definite procedures must be formulated and observed if constructive results are to be obtained. WPA procedures governing the proposal and operation of projects, like those relating to employment, have been determined both by law and by the requirements of efficient program operation. Acts appropriating funds for the WPA have specified the general types of projects that are eligible for operation and have placed specific limitations on the use of Federal funds in the operation of these projects. Such statutory provisions have been incorporated with administrative requirements in the formulation of regulations governing all the various steps of project initiation and operation.

## Eligibility Requirements for Projects

To be eligible for operation under the WPA program, projects must meet three general requirements: they must provide benefits needed by the community, without taking over functions which the sponsor could normally carry on without WPA assistance, or displacing persons already employed; they must be suitable

to the utilization of the occupational skills of the eligible unemployed workers in the area where they are to be prosecuted; and they must promote the public welfare rather than benefit any private institutions or individuals. These general provisions are assured in part by regulations as to who may sponsor projects and where they may be operated.

Projects may be sponsored only by public agencies. Towns, cities, counties, states, and other political subdivisions and legally constituted agencies thereof sponsor the majority of projects; a relatively small number are sponsored or cosponsored by agencies of the Federal Government. Until August 31, 1939, the WPA itself sponsored a few projects that were nationwide in scope, but such projects have been discontinued. In a few specific cases nonprofit quasi-public agencies legally controlled by public authority are allowed to sponsor WPA projects, if the agencies receive their principal support by regular budgetary appropriation from public revenue and if their assets, upon dissolution, revert to public ownership. In addition, the Emergency Relief Appropriation Act, fiscal year 1941, provides specifically for sponsorship of projects for electric transmission and distribution lines or systems to serve persons in rural areas by nonprofit and cooperative associations and for sponsorship of irrigation projects by community ditch organizations.

Projects must, in general, be operated on public property. In exceptional cases, which will result in large public benefit, projects involving improvements to private property may be operated, provided leases, easements, or other legal authority granted to a public agency are sufficient in duration to cover the normal expected life of the improvements to be accomplished by means of the Federal grant.

The scope of project activities that may be operated under the general eligibility requirements is extremely wide. Fields in which work may be prosecuted as specified by law include, among others, road work; construction of public buildings, recreational facilities, public utilities such as sewer systems and water supply systems, and airports; conservation activities; and professional and service projects. The construction work being prosecuted in accordance with this statutory authority involves both

improvement of existing facilities and new construction jobs. Nonconstruction activities cover educational, recreational, and other cultural and community service types of work, as well as a wide variety of public welfare and research activities.<sup>6</sup>

Certain restrictions, however, have been placed upon the kind of work that may be undertaken as a WPA project. For example, regulations have been established to prohibit the operation of projects that would compete with other public work or with private industry. No work or service may be undertaken which would result in the displacement of personnel regularly employed by the project sponsor or other public agency or which would prevent the employment of persons who otherwise would be employed by them. In the avoidance of competition with private industry the production of construction materials such as stone, gravel, and brick is not encouraged and is limited (with the exception of concrete pipe, which after July 31, 1940, will be subject to strict prohibition) to materials needed in the prosecution of a project when it is shown that necessary materials could not otherwise be obtained with available resources. By legislative provision projects for the improvement of penal and reformatory institutions are ineligible except when the President determines that they will not cause or promote competition of the products of convict labor with those of free labor. Also ineligible are projects for the development of factories or plants which contribute directly or indirectly to the production of goods for sale in competition with existing industries (statutory exceptions are made for products derived from the first processing of sweet potatoes and for naval stores products).

In addition to the regulations formulated to prevent competition with private industry, the operation of certain specific kinds of work is prohibited. WPA funds may not be used for the manufacture, purchase, or construction of naval vessels, munitions, or other implements of war. Also prohibited is the use of funds for the operation of theatre projects, although such projects were eligible for operation prior to June 30, 1939. Work camps may not be

<sup>6</sup> The nature of project work undertaken by the WPA is described in more detail on pp. 65 to 80.

established except as an incidental part of other projects where necessary because of difficulty of transportation or other special conditions.

Projects for the extension or improvement of streets and utilities in relatively undeveloped areas are ineligible except where the utility or improvement is not dependent on the area traversed or where there is assurance that the work will result in definite public benefit within a reasonable period, particularly in connection with low-cost housing developments such as the undertakings that are insured by the Federal Housing Administration.

With respect to the housing programs of the United States Housing Authority the WPA may not perform work on actual building construction but assists in such programs through the prosecution of projects for housing surveys, preparation of publicly owned sites, and construction or improvement of public facilities such as streets, sewers, water mains, and parks, when such projects are set up under eligible sponsorship.

A further requirement for project eligibility, specified in the ERA Act of 1939, concerned the size of buildings: no Federal project was eligible for approval after July 1, 1939, which involved the construction of a building on which the total estimated cost exceeded \$50,000 and no non-Federal building project on which the total estimated cost to the Federal Government exceeded \$52,000 was eligible unless the project was one for which a bond issue had been authorized at an election held on or prior to July 1, 1939. The ERA Act, fiscal year 1941, raised the limitation on the Federal cost of buildings projects to \$100,000 and exempted from this limitation projects for which bond issues had been authorized prior to May 16, 1940, and projects certified by the Secretary of War or the Secretary of the Navy as being important for national defense.

### **Sponsorship Procedures**

Properly qualified sponsoring agencies initiate formal consideration of work which they wish to have undertaken as WPA projects by submitting project proposals to the state or local WPA office. These proposals give detailed information as to the location and purpose of

the projects, a general description of the work, detailed construction and cost specifications, and other pertinent data.

Each sponsor, in initiating the proposal, is required to sign a certification with regard to the accuracy of the data supplied in the proposal and an agreement to the effect that the project will not be placed in operation until assurance is given that the sponsor's contributions will be made available as specified in the proposal and as required by project operations. Also included in the agreement is the assurance that, if the proposed work is undertaken, the sponsor will finance such part of the entire cost as is not to be supplied from Federal funds and that the proposed work will be done in conformance with all legal requirements and rules and regulations of the WPA and in accordance with the specifications given in the proposal.

Until the first of January 1940 the size of sponsors' contributions was not fixed by law, either in relative or absolute terms, but was largely controlled through the limitation of the amount of Federal funds allotted for non-labor costs—a limitation which was established at \$6 per worker per month under the 1939 ERA Act. In addition statutory provisions now require that at least 25 percent of the total cost of all non-Federal projects approved on and after January 1, 1940, for operation in any state must be supplied by the sponsor. (Under the ERA Act, fiscal year 1941, effective July 1, 1940, projects certified as important for defense may be exempted from these requirements.)

The sponsor's contribution, as defined by WPA regulations, may be made available in the form of cash, materials, supplies, and equipment rental; personal services at the project site or consulting, engineering, and other professional services; land or leases, easements, or other rights to land, necessary for project operations; or other items essential to the project. Credit is allowed, however, only to the extent that such contributions represent a financial burden undertaken by the sponsors specifically for the project.

### **Application and Approval Procedures**

If, in view of the requirements indicated above, the proposal is found to be acceptable

by the state or local WPA office to which it is submitted, an application form is prepared on the basis of the data given in the proposal and is submitted to the state administrator. For projects sponsored by Federal agencies, the application is prepared by the agency concerned and forwarded to the state administrator for approval. After careful review to see that the project conforms to the various rules and regulations of the WPA and after approval by the state administrator, the application, together with any supporting documents that may be necessary, is transmitted to the Federal WPA in Washington, D. C., and there referred for recommendation to the operating division (Engineering Division or Division of Professional and Service Projects) having jurisdiction over that type of work.

Applications for certain types of projects are also reviewed by various other governmental agencies performing related work or having an advisory interest in such work. This review enables the WPA to benefit from the technical experience of these agencies and insures that the project will conform to their general policies and not conflict with other proposed work. For instance, projects for the construction or improvement of Federal-aid highways must be approved by the Public Roads Administration, and projects providing for malaria-control drainage, land reclamation, or drainage of swamps and ponds for elimination of mosquitoes, must be reviewed and recommended by the Biological Survey of the Department of the Interior before they are approved by the WPA in Washington. Each application approved by the WPA must also be approved by the President before the project becomes available for operation. Federal projects are subject to approval by the Bureau of the Budget before final approval by the President.

From the reservoir of projects that have received Presidential approval the state administrator may at any time select those best suited for operation under the conditions then prevailing. Once a project is chosen for operation it may be operated in its entirety as approved or in parts that represent self-contained units of work included in the approved project. Chief considerations in selecting a

project are the need for the type of employment which the project would supply, the immediate availability of the kinds of labor required, and the usefulness of the project. Cost factors are also important considerations in project selection.

By means of the reserve of approved projects a high degree of flexibility is maintained in the program. The program thus can be expanded quickly when an increased number of jobs is needed for eligible unemployed workers, and its content can be modified with changes in the occupational distribution of workers available for assignment to project jobs.

### Operating Procedures

After a project has been selected by the state administrator for operation, a project engineer or supervisor is chosen by the local WPA and schedules of work and of material and equipment deliveries are arranged between the WPA operating division concerned and the sponsor. The operation of the projects that have been approved and selected is the responsibility of the WPA, with full consideration being given to the recommendations of the sponsor regarding the conduct of work. When all details of operation have been developed, the workers necessary for project operations are requisitioned from the Division of Employment by the division having supervision of the project. The supervisor of the project is responsible to the local representative of the WPA operating division for the efficient operation of the project. The sponsor is usually responsible for technical advice on the project work, but all matters relating to employment and to WPA finances are entirely within the jurisdiction of the Federal Government.

Particular attention is paid to the provision of safe working conditions on projects. Buildings are inspected for fire, accident, and health hazards. Mechanical equipment is required to meet safety requirements. Regular inspections during the period of operation insure the application of comprehensive safety regulations. Precaution is exercised in handling and storing inflammable and explosive material. Only experienced men are assigned to jobs involving

unusual hazards, and all workers are familiarized with precautionary measures if these are necessary. Special safety devices such as goggles and helmets are provided where the type of work makes this advisable. When accidents do occur, compensation is provided for WPA workers through the United States Employees' Compensation Commission, to which funds have been made available for this purpose under each of the ERA Acts.

In addition to the regulations governing the initiation and prosecution of projects, an accounting system has been developed to control the expenditure of funds required for the program. These financial controls are maintained by the WPA Division of Finance and the Treasury Department. They cover sponsors' as well as WPA funds, both labor and nonlabor items, and involve constant control of all transactions on individual projects.

# FEDERAL WORK PROGRAMS AND PUBLIC ASSISTANCE

**J**obs for the unemployed and assistance for various groups of persons who are unable to work are currently being provided through several public programs. Public assistance is also given to certain farm families whose need is not directly attributable to unemployment or to unemployability but to the fact that the returns from their farming operations are not adequate to meet their basic subsistence requirements.

## Federal Work Programs

The unemployed group contains many young persons whose lack of training and work experience seriously handicaps them in their efforts to obtain employment. Through the special youth programs of two agencies included in the Federal Security Agency—the Civilian Conservation Corps and the National Youth Administration—the Federal Government enables young men and young women to extend their training and to develop skills needed by private enterprise. Jobs for adult workers are provided on projects of other Federal agencies. The principal employment-providing program of the Federal Government is operated by the Work Projects Administration, which is included in the Federal Works Agency. WPA projects supply many kinds of construction and non-construction work for unemployed men and women having practically all types of skills and occupational backgrounds. In addition, a con-

siderable number of workers, particularly those experienced in the construction industry, are employed on public works projects financed by other constituent administrations of the Federal Works Agency and by other agencies and departments of the Federal Government that participate in construction work.

## Work Projects Administration

The primary objective of the WPA program is to employ unemployed workers on public work projects. Since 1935, the year in which it was established, the WPA has furnished more employment each month than have all other Federal work and construction programs combined. An average of approximately 1,735,000 persons were employed on WPA projects during June 1940 (Table 40). An outstanding characteristic of the program is its flexibility which has enabled it to be expanded or contracted rapidly with changes in unemployment and economic conditions. In other sections of this report the kinds of work undertaken by the WPA, the statutory provisions governing its operation, the accomplishments on project activities, the amounts of funds expended, and other aspects of the program are discussed in some detail. In order to facilitate comparisons with other Federal work programs, however, certain facts concerning the workers employed on the program are summarized below.

Only one member of a family group may be

employed on the WPA program. Although men and women of all ages from 18 upward may be certified for WPA employment, the program employs relatively few persons under 20 years of age or over 65 because other programs have been established by the Federal Government for young people and for the aged. The size of families of WPA workers is slightly larger on the average than that of families assisted through most other programs. The widely varied occupational and educational characteristics of WPA workers are important in determining the kind of projects selected for operation in a given community. WPA workers receive standard monthly wages, that vary in accordance with the skill required for the job to which the worker is assigned. The established wage schedule also varies between geographical areas, geographical differences being limited to differentials in living costs.

### **Civilian Conservation Corps**

The Civilian Conservation Corps, organized in April 1933, furnishes employment and vocational training to young men who are unemployed and in need of employment. Nearly nine-tenths of the CCC enrollees are "Juniors" who are selected from among unmarried men between the ages of 17 and 23, inclusive, that are not in regular attendance at school. They allot to their dependents about three-quarters of their basic cash allowances of \$30 a month. Enrollees are employed on public projects for the conservation and development of natural resources. They receive maintenance in camps where they may participate in education and training programs that supplement the experience obtained through project work. In June 1940 Congress authorized the CCC to offer special training in noncombatant subjects essential to the operations of military and naval establishments. Such subjects include cooking, first aid, operation and maintenance of motor vehicles, road and bridge construction and maintenance, photography, radio, and signal communications. The CCC is authorized to maintain in the continental United States a maximum enrolled strength of 300,000 men, of whom not more than 30,000 may be war vet-

erans; in addition, provision is made for the enrollment of not more than 10,000 Indians and a maximum of 5,000 men in the territories and possessions. Actual enrollment in the CCC usually has approached the authorized maximum except when discharges and replacements are being made at the end of enrollment periods.

### **National Youth Administration**

The NYA provides part-time employment for young women as well as young men on its student and out-of-school work programs. High school and college students who otherwise would be unable to remain in school receive monthly earnings for work performed under the NYA student work program. Approximately 350,000 high school and nearly 130,000 college and graduate students received such earnings in May 1940. All work is done under the direction of local school authorities, who establish the hourly rates of pay. Students are permitted to work a sufficient number of hours each month to earn specified maximum allowances. High school students may receive a maximum of \$6; college students may earn \$20 and graduate students (since September 1939) as much as \$30 per month. The student work program began in the autumn of 1935. In the two preceding school years the Federal Emergency Relief Administration had furnished similar assistance to college and graduate students but made no provision for students of lower grades.

Thousands of needy youths who are not attending school receive part-time employment on the out-of-school work program of the NYA. Nearly all of them are between 18 and 24 years of age. Payments were made to approximately 270,000 persons for work performed on this program during June 1940. The project work is supplemented by a program of related training, which consists of specially developed class work on such subjects as blueprint reading, shop arithmetic, and citizenship. Emphasis is now being given to the development of fundamental skills required for automotive and aircraft mechanics, metal and mechanical shop work, and for other occupations that are of

importance for the national defense. Whenever possible, instruction is supplied by vocational schools and the local public school systems. In areas where educational institutions do not have adequate facilities for this work, courses are conducted by NYA supervisors or by personnel from other public agencies.

### **Public Works Administration and Other Federal Agencies**

Construction projects of various units of the Federal Government other than the WPA, NYA, and CCC have provided employment for large numbers of experienced workers most of whom are not certified as being in need of relief. Nearly all of this construction work is handled on a contract basis. It has been financed both from regular appropriations and from funds made available by emergency appropriation acts. Major programs of public works are conducted by the Public Works Administration, the Public Roads Administration, the Public Buildings Administration, and the United States Housing Authority, all of which have been component parts of the Federal Works Agency since July 1, 1939. Construction work also is done by other Federal departments and agencies chiefly to improve and extend their own physical facilities.

The nation-wide program of PWA projects furnished employment to approximately 80,000 workers in June 1940. Seventy thousand of them were engaged on projects operated by state and local governments for which the PWA has made grants of up to 45 percent of total costs, often lending to sponsoring bodies some or all of the remainder. In the period since it was established in 1933, the PWA has also financed a large number of construction projects that are planned and supervised by other Federal departments and agencies, including the War and Navy Departments, the Public Roads Administration, the Bureau of Reclamation, and the Coast Guard.

Nearly 320,000 additional workers were employed on a wide variety of Federal construction projects in June 1940. Approximately 92,000 of them were engaged on Federal-aid highway work under the supervision of the Public

Roads Administration. The War Department employed about 35,000; the Navy Department, almost 80,000; and the United States Housing Authority, over 41,000 persons.

### **Public Assistance Programs**

Public assistance programs serve chiefly those destitute persons who are unable to work on public projects. Dependent children, aged persons, and blind persons are aided through the three special assistance programs that are financed in part by the Social Security Board of the Federal Security Agency. The Federal Government also provides aid for certain low-income farm families by meeting the costs of a program of subsistence grants administered by the Farm Security Administration of the Department of Agriculture. State and local governments are entirely responsible for extending general relief to families and single persons who are in need but for various reasons cannot be aided through the employment or assistance programs in which the Federal Government participates.

Many needy families also receive agricultural commodities that are purchased by the Federal Surplus Commodities Corporation of the Department of Agriculture in order to remove surpluses of farm products. Most of the families to whom the commodities are distributed are primarily dependent on general relief or some other form of assistance, although in certain areas where general relief funds are inadequate some families receive no other type of aid. Surplus commodities are given in addition to, and not as a part of, earnings or assistance payments made under other programs. In an increasing number of areas, surplus commodities are distributed by means of a food stamp plan. Recipients of WPA earnings, general relief, and other forms of public assistance are given blue stamps which may be used at regular grocery stores to purchase any food currently designated by the Secretary of Agriculture as a surplus commodity. In order to receive the free blue stamps, recipients are required to purchase orange colored stamps in amounts approximately equivalent to their normal food expenditures. The orange stamps may be used for all types of food. The plan, which was intro-

duced experimentally in a few cities early in 1939, was gradually extended to new areas in 1940. A similar program for the distribution of surplus cotton goods was undertaken experimentally in April 1940.

### **Special Types of Public Assistance**

Under the Social Security Act the Federal Government participates in three special types of public assistance—aid to dependent children, aid to the blind, and old-age assistance. Since February 1936, Federal grants-in-aid have been made to states in which programs meet the requirements of the act. Federal contributions are based on the amounts contributed by the states for the assistance of needy individuals who are 65 years of age or older and are not inmates of public institutions; for needy children under the age of 16, or under the age of 18 if regularly attending school, who have been deprived of the support of one or both parents and who are living in the home of a relative; and for needy blind individuals who are not inmates of a public institution. Up to specified limits for each type of recipient, the Federal Government currently pays for one-half of the assistance given to each individual and for part of the costs of administration. In June 1940, payments were made to 1,970,000 recipients of old-age assistance, 72,000 recipients of aid to the blind, and 346,000 families on behalf of 831,000 dependent children.

### **Farm Security Administration Grants**

The Farm Security Administration makes subsistence grants to destitute and low-income farmers, farm tenants, and sharecroppers to supply them with food, medical care, clothing, and other items needed for family subsistence. Approximately 60,000 grants were made by the FSA in June 1940. In the past, chief emphasis has been given to cases of extreme distress in farm areas devastated by drought, flood, storms, and similar catastrophes. Now, an increasing proportion of the grants are being given to families that are potential recipients of FSA loans. The FSA makes loans to low-income farm families who are unable to obtain adequate credit from any other source, for the

purchase of farm supplies, equipment, livestock, and land.

### **General Relief**

A residual group of persons who for various reasons are not reached by programs in which the Federal Government participates receive general relief from local and state governments. The group includes physically handicapped and other unemployable persons who do not meet eligibility requirements for any of the special types of public assistance and also certain employable persons who cannot be assisted through the work programs because of limitations in their occupational backgrounds, shortage of available funds, or other factors. In some areas, general relief is also given to families who receive aid under other programs if the family income including such aid is considered insufficient to meet their minimum requirements.

The actual administration of general relief is characterized by lack of uniformity. Practices with respect to eligibility requirements and standards of care differ widely from community to community. In areas where general relief standards are highest, all of the types of cases mentioned above are aided. In a large number of communities, however, general relief is rarely given to any family that contains a member considered to be employable, and relief allowances in these communities fall far short of adequate subsistence requirements.

Nearly all of the general relief given by state and local governments after the discontinuation of Federal Emergency Relief Administration grants has been in the form of direct relief. During the past year, however, a number of the communities that assist families with employable members have developed some form of work relief for part of their general relief cases. Work relief administered by local agencies is usually limited to activities that do not require the variety of skills used on WPA projects, and the amounts paid to the workers are generally much lower than WPA wage rates for unskilled workers.

In the country as a whole, 1,373,000 families and single persons received general relief in June 1940. The average general relief case

has about three persons as compared to an average of nearly four (3.76) persons in families of certified WPA workers. Funds appropriated for general relief by state and local governments frequently are inadequate, and this factor, rather than actual need, often determines the volume of general relief payments.

### Unduplicated Numbers of Households and Persons

The total number of recipients of all Federal work and public assistance programs cannot be obtained by simple addition. Payments made under some of the programs are intended to meet the needs of a family group; those made under others, such as the student work program, are intended only for certain individuals. Some family groups, moreover, benefit from more than one type of aid during a single month. One member may be enrolled in the CCC and the remainder of the family may receive general relief. Statistical duplication in monthly totals also may arise when a family receives one form of assistance in the first part of a month and is transferred to another in the latter part of

the month, and is therefore included in the recipient count for two programs during the same month.

No Federal agency collects complete statistics on the unduplicated number of recipients aided by all programs. The Work Projects Administration and the Social Security Board have, however, prepared monthly estimates of the unduplicated numbers of *households* and the unduplicated numbers of *persons* in the households benefiting from Federal work programs and the various forms of public assistance. The coverage of these series and of the comparable series on payments to recipients is described in the technical notes beginning on page 104.

### Changes in the Fiscal Year 1940

A total of about 5,700,000 households containing approximately 16,100,000 persons were benefiting from the various programs at the end of the fiscal year 1940. The number of persons was equivalent to 12 percent of the total population in 1940 reported in preliminary releases of the Bureau of the Census. These were the lowest June figures since 1937, as may be seen

<sup>A</sup> See notes on pp. 104 to 109 for source and description of data included; percentages computed from unrounded figures.

<sup>B</sup> Number of persons benefited from special types of public assistance estimated by the Division of Public Assistance Research, Social Security Board; number for other individual programs estimated by WPA.

<sup>C</sup> A relatively small number receiving only hospitalization or burial are included in figures for 1940 but not for 1939.

from Table 41 or Chart 15. The fiscal year ending June 30, 1940, was one in which a substantial decline occurred in the estimated net number of recipients of Federal work program earnings and public assistance. Starting from a lower level than that which marked the beginning of the previous fiscal year, the number of households was 14 percent smaller in June 1940 than in June 1939. The net reduction in the total number of persons amounted to 18 percent.

Because the WPA operates the largest single program of public work for the unemployed and because it is the most flexible of the Federal work programs, changes in the volume of WPA employment determine to a very large extent the trend in the aggregate numbers benefiting from all programs. The sharp drop in the totals between June 1939 and June 1940 was attributable chiefly to a heavy decline in WPA employment.<sup>1</sup>

Month-to-month changes in employment on other Federal work programs during the fiscal year 1940 for the most part followed patterns established in previous years. NYA employment increased as the school year progressed; CCC enrollment showed little change other than the temporary declines that occur every three months at the end of enrollment periods; and employment on regular Federal construction projects followed the usual seasonal pattern associated with the effect of weather conditions on outdoor employment. Increased appropriations for the fiscal year 1940, however, permitted a substantial expansion of the NYA programs, and by the spring of 1940 the number of youths employed exceeded previous all-time highs. Nearly 340,000 youths were employed on the out-of-school work program in February and 480,000 students were employed on the student work program in April. Employment on regular Federal construction projects ranged from 200,000 to 315,000 workers

between June 1939 and June 1940, and fluctuated at a higher level than in any previous fiscal year. Noteworthy among the increases were those in the number of persons employed on projects of the Navy Department, the United States Housing Authority, and the United States Maritime Commission. Employment on PWA projects and other Federal work and construction projects financed from emergency appropriations dropped steadily as no new appropriations for the fiscal year 1940 were made for these activities.

Throughout the fiscal year the three special assistance programs in which the Social Security Board participates continued to register moderate growth. One state was added to the number operating programs for aid to the blind under plans approved by the Social Security Board, bringing the total to 41 states and the District of Columbia. As in the previous fiscal year, the Federal Government participated in the old-age assistance programs of all 48 states and the District of Columbia, and in the aid-to-dependent-children programs of 40 states and the District of Columbia. In January 1940 coverage of the old-age assistance program was broadened in three states in compliance with a provision of the original Social Security Act. The act specifies that after January 1, 1940, no state imposing a minimum-age requirement of more than 65 years will be eligible for Federal old-age assistance grants; until that

CHART 15

FROM EMPLOYMENT ON FEDERAL WORK AND  
CONSTRUCTION PROJECTS AND PUBLIC RELIEF

<sup>1</sup> See pp. 1 and 2 for a more complete analysis of changes in WPA employment during the fiscal year.

date it permitted states to require a minimum age of as much as 70 years. The act, however, authorizes the Federal Government to share the cost of assistance given to individuals between the ages of 65 and 70 as well as those over 70; hence all but three states had adopted the 65-

year limit long in advance of the date required by the statute.

Also effective January 1 were liberalizations of Federal participation in the three special types of assistance made in accordance with amendments to the Social Security Act ap-

<sup>A</sup> See notes on pp. 104 to 109 for description of data included.

<sup>B</sup> Less than 500 persons.

proved in August 1939.<sup>2</sup> From July 1939 to June 1940 the number of old-age assistance

Effective January 1, 1940, the maximum monthly payment for old-age assistance or aid to the blind towards which the Federal Government contributes one-half was increased from \$30 to \$40, and the ratio of Federal participation in payments for aid to dependent children under 16 years of age was increased from one-third to one-half of the maximum amount

recipients rose from nearly 1,860,000 to about 1,970,000; the number of families receiving aid

of \$18 a month for the first child and \$12 a month for each additional child added in the same home. Federal reimbursement provisions were also extended to cover needy children 16 and 17 years of age who are regularly attending school.

<sup>a</sup> See notes on pp. 101 to 109 for description of data included.

<sup>b</sup> Less than 500 persons.

to dependent children increased from approximately 310,000 to almost 350,000; and recipients of aid to the blind increased by about 3,000 to nearly 72,000.

During the fiscal year 1940, general relief fluctuated at a somewhat lower level than in the preceding year.<sup>3</sup> The downward trend in

the national total was attributable in part to general improvement in economic conditions, but shortages of funds and expansion of the Social Security programs were responsible to some extent for declines in certain areas. Changes in private employment have little effect on general relief in states where it is virtually restricted to cases having no employable member. This is not true of the larger industrial states in which a high percentage of

<sup>A</sup> See notes on pp. 104 to 109 for description of data included.

<sup>B</sup> Less than 500 persons.

the total number of cases is concentrated. The national general relief totals were therefore influenced materially by changes in the volume of private employment and public employment, principally that provided on WPA projects, and to some extent by benefits paid under the unemployment compensation program.

From the comparatively low level of 1,540,000 in July 1939, the number of general relief cases rose to more than 1,670,000 in September and

then fell almost to 1,560,000 in December, the lowest December figure since 1936. The unusual trend during these months reflected to a marked degree an especially large volume of turnover between the general relief and the WPA programs. Many of the workers terminated from WPA employment in July and August because they had completed the legal maximum of 18 months' continuous employment were added to the general relief rolls.

Conversely, large numbers of WPA replacements were later made from the relief rolls. The large increase between December and January was attributable in part to the suspension of certain WPA project operations in many areas because of unusually severe weather conditions. During the first quarter of 1940 the number of general relief cases ranged between 1,630,000 and 1,690,000, but by April the total had dropped below 1,550,000. Decreased seasonal needs and increased employment opportunities contributed to the reduction in the number of cases during the last quarter of the fiscal year to 1,373,000 in June, the lowest point since 1937. There is reason to believe that declines would have been greater if WPA project employment had not been curtailed simultaneously.

The number of Farm Security Administration grants, ranging between 40,000 and 120,000, was also smaller, on the average, than it had been during the preceding fiscal year. Pronounced fluctuations characterized the figures for the states in which the FSA expanded its grant program temporarily to meet emergencies created by droughts, floods, and unusually cold weather in southern states. Outstanding were increases in the numbers of grants made in the drought and flood areas of southeastern states in the fall of 1939 and the following winter. In February 1940, this form of assistance was expanded in Florida and other southern states where freezing weather caused widespread crop destruction.

### Changes in the Period 1933-40

Fluctuations in the unduplicated numbers of households and persons benefiting from Federal work programs and public relief have been influenced primarily by seasonal variations in relief needs and by changes in the volume of unemployment and in general economic conditions. Changes in the adequacy and coverage of individual relief and employment programs and, to some extent, in the adequacy of funds supplied for these programs are also influences that should be taken into consideration in interpreting fluctuations in the aggregate numbers of recipients. At times, these factors have been temporarily overshadowed by emergency needs

arising from hurricanes, floods, and widespread drought.

Both the number of households and the number of persons benefiting rose during the first quarter of 1933. From the total of 5,650,000 households and 22,000,000 persons reached in April, the number assisted declined steadily during the next five months. A parallel movement occurred in the volume of unemployment as Federal recovery measures got under way.

Figures for the winter of 1933-34 reflect seasonal increases in need and the rapid growth of the Civil Works program initiated in November 1933, which recruited approximately one-half of its employees from relief rolls and the remainder from the large group of unemployed persons who had not been receiving relief. In January 1934, when Civil Works employment was at its maximum, the numbers of households and persons benefiting from all programs rose to the highest points recorded during the seven and one-half year period. About 8,000,000 households containing over 28,000,000 persons, a number equivalent to more than a fifth of the national population, received assistance in that month. The curtailment of the Civil Works program in the first quarter of 1934 marked the beginning of a gradual downward trend in the unduplicated numbers of recipients which continued until the autumn of 1937. The usual seasonal pattern was distorted in the summers of 1934 and 1936 by the necessity of aiding thousands of distressed families in areas that were devastated by severe drought conditions.

Relief needs were met much more adequately in 1934 and 1935 than in 1933. One of the primary objectives of the Federal Emergency Relief Administration, which financed most of the assistance given between the date of its establishment in May 1933 and the latter part of 1935, was to raise relief standards, particularly in those areas where they had been lowest. Standards were again raised when new programs were introduced in 1935 to replace the system of FERA grants to the states.

The declines in the aggregate numbers of recipients, which became especially pronounced in the summer of 1937, were interrupted by the sharp contraction in business activity that took place in the latter part of that year. The numbers of households and persons were greatly

expanded to meet the increased needs resulting from the steep rise in the volume of unemployment. The number of recipients, however, did not increase as rapidly as did unemployment, a lag which may be attributed in part to the fact that many workers, before becoming unemployed, had accumulated sufficient resources to finance several weeks or months of unemployment and in part to the limitations of funds available for the several programs. After reaching a high point in 1938 the trend in recipients was generally downward until the fall of 1939, following improvement in economic conditions. Since September 1939, the trend has followed the winter increase in unemployment and the subsequent improvement during the spring.

### Indexes of Unemployment and Persons Benefited

In Chart 16 changes in the total number of persons benefited by the Federal work and public assistance programs are compared with changes in the volume of unemployment estimated by the National Industrial Conference Board. The chart suggests that unemployment has generally predominated among the factors that have determined the unduplicated numbers of persons benefited by the several programs, although part of the recipients are not directly affected by unemployment, and other factors, noted above, have been of importance in certain periods. Clearly evident are the different levels of the two series during the first nine months of 1933, the rapid rise in recipients with the development of the Civil Works program, and the relatively high degree of conformity in general movement in the period following the curtailment of this program in 1934—a period in which the needs of the unemployed were met more adequately than they were in 1933.

The curves indicate that winter peaks in unemployment, as well as in needs for fuel and

clothing, contribute to the high degree of seasonality in the relief series. The effects of the extra drought relief employment provided by the WPA in the last half of 1936 and the delayed expansion in relief activities following the rise in unemployment that began in the autumn of 1937 are also apparent. When large groups of workers become unemployed, as they did in the winter of 1937-38, only a part of them are forced to apply for assistance immediately. Many are able to finance short periods of unemployment from previously accumulated savings or resources, assistance given by friends and relatives, or, in recent years,

<sup>A</sup> Based on estimates shown in Table 11.

from unemployment compensation benefits. It is not until such resources are exhausted during continued periods of unemployment that it becomes necessary for many persons to apply for relief. As a result of these factors there is

a tendency for rises in unemployment to anticipate increases in relief needs by several weeks or months. Because of this relationship and the expansion of the WPA program in southern states to aid sharecroppers who were in extreme distress because of the collapse of cotton prices, the rise in the total number of persons benefiting from relief and employment programs continued throughout most of 1938.

### Number of Persons Benefited

During the seven and one-half year period beginning with January 1933, there has been a gradual decline in the average number of persons per household receiving Federal work program earnings and public assistance. Part of the change is attributable to the tendency for two-family relief cases to separate during the FERA period; part of it has resulted from an increase in the relative number of small house-

CHART 17

## PERSONS BENEFITING FROM EMPLOYMENT ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PUBLIC RELIEF, BY PROGRAM

holds included in the totals. This tendency has been particularly marked in the period beginning with 1936, when increasingly large numbers of one- and two-person families have been aided under the old-age assistance program.

Wide differences exist in the average number of persons per household benefiting under the various programs included in the unduplicated totals. Changes in the numbers aided are therefore more significant when measured in terms of persons than in terms of households. The program composition of the unduplicated numbers of persons benefiting from employment on Federal work programs and public assistance is shown in Chart 17. In preparing this chart, persons who benefited under more than one program during the month were included only in that program which occupies the lower position in the chart. Because of this arbitrary allocation of duplication, the chart does not indicate precisely the relative numbers benefiting under the various programs. It does, however, indicate the relationship between the number of persons, including dependents, who have benefited from WPA employment and the total number aided by all programs combined.

## Payments to Recipients

Total payments made to recipients of Federal work program employment and of public relief totaled \$3,263,600,000 during the year ending June 1940, as may be seen from Table 44. Earnings on Federal work and construction projects accounted for \$2,188,200,000, or 67 percent of the total, and \$1,075,400,000, or 33 percent, represented payments for public assistance. WPA earnings accounted for nearly 41 percent of the total.

Aggregate payments for each month of the period were substantially lower than those for corresponding months of the preceding fiscal year. Payments for June 1940 amounted to \$256,400,000, a decrease of 16 percent from the figure for June 1939. Most of the decline occurred in earnings of persons employed on WPA projects, which dropped from \$141,000,000 to \$101,000,000, or 28 percent, although a much larger relative decrease (64 percent) occurred in the PWA program, which was

greatly curtailed during the year. The amount of general relief extended fell from \$37,100,000 to \$32,400,000. These declines were offset to some extent by increases in other programs. Earnings on regular Federal construction projects rose from \$27,400,000 to \$36,000,000, and payments for the two NYA programs expanded from \$5,900,000 to \$7,800,000. Total payments for the three special types of public assistance in which the Social Security Board participates—old-age assistance, aid to dependent children, and aid to the blind—continued their gradual expansion, increasing from \$47,100,000 to \$52,400,000.

Changes in the total amounts paid to recipients of the various programs are determined primarily by changes in the total numbers of such recipients, which were discussed in the preceding sections of this statement. Total payments have also been greatly influenced by the amounts paid to individual recipients under the several programs, by changes in the relative importance of these programs, and to some extent by technical factors.

Since 1933, aggregate payments have increased relative to the unduplicated number of households aided. In the first three years of the period, general relief issued on a budgetary deficiency basis was the principal form of assistance. Average general relief benefits increased substantially during this period when the FERA program was in operation and definite attempts were being made to improve relief standards. With the introduction of specialized employment and relief programs after the end of fiscal year 1935, payments made under the general relief program declined. The security wages paid on WPA projects were more adequate than average general relief benefits. The expansion of the PWA and other Federal construction work, most of which is done through private contractors at prevailing wages, also tended to increase average payments for all programs combined.

Aggregate payments have frequently registered somewhat sharper month-to-month fluctuations than have the unduplicated numbers of recipients. A part of this variation arises from payroll and accounting procedures which result in some lag between employment and payroll

reports and the inclusion of more payrolls in reports for some months than in others.

Payments made to recipients of the various programs in June 1940 are shown by states in appendix Table XX. The state figures reflect local differences in costs of living, incidence of

unemployment, and, for certain programs, differences in the adequacy of state and local funds.

### Notes on Coverage and Sources of Data

The estimated unduplicated total numbers of households and persons, discussed in the preceding pages and

Corps; the National Youth Administration; the Public Works Administration; and all other work and construction projects financed in whole or in part from Federal funds. The estimates do not cover recipients of institutional care or of Federal surplus commodities, or persons employed on regular construction activities of state and local governments that are carried on without Federal grants-in-aid. The scope of the compilation has not been extended to include recipients of rural rehabilitation loans made by the Farm Security Admin-

istration, recipients of unemployment compensation and old-age retirement and survivors' benefit payments made through the insurance programs of the Social Security Board, or similar payments made under the program of the Railroad Retirement Board.

The monthly figures on aggregate payments made to these recipients, which are presented in Table 44 and appendix Table XX, were obtained by adding the amounts reported or estimated for the various programs. In order to arrive at the total numbers of house-

A See notes on pp. 104 to 109 for description of data included.

B Less than \$500.

holds and persons, however, it was necessary to make several types of adjustment. Basic recipient data reported for the majority of programs correspond fairly closely to the number of households (families and single persons), but, for certain programs, reported recipient data were converted to a household basis. The number of *persons* benefited, including dependents of family heads, was reported monthly for only a few programs; data for other programs were estimated from information available from special reports and sample studies.

Allowances were made for duplication because some households and persons benefit from more than one program in the course of any given month. Duplication between programs is sometimes technical in nature, a result of the fact that assistance or work may be provided during part of a month under one program and during the remainder of the same month under another program; this type of duplication has attained important proportions at certain times, as, for example, in the fall of 1935.

TABLE 41. —AMOUNT OF EARNINGS OF PERSONS EMPLOYED ON FEDERAL WORK AND CONSTRUCTION PROJECTS AND PAYMENTS FOR PUBLIC RELIEF, BY PROGRAM<sup>a</sup>—Continued

CONTINENTAL UNITED STATES

MONTHLY, JANUARY 1933-JUNE 1940

[In thousands of dollars]

| 39,059                             | 10,899                    | 1,793            | 35,379         |           |                                                          |                     | 2,144                               | April,         |
| 39,603                             | 10,990                    | 1,814            | 32,391         |           |                                                          |                     | 1,516                               | May,           |

Unduplicated totals of households and of persons are presented only on a nation-wide basis. The allowances for duplication in nearly all instances were based on sample information which was believed to be adequate only for making adjustments in totals for the country as a whole. Such information is not suited for use in adjusting individual state figures because of the existence of wide variation in the extent of duplication among the different states. Unduplicated state totals consequently have not been developed. Recipient data for individual programs, however, are shown by states, for June 1940 in appendix Table XIX.

The unduplicated estimates were prepared jointly by the Social Security Board and the WPA. Duplication within the three special types of public assistance (old-age assistance, aid to the blind, and aid to dependent children) and between these programs and general relief for months subsequent to June 1936 was estimated by the Division of Public Assistance Research, Social Security Board. All other adjustments for duplication were prepared in accordance with methods developed by the Division of Research and the Division of Statistics of the WPA.

The coverage of the basic statistics on the numbers of recipients and amount of payments to recipients for each of the Federal employment and public relief programs, which are shown in text Tables 40, 41, and 44 and in appendix Tables XIX and XX, is reviewed in the detailed notes that follow. All figures relate to the continental United States or its political subdivisions and, unless otherwise specified, refer to the calendar month. The source of basic statistics, unless otherwise specified, is the WPA.

### Work Projects Administration

*Employees:* Data represent averages of weekly counts made during the month on all WPA projects.

*Amounts:* Data represent total earnings as shown on payrolls ending within the month for all persons employed on WPA projects.

### National Youth Administration

*Employees:* Data represent the number of different students employed under the student work program and the number of different persons employed on the out-of-school work program during the month.

*Amounts:* Data represent total earnings shown on payrolls ending within the month for persons employed under the NYA programs as specified above.

*Source:* National Youth Administration for months subsequent to June 1939.

### Civilian Conservation Corps

*Enrollees:* Data represent averages computed from reports on numbers of persons enrolled on the 10th, 20th, and last day of each month except for the Indian Division for which averages are computed from daily reports.

*Amounts:* Data are estimated on the basis of average monthly enrollment and average monthly benefits of \$70 per enrollee for months prior to July 1939, of \$67 for the months July-October 1939, and of \$66.25 for subsequent months.

*Source:* Civilian Conservation Corps.

### Public Works Administration

*Employees:* Data represent average weekly employment during the month ending on the 15th of the specified calendar month on projects financed in whole or in part from PWA funds.

*Amounts:* Data represent total earnings shown on project payrolls ending within the monthly period noted above, for persons employed on the projects described above.

*Source:* Bureau of Labor Statistics, Division of Construction and Public Employment.

### Civil Works Program

*Employees:* Data represent aggregates of the maximum weekly numbers employed on Civil Works program projects in each state during the month.

*Amounts:* Data represent total monthly earnings of persons employed on Civil Works program projects estimated from weekly payroll reports.

### Other Federal Work and Construction Projects

*Employees:* Data represent average weekly employment during the month ending on the 15th of the specified calendar month on all work and construction projects financed in whole or in part from Federal funds other than those of CWA, WPA, PWA, NYA, and CCC. These include projects financed from RFC funds; from funds appropriated or allocated to agencies other than those specified, under the ERA Acts of 1935, 1936, 1937, 1938, and 1939; and from regular Federal appropriations, including Federal-aid highway grants.

*Amounts:* Data represent total earnings shown on project payrolls ending within the aforementioned monthly period, of persons employed on the Federal agency projects described above.

*Source:* Bureau of Labor Statistics, Division of Construction and Public Employment, with the exception of data for regular Federal construction projects for months prior to January 1936; the latter are partly estimated.

### Special Types of Public Assistance

*Recipients:* Data include recipients assisted from Federal, state, and local funds for programs administered under state plans approved by the Social Security Board; and from state and local funds for programs administered under state laws without Federal participation. Beginning with January 1940, data also include

recipients of hospitalization and/or burial only. Data on the number of recipients of old-age assistance and aid to the blind relate to the number of grants made under the program; in most states separate grants are made to each eligible individual, but in some states a single grant may cover the needs of two or more eligible individuals. For the aid to dependent children program, data represent the number of families receiving aid. During June 1940 programs for aid to dependent children were operating under state laws without Federal participation in Connecticut, Illinois, Iowa, Kentucky, Mississippi, Nevada, South Dakota, and Texas; programs for aid to the blind were operating under similar conditions in Illinois, Missouri, Nevada, and Pennsylvania. Kentucky has a state law for aid to the blind but data on the status of the program are not available.

*Amounts:* Data represent payments to recipients from Federal, state, and local funds for programs administered under state plans approved by the Social Security Board and from state and local funds for programs administered under state laws without Federal participation. Beginning January 1940 data include cost of hospitalization and burials.

*Source:* Division of Public Assistance Research, Social Security Board, with the exception of figures prior to 1936, which were jointly estimated by the Division of Public Assistance Research, Social Security Board, and the Division of Research, WPA.

## General Relief

*Recipients:* Data on the number of emergency relief cases represent the number of different families and single persons receiving work and direct relief during the month under the general relief program of state and local emergency relief administrations. From May 1933 to December 1935 a major portion of the cost of this program was financed with Federal funds granted to the states by the Federal Emergency Relief Administration. The estimated number of outdoor poor relief cases aided by local authorities during each month under provisions of the poor laws is shown separately for the period from 1933 through 1935; after 1935 this type of relief is included in the general relief figures. Data on nonrelief employees represent aggregates of the maximum weekly numbers employed on emergency work relief program projects in each state during the month. Beginning January 1940, data include cases receiving only hospitalization and/or burial. All general relief recipient totals are partly estimated for January through June 1933 and for January 1936 to date.

*Amounts:* Data represent obligations incurred during the month for relief extended to cases and earnings of nonrelief persons as described above, and beginning January 1940 also include the cost of hospitalization and burials.

*Source:* Division of Public Assistance Research, Social Security Board, for months subsequent to March 1937.

## Transient Relief (FERA)

*Recipients:* Data represent the estimated number of families and single persons receiving transient relief during the month from state and local emergency relief administrations. Beginning with September 1933, a major part of the cost of this program was financed with Federal funds granted to the states by the FERA.

*Amounts:* Data represent obligations incurred during the month from Federal, state, and local funds for transient relief extended to cases by state and local emergency relief administrations. Data for the first six months of 1933 and for months subsequent to June 1935 are partly estimated.

## Emergency Education (FERA)

*Employees:* Data represent the number of different persons employed on the emergency education program during the month.

*Amounts:* Data represent the obligations incurred during the month for earnings of persons employed on the program.

## College Student Aid (FERA)

*Employees:* Data represent the number of different students employed on the college student aid program during the month.

*Amounts:* Data represent obligations incurred during the month for earnings of students employed on the program.

## Rural Rehabilitation (FERA)

*Recipients:* Data represent the number of cases receiving advances for subsistence or capital goods during the month. Data are partly estimated for months beginning with July 1935, when this program was transferred to the Resettlement Administration.

*Amounts:* Data represent the amount of obligations incurred during the month for advances to cases specified above. Data for months beginning with July 1935 are partly estimated.

## Farm Security Administration Grants

*Recipients:* Data represent the net number of grant vouchers certified by the Farm Security Administration (formerly the Resettlement Administration). Ordinarily only one grant voucher is certified per month for a given case. Beginning in April 1938, the number of cases receiving grants in the form of commodities purchased by the Farm Security Administration is included.

*Amounts:* Data represent the net amount of grant vouchers certified during the month for subsistence payments to cases as described above. Also included are commodity grants made by the Farm Security Administration during the month.

*Source:* Farm Security Administration.

| XI. Amount of WPA and Sponsors' Funds Expended on Projects Operated by WPA, by Type of Project, by Source of Funds, and by Object of Expenditure, Year Ending June 30, 1940       | 125         |
| XII. Amount of WPA and Sponsors' Funds Expended on Projects Operated by WPA, by State, by Source of Funds, and by Object of Expenditure, Cumulative through June 30, 1940         | 126         |
| XIII. Amount of WPA and Sponsors' Funds Expended on Projects Operated by WPA, by State, by Source of Funds, and by Object of Expenditure, Year Ending June 30, 1940               | 127         |
| XIV. Amount of WPA and Sponsors' Funds Expended on Projects Operated by WPA, by State and by Major Type of Project, Cumulative through June 30, 1940                              | 128         |
| XV. Amount of WPA and Sponsors' Funds Expended on Projects Operated by WPA, by State and by Major Type of Project, Year Ending June 30, 1940                                      | 130         |
| XVI. Physical Accomplishments and Public Participation on Projects Operated by WPA, Cumulative through December 31, 1939                                                          | 132         |
| XVII. Selected Activities on Professional and Service Projects Operated by WPA, by State, Selected Periods                                                                        | 135         |
| XVIII. Selected Items of Physical Accomplishment on Construction Projects Operated by WPA, by State, Cumulative through December 31, 1939                                         | 136         |
| XIX. Number of Persons Employed on Federal Work and Construction Projects and Recipients of Public Relief, by State and by Program, June 1940                                     | 138         |
| XX. Amount of Earnings of Persons Employed on Federal Work and Construction Projects and Payments for Public Relief, by State and by Program, June 1940                           | 139         |

## EXPLANATORY NOTES

WPA statistics presented in this report relate to activities conducted under the program from its initiation in the summer of 1935 through June 30, 1940. The figures cover activities on all WPA projects financed in whole or in part with WPA funds. Most of these projects have been operated by the WPA itself, but in the period beginning with July 1938 a few have been operated by other Federal agencies with funds appropriated to the WPA and allocated to these agencies. Unless otherwise specified, all statistics presented in this report cover the continental United States and the territories of Alaska, Hawaii, Puerto Rico, and the Virgin Islands.

### Employment Statistics

WPA employment data shown in the first three tables of the appendix relate to persons employed on all WPA projects. Tables IV, V, and VII relate to employment on projects operated by the WPA itself, and Table VI relates only to employment on WPA projects operated by other Federal agencies. None of the figures shown in these tables include administrative employees or workers paid by project sponsors.

Monthly WPA employment figures have usually been used in both the appendix and the text tables except for certain items that were reported only for selected weeks. The monthly statistics are averages of the numbers employed on Wednesday of each week. The basic weekly figures are summarized for the United States in Table I of the appendix.

### Financial Statistics

Tables VIII and IX are based on reports of the Department of the Treasury and relate to Federal funds allocated or appropriated to the WPA under the ERA Acts of 1935, 1936, 1937, 1938, and 1939. Some of the terms used in these tables are defined in the following paragraphs.

1. "Allocations" represent amounts directly appropriated to the agency or ordered transferred to it, warrants for which have been issued by the Treasury.

2. "Obligations" represent actual or contingent liabilities incurred against funds allocated. The figures are cumulative and represent paid, as well as unpaid, obligations. Requisitions for materials, supplies, and equipment are set up as obligations. Items such as payrolls, rents, travel expenses, which are certain to become due in a short period, are obligated one period in advance.

3. "Expenditures" represent checks issued in payment of payrolls and other certified vouchers.

Neither obligations nor expenditures necessarily provide a wholly accurate measure of operations at any given time since obligations in part reflect future operations, and expenditures lag behind current operations because of the time consumed in making actual payments.

Tables X to XV, dealing with expenditures of WPA and sponsors' funds on projects operated by WPA, are based on data compiled from WPA project registers maintained by the WPA divisions of finance in the several states. Totals of WPA expenditures shown in these tables are in agreement with figures reported by the Treasury Department.

### Project Accomplishment Statistics

Tables XVI, XVII, and XVIII relate to the number of physical units of work that were completed on project operations from the beginning of WPA activities through December 1939 (through June 1940 on items of airport and airway work). The figures shown for certain types of professional and service projects, however, refer to the extent of public participation during specified periods in December 1939 and January 1940. The state data presented in Tables XVII and XVIII are limited to selected items of accomplishment.

### Federal Work Programs and Public Assistance Statistics

Two state tables—XIX and XX—supplement statistics presented in the text on the several work and public-assistance programs. A detailed explanation of the technical coverage of these figures is given on pages 104 to 109.

TABLE I—NUMBER OF PERSONS EMPLOYED ON WPA PROJECTS

WEEKLY, AUGUST 1935-JUNE 1940

| Month     | Year Ending<br>June 30, 1936 |                                | Year Ending<br>June 30, 1937 |                                | Year Ending<br>June 30, 1938 |                                | Year Ending June 30, 1939 |           |                                | Year Ending June 30, 1940                                      |      |           |                                |                                                                |

A Total allocations do not include \$9,884,290 of 1938 Act funds which continued to be available for obligation during the 1940 fiscal year through provisions of the 1939 Act; of this amount \$7,685,976 was available for projects operated by WPA and \$2,198,314 for other Federal agencies.

B WPA funds allocated for project and administrative expenses under sections 3 and 11 of the ERA Acts of 1938 and 1939, respectively.

C 1939 Act funds allocated to the National Resources Planning Board were transferred to the General Land Office of the Department of the Interior in January, 1940.

D For the use of the Bureau of Internal Revenue and the Division of Tax Research.

Source: U. S. Treasury Department report on the status of funds and analyses of expenditures under the ERA Acts of 1935, 1936, 1937, 1938, and 1939 as of June 30, 1940.

## APPENDIX

TABLE IX.—AMOUNT OF WPA FUNDS EXPENDED FOR ACTIVITIES CONDUCTED BY WPA AND OTHER FEDERAL AGENCIES, BY STATE AND BY FISCAL YEAR

THROUGH JUNE 30, 1940
